**Detroit United Ry.**—The draft contract for the purchase of the lines of the Detroit United Ry. in Detroit, by the City Council, has been approved of the Board of Street Railway Commissioners for Michigan, and was considered by the directors of the company Aug. 2. The agreement is to be finally ratified by a three-fifths majority of the ratepayers, and possession of the property is to be given at once. If possession is not given the city may within 60 days institute suit for specific performance, possession to be given within 30 days thereafter. The purchase price, which is to be paid out of earnings, is to be fixed by the circuit judge of Wayne County. The city will assume the mortgage debt of the company to the amount of the purchase price, and will pay off the balance, if any, of the mortgage indebtedness, pledging for this purpose two per cent. of the assessed value of the city. The first mortgage on the railway is due 1916, but the great bulk of the indebtedness is not due until 1932.

**Montreal Tramways Co.**—Press reports state that the company is preparing to issue a further \$1,000,000 of common stock at par to existing holders.

# Mainly About Railway People Throughout Canada.

George Bury, Vice President C.P.R., returned to Montreal August 1, after a tour of inspection of the company's western lines.

W. R. Butler, who has been Professor of Civil Engineering at the Royal Military College, Kingston, Ont., for the past eighteen years, has retired.

J. H. O'Dowd, who has been connected with the management of the C.P.R. Chateau Frontenac for twelve years, latterly as assistant manager, has resigned.

Lieut. R. Baker, who is with the 11th C. M.R. at Vernon B.C., and who is leaving shortly for the front, is a son of R. P. Baker, Paymaster, C.P.R., Vancouver, B.C.

D. R. McLellan, station agent, Halifax and Southwestern Ry., Shelburne, N. S., was killed there, Aug. 9, in removing a negro, who was taking a free ride, from the train.

S. Devlin, foreman, C. P. R. freight sheds, Guelph, Ont., died there suddenly from heart failure, Aug. 12. He had been stationed at Guelph for 30 years.

Hon. F. Cochrane, Minister of Railways and Canals, returned to Ottawa at the end of July after an extensive inspection tour of the Government railways in the Maritime Provinces.

S. C. Long, General Manager, Operating Department, Pennsylvania Rd., Philadelphia, Pa., visited Winnipeg, Aug. 8, on his return home from the Panama-Pacific Exposition at San Francisco.

G. H. Ham, of the C.P.R. head office staff, was entertained to dinner at Montreal, Aug. 23, by a number of old friends and associates, of the C.P.R., in honor of his 68th birthday.

Davidson & McRae, financial agents, who were connected with a number of enterprises closely allied to the Canadian Northern Ry., have dissolved partnership, A. D. McRae having withdrawn.

N. P. Dalziel, formerly of Mackenzie, Mann & Co.'s engineering staff Toronto, and latterly on their Comptroller's staff there, has resigned to undertake duties in the British War Office's service in Canada.

W. N. Riggs, baggage master, Prince Edward Island Ry., Charlottetown, P.E.I., died there July 21, after a short illness. He was born at Charlottetown, Dec. 11, 1847, and entered P.E.I.R. service Oct. 19, 1891.

T. C. Chalmers, station agent, G. T. Pacific Ry., Prince Rupert, B. C., has enlisted for active service in the transport section of the Canadian Expeditionary Force, and will leave for Europe shortly.

L. A. Roberge, who died at St. Lambert, Que., Aug. 12, aged 77, was interested in railway construction some years ago, and built the railway which used to run on the ice between Montreal and Longueuil.

W. A. Moore, local manager, Canada Railway News Co., Stratford, Ont., died there, Aug. 18, aged 54, after an illness lasting five weeks. He had occupied the position for 30 years, and was well known throughout the G.T.R. system.

E. H. Williams, Locomotive Foreman, Canadian Northern Ry., Brandon, Man., whose birthday occurred Aug. 26, was, through a typographical error, mentioned in our last issue as having been born in 1844, instead of 1884.

T. H. Roberts, who died at Walkerville, Ont., July 22, aged 71, was born in County Meath, Ireland, and came to Canada in 1868, when he entered G.T.R. service. He was subsequently appointed Mechanical

Superintendent of the Detroit Branch, G.T.R., which position he held on his retirement from active service in 1897.

W. R. Smith, Superintendent Great Northern Ry., Everett, Wash., spent a portion of his annual holiday in Ontario, and returned west Aug. 3. About eighteen years ago he was in C.P.R. service as a freight brakeman.

Mrs. C. P. Mullins, who died at Toronto, Aug. 22, was mother of W. E. Mullins, General Manager, Costa Rica Division, United Fruit Co., San Jose, and formerly of the G. T.R., and of T. Mullins, City Passenger Agent, C.P.R., Ottawa.

Capt. Jas. Turnbull, of the C. P. R. s. s. Empress of Britain, who was given the temporary rank of Commander, R. N. R., when the Admiralty took over the vessel at the commencement of the war, has been promoted to Commander on the active list, in charge of a patrol flotilla.

8429.  
L. C. Fritch,  
General Manager, Eastern Lines, and Assistant  
to the President, Canadian Northern Railway.

J. M. Cameron, who was recently appointed General Superintendent, Alberta Division, C.P.R., Calgary, removed his family there early in August from Vancouver, B.C., where he was formerly stationed as Assistant General Superintendent of the British Columbia Division.

H. Foster Chaffee, formerly Passenger Traffic Manager, Canada Steamship Lines, Limited, has been elected an honorary member of the American Association of Passenger Traffic Officers. H. G. Elliott, formerly General Passenger Agent, G.T.R., has been nominated for honorary membership in the association.

H. T. Meldrum, Secretary, Canadian Manufacturers Association, Montreal branch, has resigned and gone to London, Eng. It is said that he has been given an appointment in connection with purchasing war supplies for the Allies, which is being carried on under E. Fitzgerald, Assistant General Purchasing Agent, C.P.R., who is devoting his whole time to War Office service.

F. M. Spaidal, General Superintendent Quebec Grand Division, Canadian Northern Ry., Montreal, who has been off duty for some months on account of illness, during which he underwent an operation, and who has been at Lake Edward, Que., lately, has returned to Montreal, where he is seriously ill.

Thos. Henry, Passenger Traffic Manager, Canada Steamship Lines; J. F. Pierce, General Passenger Agent, Canada Steamship Lines; A. C. Shaw, General Passenger Agent, Western Lines, C.P.R., and W. H. Snell, General Passenger Agent, Eastern Lines, C.P.R., have been elected members of the American Association of Passenger Traffic Officers.

F. P. Brady, General Superintendent, National Transcontinental Ry., Quebec to Winnipeg, has bought a house, 308 Oxford St., Winnipeg, and has removed his family there from Moncton, N. B. His office for the present remains at Cochrane, Ont., but he also has an office in the Union Station, Winnipeg, and it is possible that his headquarters will be removed there.

Lieut.-Colonel A. E. Hodgins, who is organizing a body of men with railway construction and general mechanical experience in British Columbia, for active service in Europe, was, until his resignation in 1907, Division Engineer on Construction, National Transcontinental Ry., Kenora, Ont., and has latterly been connected with the British Columbia Public Works Department.

Sir William Van Horne, K.C.M.G., underwent a serious operation for an abdominal abscess at the Royal Victoria Hospital, Montreal, on Aug. 23, at 2.30 a.m., the operating surgeons being Doctors Armstrong and Hamilton, who issued a bulletin that he had stood the operation very well. Sir William was born in Will County, Illinois, Feb., 1843, and first came to Canada as General Manager, Canadian Pacific Ry. in Dec., 1881.

Henry S. Hawley, President of the Railroad Supply Co., Chicago, Ill., who died at Saunderson, R.I., towards the end of July, was born at Bridgeport, Conn., Aug. 12, 1851, was engaged for some years in railway contracting, and built a section of the G.T.R. from Valparaiso, Ind., to Thornton, Ill., and later purchased the Chicago and Southern Rd., which is now owned by the Chicago and Grand Trunk Ry.

Sir Percy Girouard, who, at the commencement of the war, resigned his position as one of the Managing Directors of Armstrong Whitworth & Co., in order to place his services at the disposal of the British Government in connection with the organization of the supply of munitions, has resumed his former position, the organization having been completed. His firm is the largest manufacturer of munitions in Great Britain.

William G. Connolly, whose appointment as City Passenger and Ticket Agent, G. T. Pacific Ry., Vancouver, B.C., was announced in our last issue, was born at McAdam Jct., N.B., May 28, 1889, and entered railway service July 1, 1906, stenographer and ticket clerk, G.T.R., Ottawa, Ont.; March 9, 1909, to June 1, 1910, ticket clerk, G.T.R., Montreal; June 1, 1910, to June 1, 1915, Assistant City Passenger and Ticket Agent, G.T. Pacific Ry., Vancouver, B.C.

Frederick Ernest Whelpley, who has been appointed Assistant Treasurer, Canadian Government Railways, Moncton, N.B., was born at St. John, N.B., Aug. 20, 1861, and entered transportation service May 1, 1893,

since when he has been, to Dec. 1, 1893, clerk, Hamburg-American Steamship Co., Montreal; Dec. 1, 1893 to May 1, 1903, outward freight clerk, Dock Department, some company, Hoboken, N.J.; May 1, 1903 to June 1, 1915, cashier, Canadian Government Railways, Moncton, N.B.

**Fred Carey**, who has been appointed Master Mechanic, Division 2, Intercolonial Ry., Campbellton, N.B., was born at Painsse Jct., N.B., Oct. 18, 1878, and entered I.C.R. service Sept. 1, 1893, since when he has been, to March 4, 1901, clerk in the Traffic Auditor's Office, Moncton, N.B.; March 4, 1901, to Oct. 7, 1910, locomotive fireman, Moncton, N.B.; Oct. 7, 1910, to May 1, 1912, Night Roundhouse Foreman, Moncton, N.B.; May 1, 1912, to May 19, 1915, locomotive driver, Moncton, N.B.; May 19 to July 19, 1915, Acting Master Mechanic, Division 3, Moncton, N.B.

**J. G. Thomson**, who has been appointed Commercial Agent, Chicago, Milwaukee & St. Paul Ry., Victoria, B.C., was born in Galt, Ont., and entered railway service with the C.P.R. at Chicago, Ill., where he remained fifteen years. He then moved to Winnipeg, representing the Minneapolis, St. Paul & Sault Ste. Marie Ry. there, and was later in West Shore Rd. service in New York. Eight years ago he entered Chicago, Milwaukee & St. Paul Ry. service, and for four years was travelling Passenger Agent at St. Paul, Minn., leaving there four years ago for Seattle, Wash., where he was engaged in advertising and publicity work for the company.

**A. D. Provand**, who died at Edinburgh, Scotland, recently, aged 76, will be remembered as the representative of the trustees of the bondholders of the Chignecto Marine Transport Ry. Co., who visited Ottawa frequently of recent years in the interests of the project. The object of the company was to build a railway for the transport of vessels across the isthmus dividing the Bay of Fundy from the Northumberland Strait in Nova Scotia. The Dominion Government in 1899 refused to grant any further extension of time for the carrying out of the project on which, it was claimed, some \$4,000,000 had been spent.

**William Cuthbertson**, General Assistant to the European Traffic Manager, G.T.R., Liverpool, England, died at his home July 12, and was buried at Birkenhead July 15, the funeral being attended by F. C. Salter, European Traffic Manager, G.T.R., London, and a representative from each of the various G.T.R. staffs throughout the United Kingdom. He was born at Caerla-verock, Scotland, March 8, 1851, and served on the Caledonian Ry. in Scotland, and the London and North Western Ry. at Liverpool. He entered the service of the Canadian Express Co. in Liverpool, May 19, 1873, and he was agent of that company when it was taken over by the G.T.R. He had held the position of General Assistant, G.T.R., for some time prior to his death.

**Charles Samuel Moss, A. M. Can. Soc. C. E.**, who has been appointed Resident Engineer, Maintenance of Way, C. P. R., Moose Jaw, Sask., was born at Toronto, Dec. 17, 1865, and entered C. P. R. service in 1891, since when he has been, to 1894, rodman on survey and construction in British Columbia; 1894 to 1897, instrument man in West Kootenay, B. C.; 1897 to 1898, Resident Engineer on construction, West Kootenay, B. C.; 1898 to 1899, instrument man, West Kootenay, B. C.; 1899 to 1900, instrument man, in Western Ontario; 1900 to 1903, Resident Engineer on construction, Vancouver, B. C.; 1903 to 1905, transit man, Maintenance of Way, Revelstoke, B. C.; 1905 to 1906, Assistant Engineer on Construction, Spence's

Bridge, B. C.; 1906 to 1912, Resident Engineer, Maintenance of Way, Nelson, B. C.; 1912 to May 1915, Assistant Engineer of Double Track, Kamloops, B. C.; May to July 1915, Assistant Engineer, Maintenance of Way, Nelson, B. C.

**Louis Charlton Fritch**, Assistant to the President, Canadian Northern Ry., Toronto, who has also been appointed General Manager, Eastern Lines, was born at Springfield, Ill., Aug. 11, 1869, and took a course in civil engineering at the University of Cincinnati, and subsequently a law course, and was admitted to the bar in Ohio. He entered railway service in 1884, as supervisor's assistant, Ohio and Mississippi Ry., and was, from Jan. 1, 1886 to Oct. 1892, Assistant Engineer, same road; Oct. 1892 to Nov. 1, 1893, Engineer Maintenance of Way, same road; and was also Chief Engineer in charge of construction, Cincinnati and Bedford Ry.; Nov. 1, 1893 to Sept. 1, 1899, Division Engineer, Baltimore and Ohio Southwestern Rd., which absorbed the Ohio and Mississippi Ry.; Sept. 1, 1899 to Nov. 1902, Superintendent, Mississippi Division, same road; Feb. 1904

**The Late J. W. Eber.**

to Mar. 1, 1905, engaged on special work, Illinois Central Rd., Chicago, Ill.; Mar. 1, 1905 to Nov. 1906, Assistant to General Manager, same road; Nov. 1906 to Mar. 1, 1909, Assistant to President, same road; Mar. 1 to Nov. 15, 1909, Consulting Engineer, same road; Nov. 15, 1909 to Mar. 31, 1914, Chief Engineer, Chicago Great Western Rd., Chicago, Ill., since which latter date he has been Assistant to the President, Canadian Northern Ry., Toronto. He is a member of the American Society of Civil Engineers, American Institute of Electrical Engineers, American Railway Engineering Association, American Association for the Advancement of Science, Western Society of Engineers and the Geographical Society. He was President of the American Railway Engineering Association in 1910, a director from 1905 to 1913, and a member of the rail committee in 1913; a member of the railway committee of the American Institute of Electrical Engineers from 1910 to 1913; chairman of the committee on engineering of the American Railway Association in 1913; a member of the committee on electrical working, of the American Railway Associa-

tion from 1910 to 1913, and a member of the committee on electricity of the American Railway Engineering Association from 1910 to 1913.

### Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,594,300	\$1,163,800	\$430,500	x \$83,000
Aug.	1,367,700	1,123,000	244,700	x 163,000
Sept.	2,109,900	1,519,900	590,700	65,800
Oct.	1,895,300	1,332,100	563,200	x440,900
Nov.	1,670,200	1,123,100	547,100	x417,700
Dec.	1,329,100	908,000	423,100	200,900
Jan.	950,800	773,000	177,800	x175,100
Feb.	1,105,100	823,700	281,400	42,800
Mar.	1,379,000	956,000	423,000	62,600
Apr.	1,429,000	940,000	489,000	74,800
May	1,193,900	871,000	322,900	x158,700
June	1,201,300	866,000	335,300	x128,000
	\$17,225,600	\$12,396,900	\$4,828,700	\$1,523,000
Decr.	\$5,475,100	\$3,952,100	\$1,523,000	x Decrease.

Approximate earnings for July, \$1,156,190 against \$1,594,300 for July, 1914, and for two weeks ended Aug. 14, \$508,900 against \$673,900 for same period, 1914.

### Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$10,481,211.77	\$6,708,327.89	\$3,772,883.88	\$338,347.35
Aug.	8,917,764.38	6,554,606.65	3,373,157.70	597,981.54
Sept.	11,111,000.00	6,337,091.28	4,773,908.72	48,580.30

\$98,865,209.78 \$65,209,582.49 \$33,574,627.29 x\$8,851,300.39  
Dec. \$30,949,614.05 \$22,098,313.66 \$8,851,300.39  
xDecrease.

### Grand Trunk Railway Earnings, Etc.

The following figures show the earnings for the G.T.R. (including the Canada Atlantic Ry.), the G.T.W.R. and the D.G.H. & M.R. for July:

	1915	1914	Incr	Decr.
G.T.R.	\$22,122,925	\$24,243,868		\$2,120,943
G.T.W.R.	4,115,617	4,064,487	\$51,130	
D.G.H. & M.R.	1,458,091	1,399,721	58,370	

Totals ..... \$27,691,633 \$29,708,076 ..... 2,016,443  
Approximate earnings for two weeks ended Aug. 14, \$1,998,185, against \$2,175,533 for same period 1914.

### Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section, 916 miles, for July, were \$221,507 against \$343,987 for July, 1914. The earnings which have hitherto been published were for the Prairie Section and the Lake Superior Branch, but as the Lake Superior Branch is now being operated by Canadian Government Railways the earnings from its operation are not now quoted.

**Canadian Northern Ontario Ry. Contractors' Suit Settled.**—A settlement has been effected between Foley Bros., Patrick Welch and J. W. Stewart, trading as Foley, Welch and Stewart, against the C.N.O. Ry., and Mackenzie, Mann & Co., Ltd., arising out of the construction of the Ruel-Port Arthur section of the company's line. The terms of the settlement were not made known at the time the action was dismissed by consent.

**M. B. Douglas**, heretofore local manager, Great North Western Telegraph Co., North Bay, Ont., has been appointed local manager at St. Catharines, Ont., vice T. E. Dudley, resigned.

The Great North Western Telegraph Co. has not closed its office at Neepawa, Man., as announced in our last issue owing to incorrect advice.

## Canadian Northern Railway Construction, Betterments. Etc.

**Montreal-Ottawa-Port Arthur Line.**—We are officially advised that the section of the line between Ruel and Port Arthur, Ont., is receiving the finishing touches, and that it is expected to start a regular freight service over it early in September. This will enable the company to operate through freight traffic from Quebec, via Montreal, Ottawa, and Toronto, to Port Arthur, Winnipeg and all other points on the Canadian Northern Ry. The short line from Montreal to Hawkesbury, and the line from Ottawa to North Bay are not fully completed. These sections form part of the Montreal-Ottawa-Port Arthur line for the building of which the Dominion Parliament and the Ontario Legislature made special provisions.

A through freight reached Winnipeg from Toronto, July 29.

**Canadian Northern Ontario Ry.**—In connection with the company's application to the Board of Railway Commissioners for approval of a project for car ferry terminals at Cherry St., Toronto, we are officially advised that the plans for the same have not been completed. The company does not expect to be able to do anything further in this matter in the immediate future.

Orders have been given for building three frame constructed 100-ton capacity standard counter balanced bucket coaling plants at Rideau Jct., Capreol and Fitzbach, Ont. They will be similar to the plant erected at Trenton, Ont., which was described and illustrated in Canadian Railway and Marine World for June.

**Canadian Northern Ry.**—The new agreement between the Port Arthur, Ont., city council and the company, to replace the one disapproved of by the ratepayers at the municipal elections in January, was practically settled, Aug. 13. The subject matter of the agreement has to do with the transfer of Dock 5 to the city.

We are officially advised that the company is adding two miles of track in the yards at Port Arthur and Fort William, Ont.; and is putting in new sidings and extending the yards at various points on the line between Port Arthur and Winnipeg.

The line from Winnipeg to Grand Marais, Man., is, we are officially advised, being extended to Victoria Beach, 15 miles. The grading, bridging and track laying are to be completed this year. J. H. Higgins, Winnipeg, is the contractor.

Westerly from Winnipeg the company is ballasting about 120 miles of main line, and a considerable mileage on branch lines. About 80 miles of the main line west of Kam-sack, Sask., is being relaid with 80 lb. steel; considerable filling in is being done on trestle work, and two miles of bridge decks are being awarded west of Dauphin, Man.

The Thunderhill branch extends from Thunderhill Jct., Man., to Preeceville, Sask., 72 miles, and is being extended beyond that point. The grading on a line from Canora to connect with the Thunderhill branch at Sturgis, two miles east of Preeceville, 21 miles, was completed in 1914. The track laying and ballasting is, we are officially advised, to be completed this season.

The grading of a branch line from Wroxton, Sask., mileage 227 from Winnipeg, via the Neepawa-Russell-Ross Jct. line, into Yorkton, Sask., 26 miles, was completed in 1914, and we are officially advised that track will be laid and ballasting completed during this year.

The company has in operation a line from Delisle to Tichfield, Sask., which is projected easterly to Findlater on the Regina branch, and is in operation from Tichfield westerly

to Elrose, about 40 miles. The branch is projected to be extended towards Edmonton, a further distance of about 250 miles. On this grading was completed for 35 miles to Easton, on which, we are advised, tracklaying and ballasting will be completed this season. The Cowan Construction Co. is grading a further distance of 30 miles.

Track will also be laid this year, and ballasting done, we are advised, on the extension from Bienfail to Estevan, Sask., 9 miles, which was graded in 1914.

The projected line from Calgary to MacLeod, Alberta, is 103 miles long. About 17 miles of grading was completed in 1914, and we are officially advised that it is expected to complete the grading this year. It has not been decided whether any track will be laid this year. The grading is being done by the Northern Construction Co.

A line is under construction from Edmonton south easterly, and is already completed to Camrose, 47 miles. An additional 60 miles of grading has been completed to Battle River, but it has not been decided whether track will be laid this year.

On the line under construction from Oliver to St. Paul de Metis, Alberta, 110 miles, D. F. McArthur has the contract for grading 75 miles, which it is expected will be completed this year. The question of laying steel on this line this year has not been decided.

Automatic locomotive coaling plants of 200 tons capacity each are to be built at Kindersley, Sask., and Big Valley, Alta.

**Canadian Northern Pacific Ry.**—M. H. MacLeod, Chief Engineer and General Manager, returned to Winnipeg, Aug. 1, from a trip of inspection as far as the Albreda Summit, B. C. He is reported to have stated that ballasting and other finishing up work on the line from the Alberta-British Columbia boundary to the Summit was expected to be completed by Sept. 1.

F. C. Gamble, Chief Engineer, British Columbia Department of Railways, in a late report to the Government, states that the line is fully completed from the bridge at New Westminster to mileage 190; the portion between mileage 190 and 245 was expected to be fully ballasted and completed by the end of August. From Kamloops, mileage 245, the line had been completed for 125 miles northerly, with the exception of a second lift of ballast on 15 miles. The ballasting on the remainder of the line to mileage 413 was expected to be completed in September; thence to the British Columbia-Alberta boundary the line was completed. The buildings at the divisional and terminal points were all being gone on with, and the stations at intermediate points were being built. All the bridge structures had been completed, but after the line is opened three temporary bridges across the Thompson River, beyond mileage 316 will be replaced by permanent steel structures.

We are officially advised that division yards have been located at Port Mann, mileage 4; Boston Bar, mileage 118; Kamloops, mileage 244; Blue River, mileage 383; and Lucerne, mileage 494, all from New Westminster bridge. At Port Mann, there has been erected a 15-stall locomotive house, a 60 ft. turntable, large machine shop, two large boarding houses, an 80,000 gal. steel tank and other buildings. At Lucerne there are 10-stall locomotive house, and other buildings; at Boston Bar, Kamloops and Blue River it is contemplated to put up 5-stall locomotive houses and other necessary buildings, this year, the work on some of which is being done. All the division yards are being laid out with a view to future de-

velopments, sufficient trackage being laid for present purposes, but so as to permit of additions on previously arranged plans. Six station buildings, viz., at Langley, mileage 14.7; Matsqui, mileage 30.5; Sumas, mileage 35.9; Arnold, mileage 41.4; Rosedale, mileage 52.7 and Laidlaw, mileage 63.2, are in course of erection. The work is being done by the company's own staff.

**False Creek Terminals, Vancouver.**—The company's officials have made a protest to the Vancouver City Council against the city's plans for the seawall at False Creek flats. The question is whether the plans, which provide for slips, are in accordance with the terms of the agreement. (Aug., pg. 311.)

## Dominion Government Railway to Hudson Bay.

A weekly accommodation train is being operated on the Dominion Government Railway to Hudson Bay from Pas, Man., to the bridge at Armstrong Lake, 210 miles. The line has only been completely ballasted for the first 90 miles from Pas, and ballasting is in progress along the remaining 120 miles. Grading is fully completed to the Manitou Rapids on Nelson River, 15 miles from Armstrong Lake. Track is expected to be laid to the Nelson River during September. The substructure of the bridge is being put in, and it is expected that the bridge will be completed by Dec. 31. It will be of cantilever construction, the main span being 600 ft. Grading is practically finished for the next 50 miles to Kettle Rapids on the Nelson River, where another cantilever bridge will be erected next spring. Tracklaying will be started on this section next spring. Beyond the Kettle Rapids grading is in progress, and it is expected to have it fully completed to within 40 miles of Port Nelson by the end of the year.

At Port Nelson a short narrow gauge railway has been built southerly to bring in sand and gravel for use in making concrete and in filling the cribwork of the docks which are being built. W. E. Hawes is in charge of the dock construction work at Port Nelson. It is said that as soon as the wharves and docks are completed a grain elevator will be built. Three dredges are deepening the approaches to the harbor. (Aug., pg. 304.)

**Canadian Freight Association, Western Lines.**—At the thirteenth annual meeting at Winnipeg, Aug. 5, the following officers and standing committees were elected for the current year.—President, A. E. Rosevear, General Freight Agent, Grand Trunk Pacific Ry.; Vice President, W. C. Bowles, General Freight Agent, C. P. R.; Executive Committee, A. E. Rosevear, W. C. Bowles and G. Stephens; Inspection Committee, W. G. Manders, G. H. Smith, F. R. Porter and P. H. Burnham; Car Service Committee, H. J. Humphrey, J. P. Driscoll, T. P. White, W. B. Harris and G. P. Clarke; Weighing Committee, W. C. Bowles, O. C. Walker, G. Stephen, J. P. Driscoll, A. E. Rosevear and F. R. Porter; Classification Committee, W. B. Lanigan, G. Stephen, A. E. Rosevear, W. G. Manders, F. R. Porter, P. H. Burnham and W. C. Bowles. The Secretary-Treasurer is W. E. Campbell.

**Cascade Scenic Ry., Banff, Alberta.**—We are officially advised that the surveys for this projected railway are still in progress, and that, until all the data are obtained, it is impossible to decide finally on the details of construction. T. R. Deacon, Winnipeg, is interested in the project, and H. S. Johnson is in charge of the surveys. (April, pg. 137.)

# Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, Telegraph, and Railway and  
Canal Contractors' Interests.  
Official Organ of the various Canadian  
Transportation Associations.  
Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors,  
70 Bond Street, Toronto, Canada.

ACTON BURROWS, A. Can. Soc. C. E.,  
Managing Director and Editor-in-Chief.  
AUBREY ACTON BURROWS - Secretary and  
Business Manager.

Associate Editor - JOHN KEIR  
Associate Editor - DONALD F. KEIR  
Mechanical Editor - FREDERICK H. MOODY, B.A.Sc.

Canadian Business Representative - W. H. HEWITT  
70 Bond Street, Toronto

United States Business Representative, A. FENTON WALKER  
143 Liberty Street, New York, N.Y.

European Business Representative - J. MEREDITH MCKIM  
16 Regent St., London, S.W., Eng.

Authorized by the Postmaster General for  
Canada, for transmission as second class mat-  
ter.

Entered as second class matter, July 25, 1913,  
at the Postoffice at Buffalo, N.Y., under the  
Act of Congress of March 3, 1879.

SUBSCRIPTION PRICE, including postage  
anywhere, \$2 a year.

SINGLE COPIES, 20 cents each, including  
postage.

The best and safest way to remit is by express  
money order. Where one cannot be obtained, a  
post office money order, or bank draft, payable  
at par in Toronto, may be sent. Cheques or  
drafts not payable at par in Toronto cannot be  
accepted. Remittances should be made payable  
to Canadian Railway and Marine World.

## Canadian Pacific Railway Construction, Betterments, Etc.

**British Columbia Division.**—A press report states that a heavy rock slide covered a portion of the C. P. R. tracks near Golden, B. C., Aug. 3, and that as engineers reported there was no prospect of clearing the slide, a temporary track was built over the debris, and will, it is said, be made into a permanent one. (Aug., pg. 303.)

**Extension from Foremost East.**—On what is known as the Weyburn-Lethbridge branch from Weyburn, Sask., to Lethbridge, Alta., the line is in operation at the west end from Lethbridge to Stirling, 18.9 miles, and from Stirling east to Foremost, 49.2 miles, a total of 68.1 miles. In 1914 an extension was graded easterly from Foremost for 25 miles to Pakowki. As a result of Vice President Bury's inspection trip in the west recently and a subsequent trip made over the route of the extension by Vice President and General Manager Grant Hall, and Chief Engineer Sullivan, it has been decided to lay rails on the 25 mile extension at once. The work will be done by the company's own forces and is expected to be completed by Oct. 1.

## Great Northern Railway Lines in Canada.

**Kootenai Valley Ry.**—Some years ago the Great Northern Ry. built a line under this title from Bonners Ferry, Idaho, to the International boundary at Porthill, and subsequently extended the line into Canada under the title of the Bedlington and Nelson Ry. The line was laid out to cross the C. P. R. at Creston Jct., and touch it again near Sirdar, and then reach Kootenay Lake at Kuskanoek, B. C., from which point a steamboat service was to be operated to Nelson, making connection there with a branch of the Great Northern Ry., running from Marcus, Wash. The line as finally built and operated extended from the International Boundary to Creston, and from Sirdar Jct., to Kuskanoek, 15.20 miles, running rights being arranged for over the C. P. R. between Creston and Sirdar Jct., 8.7 miles. The line was operated with varying success from 1901 until about two years ago, when it was closed up. G. N. R. workmen are now reported to be dismantling the line and removing all usable material to Bonner's Ferry. The right of way mantling the line and removing all usable is reported to have been acquired by the British Columbia Government, for highway purposes.

**Vancouver Terminals.**—We are officially advised that the company's engineers are preparing plans for the passenger station and other terminal facilities at the projected terminals at False Creek, Vancouver. As soon as they have been prepared they will be submitted to the Board of Railway Commissioners for approval. (Aug., pg. 308.)

## Toronto Terminal Railway Company's Union Station.

An Ottawa press report, Aug. 10, stated that the basis of an arrangement had been reached between the Dominion Government and the Toronto Terminal Railway Co., under which the Government will bear the cost of the eastern wing of the new building. This wing will contain the Government offices and the section to be devoted to post office purposes. This is said to be the last obstacle, except the financial one, to the prosecution of the actual work of construction. The financial situation is reported to have been eased by an arrangement with the Bank of Montreal, by which advances up

to \$4,000,000 will be made on account of the work. The contract for the larger portion of the work was let last year to the P. Lyall Construction Co.

The viaduct work from near Bathurst St. to Cherry St., while not a part of the new station building project, hinges considerably on it. Whether the two works will be gone on with concurrently has apparently not been decided.

**North Toronto Station, Canadian Pacific Ry.** In the article on this station in Canadian Railway and Marine World for August, B. Ripley, M. Can. Soc. C. E., Engineer of Grade Separation, C. P. R. should have been mentioned as having charge of the track elevation work, which includes extensive baggage room and midway construction under the tracks. The contractors for this work were Wells & Gray Limited, Toronto.

**Ottawa Car Manufacturing Co., Ltd.**—W. M. Arnold, heretofore Assistant General Manager, has been appointed Manager, and Purchasing Agent, and W. K. Jeffrey, heretofore General Manager, has been appointed General Superintendent.

## ASSISTANT ENGINEERING EDITOR

wanted for Canadian Railway and Marine World during the absence of its Engineering Editor on active military service.

Must be competent to write on both mechanical and civil engineering, to do draughting and take photographs for illustration purposes.

State fully experience, age, references and pay expected to Managing Director, Canadian Railway and Marine World, 70 Bond Street, Toronto, Canada.

## Department of Railways and Canals

Car Ferry Terminal, Carleton Point,  
Prince Edward Island.

## NOTICE TO CONTRACTORS

STATION, WATER TANK, ENGINE HOUSE,  
ETC.

**SEALED TENDERS**, addressed to the undersigned and endorsed "Tender for Station, Water tank, etc., Carleton Point." will be received at this office until 12 o'clock noon on Wednesday, September 8th, 1915, for the construction of station, water tank, engine house, transfer platform, standpipe pit, ashpit and turntable foundations for the Carleton Point Car Ferry Terminal, Prince Edward Island.

Plans, specifications and form of contract may be seen at the offices of, and forms of tender obtained from, the Chief Engineer, Department of Railways and Canals, Ottawa, the Chief Engineer, Canadian Government Railways, Moncton, N.B., and the Engineer in charge, Car Ferry Terminals, Carleton Point, P.E.I.

An accepted bank cheque for the sum of \$1,500.00, made payable to the order of the Minister of Railways and Canals, must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract for the work at the rates stated in the offer submitted.

The cheque thus sent in will be returned to the respective contractors whose tenders are not accepted.

The cheque of the successful tenderer will be held as security, or part security, for the due fulfilment of the contract to be entered into.

The lowest or any tender not necessarily accepted.

By order,  
J. W. PUGSLEY,  
Secretary.

Department of Railways and Canals,  
Ottawa, August 17th, 1915.

Newspapers inserting this advertisement without authority from the Department will not be paid for it.—84408. 6363

## Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**Canadian Government Railways.**—B. A. DUBROFF, heretofore chief clerk to the Comptroller and Treasurer, has been appointed Assistant to the Comptroller and not Assistant to the Comptroller and Treasurer, as announced in our last issue. Office, Moncton, N.B.

F. E. WHELPLEY, heretofore Cashier, has been appointed Assistant Treasurer, as reported in our last issue. It is not the present intention to appoint a successor to his former position. Office, Moncton, N.B.

See also Intercolonial Ry. and National Transcontinental Ry.

**Canadian Northern Ry.**—L. C. FRITCH has been appointed General Manager of all lines east of Port Arthur, Ont. He also continues in his duties as Assistant to President. Office, Toronto. The circular announcing this appointment was issued by D. B. Hanna, Third Vice President, and approved by Sir Wm. Mackenzie, President.

T. C. HUDSON, Division Master Mechanic, Quebec Grand Division, has had his jurisdiction extended over the Car Department, Quebec Grand Division. Office, Joliette, Que.

H. J. WHITE, heretofore General Foreman, Car Department, Quebec Grand Division, Joliette, Que., has been appointed Supervisor of Car Work on all lines east of Port Arthur, Ont. Office, Toronto.

J. H. McALPINE, heretofore Locomotive Foreman, Winnipeg, has been appointed Master Mechanic, with jurisdiction over territory between Parry Sound, Port Arthur and Cedar Lake, Ont. Office, Parry Sound, Ont.

Other appointments appear on another page, showing changes in Canadian Northern Ry., Ontario Division organization.

**Canadian Pacific Railway.**—T. G. CONNON, heretofore Chief Dispatcher and Car Accountant, British Columbia Electric Ry., Vancouver, B.C., has been appointed Agent, C.P.R., Windsor, Ont., vice F. T. Leversuch, resigned to enter London and Port Stanley Ry. service.

G. J. FOX, heretofore General Yardmaster, Swift Current, Sask., has been appointed General Yardmaster, Fort William, Ont., vice Donald McDonald, assigned to other duties.

S. J. BERRINGER, heretofore Yardmaster, Kenora, Ont., has been appointed yard foreman, Fort William, Ont.

DONALD McDONALD, heretofore General Yardmaster, Fort William, Ont., has been appointed yard foreman there.

J. J. McGUIRE, heretofore chief clerk, Royal Alexandra Hotel, Winnipeg, is reported to have been appointed Manager, vice W. Detlor, appointed Manager, Chateau Frontenac, Quebec.

C. S. MOSS, heretofore Engineer of Grade Revision, Kamloops, B.C., has been appointed Resident Engineer, District 2, Saskatchewan Division, vice J. V. McNab. Office, Moose Jaw.

J. H. BAKER, heretofore Roadmaster, Kenora, Ont., has been appointed Roadmaster at Medicine Hat, Alta., vice H. O. Whitney, who has left the service.

J. V. McNAB, heretofore Resident Engineer, Moose Jaw, Sask., has been appointed Roadmaster, Calgary Subdivision from Bassano to Calgary, Alta., and also the gleichen Subdivision.

H. SHALER has been appointed Locomotive Foreman, Crownsnest, B.C., vice J. A. Maddick, who has left the service.

Dr. J. A. MACDONALD has been appoint-

ed acting Medical Officer, Cascade Division, British Columbia Division, Vancouver, vice Dr. A. P. Proctor, who has been granted extended leave of absence, on his appointment as Surgeon Major with the British Columbia Field Hospital.

T. PENNEY, heretofore cashier, has been appointed Wharf Agent, Victoria, B.C., vice H. F. Bishop.

**Chicago Great Western Rd.**—C. A. FULLEN, General Agent, Winnipeg, Man., has had his jurisdiction extended to include the territory of the agency at Fargo, N.D.

**Chicago, Milwaukee and St. Paul Ry.**—J. G. THOMSON, heretofore engaged in the company's publicity work at Seattle, Wash., has been appointed Commercial Agent, Victoria, B.C., vice C. A. Solly.

**Grand Trunk Pacific Ry.**—The work heretofore separately performed by the mechanical and car departments has been consolidated at all points, except Transcona, the locomotive foreman being directly responsible, reporting to the superintendent. A district locomotive foreman has been assigned to each superintendent's territory, who will generally supervise the mechanical and car work, under the jurisdiction of the superintendent, to whom he will report. The time of all employees engaged in such work will be kept in the superintendent's office.

J. L. HODGSON, Master Car Builder, having resigned, C. E. BROOKS, acting Superintendent of Motive Power, will, until further advised, assume the duties of that position in addition to his own. Mr. Hodgson has apparently been transferred to the National Transcontinental Ry. Service.

W. J. STURGES, Storekeeper, Transcona, Man., has had his jurisdiction extended over the line to Prince Rupert, B.C., including branch lines. Requisitions for special material are sent to him at Transcona, and for standard material, hitherto sent to D. Robertson, who has enlisted for active service, are sent to C. Argyle, storeman, Edmonton, Alta.

A. A. TISDALE, formerly Superintendent, Lake Superior Division, Fort William, Ont., who has been on leave of absence, has been appointed Superintendent, Regina Division. Office, Regina, Sask.

J. F. MOFFATT, formerly Road Foreman of Locomotives, Wainwright, Alta., who was appointed General Locomotive Foreman over territory from Fort William, Ont., to Transcona, Man., recently, has resumed his former position, on the taking over of the line east of Winnipeg by the Canadian Government Railways.

A. ANDERSON, heretofore Roadmaster, Fort William, Ont., has been appointed Roadmaster, Edson, Alta.

A. KILPATRICK, heretofore Superintendent, Lake Superior Division, Fort William, Ont., has been appointed Superintendent at Smithers, B.C., vice J. H. Todd.

H. R. BULLEN, heretofore Soliciting Freight Agent, Regina, Sask., has been appointed City Passenger Agent, G.T.R. and G.T.P.R., San Francisco, Cal. Through an error in our advice from the company, an incorrect title was given in a recent issue.

The following station agents have been appointed,—Landis, Sask., C. H. LeGallais; Reford, Sask., T. Larner; Mawer, Sask., W. Norman; Irma, Alta., J. T. Kerr.

**Grand Trunk Ry.**—G. H. FRITH has been appointed acting Assistant Engineer, Belleville Division, Ontario Lines, vice G. A. Butler, resigned. Office, Belleville.

E. J. WEARING has been appointed acting General Assistant, G.T.R. and Canadian Express Co., Liverpool, England, vice W. Cuthbertson, deceased.

The following station agents have been appointed,—Britton, Ont., Mrs. J. Miles (passenger); Joe Lake, Ont., F. Folkard; Brockville, Ont., outside agency, J. W. Ridgeway.

**Intercolonial Ry.**—T. W. HENNESSY, heretofore Master Mechanic, Campbellton, N.B., has returned to his former position as locomotive driver, and is located at Truro, N.S.

F. CAREY, heretofore acting Master Mechanic, Division 3, Moncton, N.B., has been appointed Master Mechanic, Division 2, vice T. Hennessy. Office, Campbellton, N.B.

W. E. BARNES, formerly Master Mechanic, Division 2, and who was assigned to other duties in June, has resumed the position of Master Mechanic, Division 2, vice F. Carey, acting Master Mechanic, transferred to Campbellton, N.B. Office, Moncton, N.B.

E. MOORE is reported to have been appointed station agent, Moncton, N.B., vice C. Bovard, reported transferred to National Transcontinental Ry. service.

See also Canadian Government Railways.

**Lehigh Valley Rd.**—The appointment of G. H. LEE as General Passenger Agent reporting to the Traffic Manager, as announced in our last issue, does not affect the position of C. S. LEE, who continues as Passenger Traffic Manager.

**National Transcontinental Ry.**—The following is a complete list of officials between Quebec and Winnipeg, including the G.T. Pacific Ry. Lake Superior Branch, as far as we have been officially advised to date. The list includes a number of officials whose appointments have already been mentioned in Canadian Railway and Marine World. General officers,—F. P. BRADY, General Superintendent; L. G. ROBLIN, General Master Mechanic; W. A. COWAN, Division Engineer; A. H. WILLET, Assistant Division Engineer; A. J. LEGERE, General Car Inspector, all with offices at Cochrane, Ont.; District 1, Quebec to O'Brien, including O'Brien,—A. J. GORRIE, Superintendent; J. J. McMANUS, Assistant Superintendent; J. E. LePAGE, District Freight and Passenger Agent; A. BABIN, Resident Engineer, with offices at Quebec, Que.; P. J. HENSELWOOD, Bridge and Building Master; M. CASEY, Roadmaster; A. BEAUSEIGLE, acting Roadmaster, with offices at Parent, Que.; District 2, O'Brien to Superior Jct., not including yard,—W. B. WAY, Superintendent, Cochrane, Ont.; H. A. RYAN, Assistant Superintendent, Grant, Ont.; A. DEVINE, District Master Mechanic, Districts 1 and 2; H. A. LAIRD, District Freight and Passenger Agent; J. E. GIBAUD, Resident Engineer; W. J. CHISHOLM, Bridge and Building Master; W. P. HOUSTON, Roadmaster from mileage 1, O'Brien Subdivision, to mileage 109.5 Cochrane Subdivision, with offices at Cochrane, Ont.; J. WILSON, Roadmaster from mileage 109.5 Cochrane Subdivision, to mileage 63.4 Grant Subdivision, Grant, Ont.; J. E. LOGAN, Roadmaster from mileage 63.4 Grant Subdivision to mileage 131.8, Armstrong Subdivision, Armstrong, Ont.; District 3, Superior Jct. to Winnipeg, and Lake Superior Branch, G.T. Pacific Ry., R. S. RICHARDSON, Superintendent; A. MacGILLIVRAY, Resident Engineer, with offices at Fort William, Ont.; W. A. HILL, Chief Dispatcher, Graham, Ont.; R. A. POSTANS, Roadmaster, Fort William, Ont.; P. BERNARD, Roadmaster, Graham, Ont.; H. McCORMICK, Roadmaster, Transcona, Man.; J. BIRSE, District Master Mechanic; A. POSSNETT, Car Foreman; D. CAMPBELL, Bridge and Building Master, with offices at Fort William, Ont.; J. A. MITCHELL is General Foreman of Shops, Transcona, Man.; A. J. ROBERTS is Loco-

motive Foreman, Transcona, Man.; C. H. MOULTON, Locomotive Foreman, Redditt, Ont.; T. W. PALOS, Locomotive Foreman, Graham, Ont., and C. E. STEWART, Locomotive Foreman, Mission, Fort William, Ont.

The locomotive and car shops at Transcona, Man., built by the N.T.R. Commission and heretofore operated by the Grand Trunk Pacific Ry., have been taken over with the N.T.R. line east of Winnipeg for operation as part of the Canadian Government Railways, and all the officials of the shops appear to have been transferred to the N.T.R. service, except C. E. Brooks, who remains with the G.T.P.R. as acting Superintendent of Motive Power and also in charge of the G.T.P.R. Master Car Builders' work. J. L. Hodgson, Master Car Builder, G.T.P.R., appears to have been automatically transferred to the N.T.R. service, but no official announcement has yet been made, and the various foremen and employes in both the car and locomotive departments have been similarly transferred.

C. BOVARD, station agent, Intercolonial Ry., Moncton, N.B., is reported to have been appointed Assistant Superintendent, N.T.R., Edmundston, N.B.

C. R. MACKENZIE, heretofore General Superintendent's Assistant, Canadian Government Railways, Moncton, N.B., has been appointed chief clerk to General Superintendent. Office, Cochrane, Ont.

T. H. GILMOUR, K.C., has been appointed Solicitor and Claims Agent, Winnipeg to Armstrong, on main line, and Lake Superior branch, Lake Superior Jct. to Fort William. Office, 402 Lindsay Building, Winnipeg.

B. S. WOODS, frog shop foreman, Transcona, Man., has enlisted to active service in Europe. No appointment had been made to the position at the time of writing.

See also Canadian Government Railways.

**Thousand Islands Ry., Oshawa Ry.**—We are officially advised that no appointment has been made to fill the vacancy caused by the death of J. F. Chapman, Manager. H. W. COOPER, Secretary-Treasurer, is in full charge of the affairs of both companies for the present. Office, Gananoque, Ont.

**Toronto Suburban Ry.**—H. T. HAZEN, M.Can.Soc.C.E., District Engineer, Mackenzie, Mann & Co., Limited, and Consulting Engineer, Toronto Suburban Ry., has taken over the duties of Chief Engineer of the latter, vice E. T. Wilkie, A.M.Can.Soc.C.E.

**First through train on Canadian Northern Ry. to Pacific Coast.**—Sir William Mackenzie, President, C.N.R., left Toronto Aug. 22 by a special train over the company's main line via Sudbury, Port Arthur, Winnipeg, Edmonton and the Yellowhead Pass to New Westminster, the present Pacific Coast terminus of the line. He was accompanied from Toronto by Lady Mackenzie, Sir Glenholme Falconbridge, Chief Justice of the King's Bench of Ontario and Lady Falconbridge, D. B. Hanna, Third Vice President, C.N.R., A. J. Mitchell, Comptroller, Mackenzie, Mann & Co., and Assistant to Vice President, C.N.R., and John Aird, Assistant General Manager, Canadian Bank of Commerce. At Winnipeg the party was joined by Mrs. Hanna, M. H. MacLeod, General Manager, and the principal heads of C.N.R. departments there. It is said to be the intention to start a freight service between Toronto and Winnipeg during September. During Sir William's present trip to the coast a decision will probably be arrived at in regard to the operation of the line in British Columbia.

**The Pennsylvania Rd. System** carried approximately 180,000,000 passengers in the year ended June 30, and not one was killed in a train accident.

## Changes in Canadian Northern Railway's Ontario Division Organization.

Effective Sept. 1, the Ontario Division will be operated and organized as follows:— jurisdiction, Toronto District, reporting to Superintendent. Office, Rosedale, Toronto.

TORONTO DISTRICT—		Miles.
TORONTO TERMINALS .....	Toronto to East Don .....	5.6
TRENTON SUBDIVISION .....	East Don to Trenton .....	105.0
RIDEAU SUBDIVISION .....	Trenton to Ottawa .....	146.2
MAYNOOTH SUBDIVISION .....	Trenton to Wallace .....	117.6
	Ormsby Jct. to Coe Hill .....	7.2
PICTON SUBDIVISION .....	Trenton to Picton .....	124.8
IRONDALE SUBDIVISION .....	York River to Kinmount Jct. ....	30.6
TWEED SUBDIVISION .....	Yarker to Bannockburn .....	51.9
KINGSTON SUBDIVISION .....	Harrowsmith to Kingston .....	54.5

		828.5

J. IRWIN is appointed Superintendent, Toronto District. Office, Rosedale, Toronto.

GEO. COLLINS is appointed Superintendent Branch Lines, with jurisdiction over Picton, Maynooth, Tweed, Irondale and Kingston subdivisions, reporting to Superintendent. Office, Trenton.

W. R. KELLY is appointed Assistant Superintendent with jurisdiction over Parry Sound, Orillia, Toronto Terminals, Trenton, Rideau and Brockville subdivisions. Office, Rosedale, Toronto.

W. C. MOORE is appointed Master Mechanic with jurisdiction over Toronto District, reporting to Superintendent. Office, Trenton.

G. P. MACLAREN is appointed Division Engineer with jurisdiction over Toronto District, reporting to Superintendent. Office, Rosedale, Toronto.

P. H. FOX is appointed Chief Dispatcher with jurisdiction over Toronto District. Office, Rosedale, Toronto.

W. J. CURLE is appointed Superintendent with jurisdiction over Lake Superior District (except Nipigon Subdivision). Office, Capreol.

J. E. NELSON is appointed Superintendent with jurisdiction over Nipigon Subdivision. Office, Port Arthur.

A. J. GAYFER is appointed Trainmaster with jurisdiction over Ruel, Oba, Long Lake and Nipigon Subdivisions. Office, Hornepayne.

A. J. GAYFER is also appointed Division Engineer with jurisdiction over Lake Superior District. Office, Hornepayne.

J. H. McALPINE is appointed Master Mechanic with jurisdiction over Lake Superior District, reporting to Superintendent. Office, Parry Sound.

J. E. CATHER is appointed Chief Dispatcher with jurisdiction over Lake Superior District (except Nipigon Subdivision). Office, Capreol.

T. J. BROWN is appointed Chief Dispatcher with jurisdiction over Nipigon Subdivision. Office, Port Arthur.

The Maintenance of Way Department organization will be as follows:

R. A. BALDWIN—Engineer Maintenance of Way, jurisdiction over Ontario Division, reporting to General Superintendent. Office, Toronto.

### TORONTO DISTRICT.

G. P. MACLAREN—Division Engineer,

E. MYERS—Supervisor of Track, jurisdiction, Toronto Terminals, Parry Sound and Trenton Subdivisions. Office, Rosedale, Toronto.

O. OGDEN—Supervisor of Track, jurisdiction, Rideau and Brockville Subdivisions. Office, Trenton.

O. KERR—Supervisor of Bridges and Buildings, jurisdiction, Parry Sound, Trenton, Rideau and Brockville Subdivisions. Office, Rosedale, Toronto.

J. McDONALD—Supervisor of Track, jurisdiction Maynooth, Picton, Irondale and Tweed Subdivisions. Office, Trenton.

J. D. EVANS—Supervisor of Bridges and Buildings, jurisdiction Maynooth, Picton, Irondale and Tweed Subdivisions. Office, Trenton.

### LAKE SUPERIOR DISTRICT.

A. J. GAYFER—Division Engineer, jurisdiction Lake Superior District, reporting to Superintendent. Office, Hornepayne.

W. M. JACKLIN—Supervisor of Roadway (including track, bridges and buildings), jurisdiction Nipigon and Long Lake Subdivisions. Office, Hornepayne.

E. AUDET—Supervisor of Roadways (including track, bridges and buildings), jurisdiction Ruel and Oba Subdivisions. Office, Capreol.

E. HAYSTEAD—Supervisor of Track, jurisdiction Sudbury and North Bay Subdivisions. Office, Capreol.

F. McKAY—Supervisor Bridges and Buildings, jurisdiction Sudbury and North Bay Subdivisions. Office, Capreol.

**G. T. R. Employes and the War.**—Employes of various divisions of the G.T.R. system are forming associations for the organization of systematic and permanent methods of contribution for war purposes. The G.T.R. Patriotic Association of Toronto has been organized with the following officers:—President, H. E. Whittemberger; Chairman, G. E. Pepall; Vice Chairman, W. S. Wilson; Secretary, J. A. Murphy, and Treasurer, J. Gray. The Barrie Division Railwaymen's Patriotic Association has also been formed, with P. J. Lynch as Chairman. Sub-committees will be arranged to establish a system of monthly collections until the end of the war, the amounts realized being expended on such articles from time to time as are decided to be desirable.

# Electric Railway Department

## Regulations for Winnipeg Electric Railway to Prevent Damage by Electrolysis.

In July, 1913, the Winnipeg City Council applied to the Manitoba Public Utilities Commissioner to compel the Winnipeg Electric Ry. Co. to establish measures of prevention of damage to underground cables and mains by electrolysis by electrical currents from the company's railway system. In June, 1914, the Greater Winnipeg Water District asked that consideration be given to the matter of electrolysis in so far as it might in any way affect the proposed pipe line for water supply and the distribution systems connected therewith. In the same month the Manitoba Government Telegraph Commission submitted a brief claiming that damage was being done to its underground cable system by electrolysis from stray currents of the Winnipeg Electric Ry. The railway company submitted a brief maintaining that every due precaution was being taken by it to mitigate all damage due to electrolysis. The Commissioner of Public Utilities appointed A. F. Gans to investigate the matter and after receipt of his recommendations made the following order to go into effect on Aug. 12:—

1. Every rail joint in the tracks of the electric railway system shall be so constructed and maintained that its resistance does not exceed the resistance of 8 ft. of continuous rail. Tests of the resistance of rail joints shall be made and recorded at least once every year, and when defective joints are found they shall be promptly repaired.

2. The 2 rails of every single track in the said system, and the 4 rails of every double track, shall be maintained adequately cross-bonded, and all special track work shall be spanned by copper wire jumpers of adequate current-carrying capacity.

3. All conductors which connect the tracks of the electric railways in the said system to the direct-current supply stations shall be insulated from the earth.

4. No metallic connections shall be permitted by the Company in its system between water, gas or other underground pipes and any part of the electric circuit of the electric railway.

5. The rails or other metallic conductors forming parts of current carrying electric circuits of the electric railway system, which are not insulated from earth, shall be designed, constructed, operated and maintained, so that the average potential difference during 10 consecutive minutes between any two points 1,000 ft. or less apart on said rails or other metallic conductors will not exceed 1 volt, and, further, so that the average potential difference during any 10 consecutive minutes between any two points more than 1,000 ft. apart on said rails or other metallic conductors within the area comprised by Winnipeg (including Elmwood) and St. Boniface, will not exceed 7 volts, (approximately the value adopted by the British Board of Trade.)

On account of the concentration and great importance of the underground structures in the neighborhood of the corner of Portage Ave. and Main St., Winnipeg, all feeders connecting to the tracks within a radius of 1,500 ft. from that corner shall be so proportioned as to maintain their connection points in the tracks at the same or slightly lower potential than the tracks at that corner during peak load. Owing to the proximity of the city water works, and of the important water main leading to the

said works, to substation 8 on Logan Ave., at McPhillips St., all feeders from the said station to the tracks shall be proportioned for substantially the same voltage drop during peak load. The track voltage requirements of this recommendation are to apply only to normal operating conditions on a business day, and not to occasional abnormal conditions in street railway traffic brought about for example by fires, storms, or holiday crowds. If at any time such difference of potential exceeds the above the company shall take immediate steps to bring it below such limit.

6. Potential wires insulated from earth shall be installed by the company in the district of every substation whereby contact may be made to the tracks at each point where a return feeder from this station connects to the tracks, at the feeding limits of each substation on the principal track lines where these terminate within the limits of Winnipeg (including Elmwood) and St. Boniface, and at the points where principal track lines cross the limits comprising Winnipeg (including Elmwood) and St. Boniface. These potential wires shall terminate in the substations in such a way that they can be conveniently connected to an indicating voltmeter and to a 24-hour recording voltmeter. One voltmeter of each type shall be provided for each direct-current supply station, so arranged that the potential difference between any two of the above described points in the track system can be measured or automatically recorded. A potential wire shall also be connected to a nearby water pipe by means of which the potential of the negative bus-bar referred to earth may be measured or recorded.

7. By means of the potential wires and voltmeters provided for in clause 6 above, the following measurements and records shall be obtained: The average potential difference between the tracks at a feeder connection point near the substation and each other feeder connection point, shall be determined from readings of the indicating voltmeter taken and recorded for a period of about 5 minutes during the peak load hour, once every month. From such test the point in the tracks which is at the lowest potential shall be determined. A 24 hour record of the potential difference between each point in the tracks at the feeding limits or at the city boundary and the tracks at the point of lowest potential shall then be determined once every month, on a normal business day. The potential difference between the negative bus-bar and a nearby city water pipe shall also be obtained at least once every day during peak load. If this potential difference should fall at any time to such a low value as to indicate grounding of the negative bus-bar, steps shall be taken by the said company to remove the ground connection.

8. All records of the tests described in the foregoing clauses, as well as the recording meters and meter charts shall be open to inspection from time to time by an authorized representative of the Commission. True copies of all records, as soon as completed, shall be forwarded by the company, to the Commission, as also recording meter charts, within 24 hours after the taking of such records and charts.

9. After the work required by clauses 1, 2, 3, 4, 5 and 6 of this order has been done, in every case all drainage connections from

underground lead cable sheaths to railway return circuit in Winnipeg, shall in every instance be opened and kept open, and tests of the potential of these cable sheaths referred to other structures and of current on the cable sheaths, shall (on 24 hours' written notice to the owner of such cable sheaths of the time and place at which the test is to be made), be made by the company to determine the electrolysis condition of such cable sheaths. If, in such case, cable sheaths shall be found to require additional protection, a limited amount of electrical drainage may be applied by the company upon application to this Commission on notice to the owner of the cable sheath, and subject to such directions as may be then given by this Commission. Such drainage connections must be arranged to apply equally to all of the underground cable systems, so as to avoid setting up serious potential differences between the lead sheaths of the different cable systems. They must also be so arranged and maintained as to drain off the least current consistent with the complete protection of the cables and without setting up dangerous voltages to other underground structures. A suitable fuse, a knife switch, and an ammeter, shall be installed in each drainage connection, and daily readings of the current drained from the cables during the peak load hour shall be obtained and recorded. The drainage connection must be opened whenever the station is not in operation.

10. In future constructions and reconstructions of direct current electric railways employing the running tracks as part of the electric circuit, such track construction shall be employed, in addition to that already required by the previous clauses, as will give the greatest practicable resistance between tracks and earth for the existing conditions. Without limiting the foregoing this must be done particularly where such railways cross or run close to underground pipe or cable lines.

Note.—Clauses 1, 2, 3 and 4 of the foregoing are to apply to the railway lines of the company, as far as these lines are supplied with direct current from the substations located within or near the limits of Winnipeg. Clauses 5, 6 and 7, however, are not made to apply to the lines extending beyond the limits of Winnipeg and St. Boniface, because these lines are generally located on country roads where the tracks can be substantially insulated from ground, and where there are at present no underground structures which could be affected by electrolysis.

11. In future constructions or reconstructions by the company (within the Province of Manitoba, but excepting the cities of Winnipeg and St. Boniface, which are covered by the previous clauses) of direct current electric railways employing the running tracks as part of the electric circuit, clauses 1, 2, 3 and 4 shall be complied with by the company, and, in addition, such track construction shall be employed by the company as will give the greatest practicable resistance between tracks and earth in the existing conditions. If such electric railways operate within limits where there is valuable underground property which may be endangered by electrolysis, the track voltage limitations, the potential wires for measuring these voltages, and the periodic

tests of these voltages, as required in clauses 6, 7 and 8 hereof, shall be complied with within the limits affected.

12. The company shall prosecute the herein specified work and equipment to completion by Oct. 31, 1916. Immediate action shall be taken by the company to prosecute the work and monthly progress reports shall be delivered by the company to the Commission. The work accomplished from month to month, after this order goes into effect, must be such as to show that all diligence is being wrought to execute this order. In the event of want of diligence from month to month, as aforesaid, by the company in carrying out the work hereby ordered the city may apply to this Commission for the imposition of penalty for delay or for such other order as may appear proper. The company shall, in the construction, maintenance and operation of its electric railway system, continuously observe and perform all the directions contained in this order.

13. In the design and construction of the insulated return feeder system as required under this order, the company shall employ a safety factor of 1.5, that is to say in determining the amount of copper required in the return feeders to reduce the voltage drop to the limit prescribed under clause 5, which will be estimated theoretically under the normal peak load conditions, such amount shall be increased by 50% of itself to insure the fulfilment of the requirements under varying operating conditions.

14. In the installation of insulated return feeders and potential wires along Portage Ave. from Victoria St. to the St. James substation, and on Main St. from Graham Ave. to Sutherland Ave., all wires and cables shall be placed underground in conduits of the company laid in streets as either already existing, or (as to Main St.) to be constructed according to the plans heretofore approved for that purpose by the City Council.

15. In the event of the herein specified work and equipment not being completed by midnight of Oct. 31, 1916, the company shall pay a penalty of \$50 for each and every day that the default continues after the specified time.

### The Electric Railway Accident at Queenston.

The coroner's jury which enquired into the accident on the Niagara Falls Park & River Ry. at Queenston, Ont., July 7, in which a number of persons were killed and a larger number injured, returned the following verdict:—"We find that H. J. Partridge and others came to their death on July 7 from excessive speed causing car 685 to derail and overturn. Said car was driven by Motorman Sidney Boyt, and in charge of Conductor George Caswell. Excessive speed was caused by the ineffective working of the brakes on a wet and greasy rail. We find also that the motorman did all in his power that was possible for him to do with the equipment at hand to control the car. We still further find a very slack observance of rules of the company by the officers and operators regarding equipment, which includes sand and loading."

On Aug. 4 R. R. Dickson, Vice President and General Manager, International Ry., which controls the Niagara Falls Park and River Ry., was arrested on a charge of criminal negligence in connection with the accident. The magistrate admitted him to bail of \$20,000 to appear at St. Catharines, Ont., Sept. 1.

## The Jitney Situation in Canada.

There is apparent all over Canada a general diminution of the number of cars engaged in the jitney business. In Montreal and Saskatoon, Sask., the business has practically ceased, while in Toronto, Winnipeg and other places the number of cars running has been considerably reduced. In a few of the smaller cities and towns of Ontario, in particular, a beginning has been made with a jitney service, but in nearly every case it is being run to give connection with outside points, and not as a continuous service on schedule routes within the town.

The Toronto Jitney Association, which was incorporated May 12, has decided to go out of business. In fact the business practically left the company, the owners and drivers of jitneys claiming that they could do better for themselves, than with the association, which charged members \$2.50 a week, in return for which certain services were given, in connection with the routing of cars, making up schedules, etc. Another feature claimed for the association was that through it the members would be able to buy supplies and repairs at reduced prices. The members say the association failed to live up to this part of its promise, but, however this may be, it was not the chief cause of the failure of the association, which can be laid at the door of the non-association jitney owners and drivers, who cut in on routes when travel was brisk, made their routes long or short just as it suited them, and never bothered about schedules. The result was that the owners of the cars decided to save the \$2.50 a week. The bailiffs were put in possession of the association's office for rent, July 27, and the business ceased. However, the jitneys have not yet disappeared from Toronto, although they are very much fewer in numbers. The wet weather of the past month or so has also hit the business severely. It was expected there would be a considerable revival of the business during the Toronto Exhibition, which opened Aug. 28.

The regulation of the jitney business in Hamilton, Ont., comes under the bylaw licensing and regulating licensed omnibuses, which is dated June 24. The term licensed omnibus in the bylaw means "every licensed vehicle used in what is known as the jitney service, and used or intended to be used for the public conveyance of passengers who are carried without any pre-arrangement in vehicles other than those used as cabs" within the meaning of the bylaw of Oct. 14, 1910. Licenses under the bylaw of 1910 shall not entitle the owner of the vehicle to operate it as a jitney. No license will be given a car carrying less than five adults; the license fee payable being \$2 a seat a year, exclusive of the driver's seat; and the vehicle cannot be used otherwise than as a jitney. The regulations specify the form of application for the license, the care of the car, the conduct of the driver (who must not, under any circumstances, be a female) while in charge of the car, etc. The licenses may be revoked at any time by the Board of Police Commissioners without giving any reason therefor, and breaches of the bylaw are punishable by a penalty of not less than \$1 nor more than \$20.

A bylaw regulating jitney traffic in Berlin, Ont., has been passed, and a press dispatch Aug. 8, said:—"Berlin's sole jitney owner was fined \$1 for operating a jitney service contrary to the provisions of the bylaw." It was stated the decision would be appealed as the jitney was not being operated on a fixed route but was used to convey passengers to towns outside Berlin.

A jitney service is being operated in

Owen Sound, Ont., three ordinary five passenger cars being operated by A. J. Frost. He proposes to put on a regular jitney automobile if a satisfactory model can be bought. Owen Sound has no electric railways.

A jitney bylaw has been put in operation in the St. James district near Winnipeg, Man., with a license fee of \$5 a year. Eight licenses were at once taken out, but some 50 car owners were subsequently warned that they must take out licenses before operating in the district. They picked up passengers in the area, but did not collect any fares until the car got out of the Assiniboia limits.

As soon as the jitney bylaw became effective in Saskatoon, Sask., the three jitney cars operating in the city stopped running. The only jitney running is that from Sutherland into Saskatoon, and it is considered doubtful whether the bylaw can be put in operation against it, so long as it only carries back to Sutherland the passengers it takes into Saskatoon.

The bylaw passed by the Edmonton, Alberta, City Council, to regulate the jitney traffic came into effect Aug. 1. The jitney owners are forming an association for the protection of their interests.

The New Westminster, B.C., City Council has passed a bylaw regulating jitney traffic. There are very few jitneys operating in the city limits, the principal traffic being interurban with Vancouver. One of the regulations provides that no Asiatic or negro may enter a car in which there are already white passengers. Drivers must not solicit passengers either directly or indirectly on the public streets. The council may from time to time designate routes to be used and may say where cars shall be allowed to stand. Every owner of a car for hire shall put up a bond, but the amount of the bond has not yet been fixed.

A bylaw for the regulation of the jitney traffic came up for consideration by the Victoria, B.C., City Council, Aug. 8, being very similar to the one in force in Vancouver. Consideration of the bylaw was postponed in order that a committee of council and the jitney association could meet and agree to details, so that it could be passed at the next meeting of the council as an unopposed measure.

### Edmonton Radial Railway Operating Results.

Following is a comparative statement for six months ended June 30, 1915 and 1914,—

	1915.	1914.
Earnings .....	\$267,097.40	\$324,610.81
Expenses—		
Maintenance .....	26,013.57	45,346.82
Operating .....	125,487.28	164,920.63
Power .....	48,922.67	75,282.40
Total expense, exclusive of fixed charges .....	200,423.52	285,549.85
Capital charges .....	114,423.36	113,157.00
Depreciation .....	27,972.92	50,981.23
Gross expense .....	342,819.80	449,688.13
Deficit .....	75,722.50	125,077.32
Average expense per car mile .....	35.5c.	42c.
Power per car mile .....	3.2kw.	3.5kw.
Passengers carried .....	5,486,472	7,537,760

**Detroit United Ry.** The stockholders approved the proposed purchase contract with the city, Aug. 2. About 80% of the stock was voted. The contract is now before the City Council, and after a lapse of 30 days, the ratepayers will vote on the proposal.

**The production of briquetted fuel in the United States in 1914** amounted to 250,635 short tons valued at \$1,154,678, an increase of 37.82% over the production of 1913.

## Answers to Questions on Electric Railway Topics.

Following are questions submitted to the American Electric Railway Association's question box, with replies thereto by Canadian electric railway officials:

**Car Operation.** What effect does the variation of the centre of gravity have on the riding of a car?

H. M. Lloyd, Equipment Engineer, British Columbia Electric Ry., Vancouver, B.C.—Raising the centre of gravity has an effect similar to lengthening the pendulum, and would tend to lessen the violence of oscillation due to uneven track, and of the side shock resulting from "nosing" at high speeds; consequently a high centre of gravity tends to easier riding.

**Shop Cleaning.** What disposition do member companies make of shop cleaning, such as paper, waste and shop sweepings?

H. M. Lloyd, Equipment Engineer, British Columbia Electric Ry., Vancouver, B. C.—All sweepings which can be burned we consume in the sand-drying stove. Machine shop sweepings, such as steel turnings, etc., we have been using to fill in under a wharf close to the shop.

**Car Headlight Location.** Where is the best place to locate the headlight on an interurban car, on the dash, or on the hood?

H. M. Lloyd, Equipment Engineer, British Columbia Electric Ry., Vancouver, B. C.—Placing the headlight on the hood has the advantage in foggy or rainy weather that the beam is above the driver's line of vision, but in the case of an arc lamp, it is not so accessible as on the dash, and dangerous for the men who have to handle the lamp. After one or two men had fallen off the end of the car, while reaching up with the lamp, we changed the location. Our cars are all multiple unit, with end doors, and we now hang the lamp on the door, about 3 ft. from the floor, or a little over 7 ft. above the track. The ground connection is made through the door hinges, and the connecting receptacle is on the door post, about 6½ ft. up. In this position the lamp can be handled with safety and is readily accessible for inspection, as the door can be swung inward with the lamp lighted. The illumination of the track in this position is quite satisfactory.

**Oil Consumption.** How often do you oil journals, and what is the consumption per 1,000 car miles on a 40 ton car with 5 by 9 in. journals?

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., Montreal.—Our experience is that if a car journal box is reasonably dust proof and water proof and is carefully packed, it only requires attention twice a year. We find that a general overhaul of journal boxes in the spring and autumn in addition to the repacking of journal boxes when wheels are changed, takes ample care of the situation. The above refers to cars in city service.

## Calgary Municipal Railway Earnings.

Following is a comparative statement of the revenue, expenditures, etc., for June, 1915, and June, 1914:

	1915.	1914.
Revenue .....	\$45,098 00	\$63,976 25
Expenditure .....	27,723 44	39,815 76
Balance .....	17,374 56	24,160 49
Capital charges .....	45,098 00	63,976 25
Miles operated .....	212,062	266,536
Passengers carried .....	1,066,356	1,547,235
Revenue per car mile .....	21.266c	24.033c
Expenses per car mile .....	13.073c	14.938c
Power per car mile .....	2.960c	3.337c
Expenses to gross revenue .....	61.5%	62.2%

## Interurban Cars for the Toronto Suburban Railway.

Some details were given in Canadian Railway and Marine World for July, pg. 273, of the 6 interurban cars which the Toronto Suburban Ry. has ordered for service on its Toronto-Guelph line, now under construction. They will be of the centre entrance type with the under frames and sides entirely of steel. The entrance and exit doors will be under the control of the conductor, who will stand in the centre of the car, and there will be no steps protruding beyond the side of the car. Three of the cars will have two compartments, the forward one being for smokers; and three cars will have three compartments, half of the smoking compartment being utilized as a baggage compartment. The cars will be 59 ft. long over all, mounted on two four wheel trucks with 34 in. rolled steel wheels at 6½ centres. There will be four 110 h.p. motors for each car, and also air brake equipment. The couplers will be automatic, with air couplers combined.

The seats in the main passenger section will be upholstered in green plush, and in the smoking compartment in leather. Lavatory accommodation will be provided off the main compartment. The main compartment will be 25 ft. long, the entrance vestibule 6 ft., and the smoking compartment 21 ft., which in the cars which have the baggage compartment, will be reduced to 11 ft. The weight of each car will not exceed 850 lbs. per seated passenger. The cars are being built by the Preston Car and Coach Co.

## Toronto and York Radial Railway Operation on Yonge Street, Toronto.

The Ontario Railway and Municipal Board has approved of the company's plans regarding a switch, or deviation from Yonge St., Toronto, westerly into the company's property, south of Farnham Ave., subject to any modifications that may appear proper to be made after hearing the City's objections on engineering grounds. The City objected to the Board's jurisdiction to entertain the application, which, it claimed, raised the question of the company's right to lay the proposed tracks on Yonge St., as, if the company had that right, the Board might approve its plans and authorize the lawful execution of the work. The determination of this question, it is claimed, necessitates a consideration of the statutory powers of the company and its rights under various statutes and agreements.

In delivering judgment, D. M. McIntyre, Chairman, after going into the details of the acts of incorporation of the Metropolitan Ry. Co. and the Toronto and York Radial Ry. Co., and the various agreements concerned, summed up the position as follows,—

"The company under various statutes and agreements has constructed and is lawfully operating its railway on the portion of Yonge St. in question; the company owns a parcel of land abutting on that portion of Yonge St. upon which admittedly it has the right to erect terminal buildings and tracks; it seeks authority to connect its tracks so lawfully being in Yonge St. with its terminal proposed to be erected on its abutting parcel of land so that the purposes of its undertaking may be conveniently and effectually carried out, but the city objects on the ground that the company has no right in law, by statute or agreement to make the connection. Surely, after all these enabling acts and solemn agreements designed to bring into being a legal entity clothed with powers to discharge specific functions in the

transportation of persons and things, and after large expenditures made on the faith of them, the company might well complain of the denial of a right so vital. Indeed, upon a consideration of the facts and in view of the inconvenience and embarrassments which must be suffered by the public using Yonge street at the point in question by reason of its virtual adoption as a terminal by the company, the Board would rather have anticipated an application by the City to compel the company to provide a suitable terminal on its own property connected up with its tracks in the customary way."

The city has decided to appeal the case to the Imperial Privy Council.

## The Street Railway Situation in St. Thomas, Ont.

In connection with proposals that the London and Lake Erie Ry. and Transportation Co. take over the municipally operated street railway in St. Thomas, and run it in connection with its own line, the St. Thomas Journal comments as follows: "Municipal ownership and operation so far as the St. Thomas street railway system is concerned has been a miserable failure. Countless aldermen and paid officials have been in charge of the local road and failed to make good. Perhaps the fault was not their own but the fact remains that the deficit incurred by the operation of the line is increasing by leaps and bounds and the patience of the people has been exhausted. The London and Lake Erie Ry. and Transportation Co. is said to be desirous of taking over the St. Thomas system with the idea of operating it in conjunction with its own line from London to Port Stanley. If satisfactory terms can be arranged then there seems no reason why the city should not hand over the line to that company, and furthermore the local authorities should not be too particular in coming to terms. The ratepayers of St. Thomas are thousands of dollars out of pocket every year by reason of the street railway deficits. Almost any kind of a bargain with the company to operate the road should be satisfactory. Let the burden be taken off the shoulders of the taxpayers. The London & Lake Erie people in proposing to take over the road apparently see where it might be operated to advantage in connection with their own system, and, no doubt, they have considered the situation from all its aspects before making overtures toward securing the use of the lines and rolling stock. Operated by the company, we would naturally expect the local system to be of secondary importance in the company's estimation and run as such. What else may we ask? The whole province knows the deficit history of the St. Thomas railway. It is useless to deny that the system is a white elephant. Let us turn it over to some one else with the best terms that can be secured under the circumstances."

## Equipment for Toronto Civic Railway.

The Toronto City Council accepted tenders recently for equipment for the St. Clair Ave. car line as follows:

McGuire-Cummings Manufacturing Co., 1 single-truck sweeper body, \$1,695; Canadian Westinghouse Co., Ltd., 4 no. 533 commutation poles, \$593 each; 1 set of resistance for one motor, \$36; 1 lighting arrester, \$4; 2 circuit breakers, \$23; Canadian General Electric Co., Ltd., 2 K-10 controllers, \$126.75 each; 1 R-28 controller, \$89.45; 1 set of resistance for 2-motor car equipment, \$32; 300 ft. no. 6 B. & S. car wiring, double braid covered copper cable, 04.825 cts. per ft.; 150 ft. no. 14 B. & S. double braid rubber covered copper cable, 01.326 cts. per ft.

## Montreal Tramways Company's Annual Report.

Following is the report for the year ended June 30, submitted at the annual meeting, August 3:

Gross earnings .....	\$6,525,231 67
Operating expenses .....	3,713,996 44
Net earnings .....	\$2,811,235 23
From which deduct:	
City percentage on earnings .....	\$414,149 31
Interest bonds and loans .....	825,415 12
Interest debenture stock .....	800,000 00
Taxes .....	92,800 00
	2,132,364 43
Net income .....	\$ 678,870 80
Dividends .....	278,880 00
Surplus .....	\$ 399,990 80
Less:	
Transferred to contingent renewal account .....	275,000 00
Transferred to general surplus ...	\$ 124,990 80

The gross earnings have decreased during the year \$617,572.52, or 8.65 per cent., the operating expenses \$492,118.13, or 11.70 per cent., and the net earnings \$125,454.39, or 4.27 per cent. The ratio of operating expenses to earnings is 56.92 per cent., compared with 58.89 per cent. last year. \$212,731.80 has been charged to contingent renewal account during the year, representing expenditures made for special renewals. \$666,429.90 has been expended in the maintenance of the properties, plant and equipment, and charged to operating expenses. This, together with \$212,731.80 charged to renewal account, makes a total expenditure during the year on the upkeep of the properties of \$879,161.70. During the year there has been expended on capital account \$621,125.05. The company under its trust indenture is entitled to issue bonds on its capital expenditures equal to 75 per cent. thereof, and under this provision it is now entitled, when it shall so desire, to have bonds certified to an amount of \$742,477.11. During the year there has been redeemed and cancelled \$144,906.65 of the underlying bonds. The underlying bonds redeemed to date amount to \$983,513.24.

It will be noted that owing to the war and the general financial depression, this company has suffered a considerable decrease in its gross revenue, this being partly offset by a saving in operating expenses. In accordance with the desire of the City of Montreal to remove as far as possible the overhead wires in the streets, the company is now proceeding at considerable expense to place its overhead feed wires in the municipal conduits which have so far been provided for that purpose. Keeping in view the future growth of the city, the company has been working on a plan to rearrange its power distribution in order to make the power from the different stations interchangeable. This work will take some time to complete, but will place the company in a better position to handle the future traffic of the system. The property has been maintained in a high state of efficiency and is in excellent condition.

The company regrets having to report the death of Alexander Stewart, Auditor for the last eleven years. Pending the election of an Auditor, J. J. Robson was appointed to fill the vacancy to the end of the fiscal year.

In conclusion, your directors desire to place on record their appreciation of the valuable and faithful services rendered by the officers and employees of the company.

### Statistics.

Passengers carried .....	153,576,271
Car earnings per passenger .....	1.17
Transfers .....	53,316,530
Total passengers carried .....	206,992,801
Car earnings per passenger total carried .....	3.07

\*Includes amount due on shares not yet exchanged.

In presenting the report, the President, E. A. Robert, commented on the results of the year's operations, which in spite of war conditions showed a very fair balance. The directors, for whose services during the current year, \$32,000 was appropriated, were re-elected as follows.—President, E. A. Robert; Vice Presidents, J. W. McConnell and F. H. Wilson; Hon. J. M. Wilson, J. M. McIntyre, P. J. McIntosh, W. C. Finley, G. G. Foster, K. C., and W. G. Ross. J. J. Robson was appointed Auditor.

**Increased Car Fares in Great Britain.**—The Corporation of Birmingham has advanced all street railway fares 10% on account of war conditions. It is believed that this will produce about \$300,000 a year additional revenue. At present the tramway lines carry a passenger two miles and 600 yards for a penny fare. Under the new scale the average penny zone will be reduced to one mile, 1,200 yards. Outside this zone there will be an increase of a halfpenny on the present rates. The workmen's fares will go up a halfpenny on each return ticket. As showing the effect of war conditions the receipts of the Glasgow tramways for the last year were £1,070,353, a decrease of £8,083 from the preceding year.

**Interurban Cars for Toronto Suburban Ry.**—In the description of the new cars for this company's Toronto-Guelph line, in Canadian Railway and Marine World for July an error was made in stating that each car would be equipped with four 80 h.p. motors. They will each have four 110 h.p. motors.

## Sudbury-Copper Cliff Suburban Electric Railway Construction.

It is expected that this company's line from Sudbury to Copper Cliff, Ont., will be placed in operation by Oct. 1, the major portion of the line now being completed and ready for operation. The line at present under construction extends from Sudbury to Copper Cliff, commencing in Sudbury at Ramsay Lake, following John, Station, Durham, Cedar, Liscar and Elm Sts., the latter being the main street of Sudbury, to the outskirts of the town, following the highway alongside the C.P.R. Soo line to the Canadian Copper Co.'s property in Copper Cliff, which it will skirt into the town. The line will follow the border of this property in order that the slag filling which the company is making in the low land of its property, will not interfere with the railway location, so that no relocation will be required.

In Sudbury, 0.43 mile of line was laid last year on a six-inch concrete base in order that the permanent pavement being laid by the municipality might be carried out. To date, track has been laid on three miles of the line towards Copper Cliff, and the balance of the seven miles between the two municipalities has been graded ready for track laying, the steel and overhead work being ready for placing. The line is being laid with 80 lb. T rail on cedar ties, at 20 inch centres. Three inch gravel ballast is being used, and the rails are being electrically bonded. The maximum grade will be 3½ per cent., with practically no curvature outside the towns. There will be no bridges, and only three timber pile culverts of 15 ft. span.

The overhead construction in the towns will be tubular steel poles, with cross spans, and in the country, bracket construction on wooden poles. The trolley wire will be 4-0 copper. Six hundred volt d.c. will be used, power being obtained from the Wana-pitei Power Co. at 2,300 volt, 3 phase, 60 cycle a.c. A 300 k.w. induction motor generator set is to be installed at Ramsay Lake in the municipal pumping station and electric lighting plant, where the power will be received from the power company and converted. Tenders are now being received for this electrical equipment.

Tenders are also being received for three 20 ton double truck steel frame passenger cars, with general and smoking compartments, a package freight car, and a snow plough. It is the intention to use electric locomotives for freight service at a later date, but nothing definite has been done in this regard.

Two ten mile extensions to the lines are contemplated, both from Sudbury, one to the Coniston Mines, and the other to the Creighton Mines.

The directors are: President, J. J. Mackey; Vice President, J. H. Morin; other directors, D. M. Morin, T. E. Smith, C. McCrea, M.L.A. Secretary, M. J. Powell.

**The Running Board on Toronto Ry. Cars.**—The Mayor of Toronto, in conjunction with the Street Railwaymen's Union, obtained a summons against the Toronto Ry. Co., Aug. 24, for endangering the lives of its employees by operating cars on its lines having a running board along one side. The application for the summons stated that during this year one man had been killed and 14 men injured as a result of such operation. The matter has been under discussion for some time, and recently the Ontario Railway and Municipal Board declined to compel the company to abolish the use of these cars, chiefly owing to general conditions owing to the war.

## Lake Erie and Northern Railway Electrification.

Canadian Railway and Marine World for August contained general particulars about the electrification of this line which is being built from Galt to Port Dover, Ont., about 51 miles. The line will operate at 1,500 volts d.c. At Galt connection will be made with the Galt, Preston and Hespeler St. Ry., which runs through to Berlin, and now operates at 600 volts d.c.

The substation equipment for the Lake Erie and Northern will consist of permanent substations at Simcoe and Brantford, and a portable substation located for the present at Galt. This will give a substation spacing between Galt and Brantford of 20 miles, and between Brantford and Simcoe of 24 miles, with a stub end feed from Simcoe substation to Port Dover of 7 miles. Each of the three substations will have, for the present, one 500 k.w., 1,500 volt rotary converter, and 555 k.v.a., 3 phase transformer. The transformers may be connected so as to step down from 26,400 volt, 13,200 volt or 6,600 volt, 3 phase, 25 cycle circuits, to the desired a.c. rotary voltage. At the Simcoe and Brantford substations the incoming line will be 26,400 volt, 25 cycle, and at each station will go to the transformer primaries through the usual disconnecting switches, choke coils, and k. 21 oil switches, with overload relays for automatic trip.

The rotaries will be started from half voltage taps in the transformer secondaries, the starting switch being mounted on a small separate panel. The d.c. rotary and feeder panel will differ materially from the standard 600 volt panel. It will be 99 ins. high, of marble with black marine finish; and the circuit breaker and knife switch, in the positive lead, which will be at the top of the panel, will each be operated through bell cranks and rods from oil switch operating handles mounted at a convenient height on the front of the panel. The negative lead will be grounded direct from the rotary. The circuit breaker will be provided with low voltage release and auxiliary alarm switch. The d.c. ammeter with insulated cover will be mounted on the panel, and on a swinging bracket will be mounted a 2,000 v. scale d.c. voltmeter with insulated cover, and an a.c. ammeter and power factor indicator. A three phase aluminum cell lightning arrester, complete with horn gap, disconnecting switches and charging resistance, will be provided for the 26,400 volt circuit, and a s.p. d.c. aluminum lightning arrester for station use, with fuse and balancing resistance used across the 1,500 volt d.c. side. The rotary converter will be of special interest in view of its unusual overload capacity to meet the heavy peak loads of short duration incident to railway operation. While the normal full load rating at 1,500 volts is 333 amperes, it will carry 1,000 amperes for one minute, successful commutation being obtained by the use of commutating poles and pole face windings.

The portable substation will, it is said, be the first of its kind in Canada. All the equipment will be mounted on a standard steel flat car. The transformer will have no housing, but the rotary oil switch and other apparatus will be housed in. For service at Galt the transformer on the portable substation will be connected for 6,600 volt primary, but the connections may be readily changed for primary voltage of 13,200 or 26,400 volts for operation at other points along the line. The complete equipment for the three substations is being manufactured by the Canadian General Electric Co. at its Peterborough works, and the manufacturers will install the appar-

atus at the Simcoe and Brantford substations and equip the portable substation at the Peterborough works.

The L. E. & N. R. has ordered from the Canadian Westinghouse Co., Hamilton, Ont., two 60-ton, 1500-volt direct current locomotives, six 1500-volt quadruple car equipments, equipment for two trailer cars, and new universal air brakes for both motor and trailer cars. The locomotives are designed to operate on 1500-volts direct current with the following characteristics: swivel truck, standard gauge, diameter driving wheels 36 ins.; truck centre distance 17 ft. 8 ins.; height from top of rail to top of cab 12 ft.; width over all 10 ft.; tractive effort 9200 lbs., with average of 600 volts at motor.

Each of the six 1500-volt motor car equipments will consist of four 85 h.p. ventilated type motors and AB unit switch type of control. A new and improved type of automatic brake will be used, embodying the features made possible by the use of a universal valve which will be the mechanism that will operate to apply and release the brakes and charge the reservoirs, and it will so far correspond to the triple valve in common use. The universal valve will be of the built up type, a simple form of triple valve being the base. This will make it possible to install and operate the equipment, if desired, in stages by adding to the simplest form of valve, without discarding any of the valve portions, other valve portions as they are demanded by an advance in service requirements, up to the complete form of the device, which will be electro-pneumatically operated. The brake valve, type M-23, will embody improved features as compared with the ordinary automatic brake valve, such as limiting of brake pipe reductions to the predetermined desirable amount for service applications; prevention of overcharge of the equalizing reservoir; and quick response of brake pipe reduction by the combination of direct and equalizing piston exhaust ports. A supplementary reservoir is to be used to give high emergency brake cylinder pressure and graduated release as well as to assist the brake pipe in recharging the auxiliary reservoir. The compressor will be driven by a 1500-volt d. c. motor and is known as the D. K. type. It is of the same general design and construction as other Westinghouse compressors, but is especially rugged and adopted to meet severe operating conditions. The Westinghouse governor synchronizing system will be used to insure equal division of compressor labor, thereby securing reliability of air supply and low expense for compressor maintenance. This will also be used on the locomotives. The brake equipment for the electric locomotives will be the Westinghouse no. 14 EL.

**The Toronto Ry. and its proportion of cost of Subways.**—The Board of Railway Commissioners has granted the Toronto Ry. permission to appeal to the Supreme Court against the Board's order to contribute to the cost of the subway built by reason of the elevation of the C. P. R. tracks across Avenue Road. The permission is granted on the following questions,—Whether the Board had power to make the order under the agreement of the Toronto Ry. with the City of Toronto of 1891; whether the company is not entitled to have the city furnish the company, in the exercise of its running powers, a street or highway known as Avenue Road, and whether, if such was the effect of the agreement, the company should have been ordered to contribute to the cost of the construction of the subway.

## Winnipeg, Selkirk and Lake Winnipeg Electric Railway.

This company, which is a subsidiary of the Winnipeg Electric Ry., owns and operates a line from the northern boundary of the city of Winnipeg to Selkirk, near Lake Winnipeg, 21.44 miles; and a branch line, completed at the end of 1914, from Middlechurch to Stonewall, 16.67 miles, a total of 38.11 miles. The main line to Selkirk passes along the west bank of the Red River, while the branch line which was completed to Stony Mountain in 1913, and to Stonewall in Dec., 1914, runs in a nearly straight line northeasterly from Middlechurch, passing through the rural municipalities of St. Paul and Rockwood. For about five miles into Stonewall it parallels the C. P. R.

The right of way of the branch varies from 45 to 90 ft. in width and it is practically all owned by the company. At Stony Mountain there is a grade of 2.6% which is practically the only one on the line except for the Masters Junction subway. There are few curves on the branch, the most important being two of 16 degrees each. The only bridge structure is a subway at Masters Jct., which provides a crossing under the C. P. R. Lake Winnipeg Branch. This subway is about 250 ft. long, and is of heavy construction. The reinforced concrete work rests on pile foundations placed at 3½ ft. centres. The abutments are reinforced with steel rails. The subway is provided with 5% grades at either end, necessitating a drain of about half a mile long to the Red River. The track is laid with 60 lb. rails, A. S. C. E., specifications, laid on tamarack ties spaced 27 in. centres, with gravel ballast. The transmission system is carried on 45 ft. cedar poles. Power for both the main and branch lines is obtained from the Winnipeg Electric Ry. Co. at 2,200 volts, and is stepped up to 13,200 volts for transmission to the three substations located at Middlechurch, Lockport and Stony Mountain. At these stations the current is converted into d. c.

Connection is made at the northern limits of Winnipeg with the Winnipeg Electric Ry. lines.

## Regina Municipal Railway Earnings, Etc.

Operating results for June, compared with those for June, 1914:

	1915.	1914.
Revenue .....	\$12,311 85	\$19,722 53
Operating expenses .....	13,658 46	17,368 14
Capital charges .....	9,137 58	7,476 52
Operating deficit .....	1,346 61	2,354 39
		(Surplus.)
Passengers carried .....	257,994	397,087
Expenses per car mile, without power .....	13.93c	15.02c
Expenses per car mile, with power .....	18.09c	20.03c
Power per k.w.h. ....	2.08c	2.00c
Platform wages per car hour .....	74.17c	76.52c
Expenses percentage of earnings, less capital charges .....	110.94%	
Expenses percentage of earnings, with capital charges .....	185.15%	

**Rumored Purchase of the Chatham, Wallaceburg and Lake Erie Ry.**—In regard to persistent rumors to the effect that the Hydro Electric Power Commission of Ontario was negotiating for the purchase of the Chatham, Wallaceburg and Lake Erie Ry. as a part of its projected electric railway scheme, Sir Adam Beck, Chairman of the Commission, is reported to have stated, recently, that no negotiations had been carried on and none were under way, in connection with the railway mentioned.

### The Montreal Tramways Company's Franchise.

The litigation in connection with the proposal to grant a new franchise to the Montreal Tramways Co. includes the original injunction proceedings; the application to convict the Mayor and certain of the controllers for contempt of court; the appeal against these proceedings; the quo warranto proceedings against Controller Herbert, and certain proceedings against Controller Macdonald. Negotiations are proceeding with the object of having all the cases heard together in the fall. Meanwhile affidavits and other declaratory documents are being filed in one or other of the causes, and the affair is being brought forward upon one technical point or another. The main result of the proceedings is that the injunction restraining the Board of Control and the City Council from discussing the franchise question until the hearing of the injunction application "on the merits" is binding.

### Fare Reductions on British Columbia Electric Railway and the Jitney Traffic

Full particulars of the fare reductions made in Vancouver and Victoria, and between Vancouver and New Westminster, have been given by Canadian Railway and Marine World in previous issues. The results are of very general interest and for purposes of comparison we will give the April and June monthly figures. The reductions went into effect in Vancouver and Victoria May 1, and between Vancouver and New Westminster May 17. Following are the figures:—

	Gross earnings:	April, 1915.	June, 1915.
Vancouver City .....		\$88,592 71	\$87,445 05
Victoria City .....		25,859 60	26,874 03
District 1, interurban ....		13,869 10	14,936 22
Passengers carried:			
		April, 1915.	June, 1915.
Vancouver City .....		1,788,025	2,249,951
Victoria City .....		523,323	720,181
District 1, interurban ....		144,181	153,036

Increases and decreases in earnings per car mile as between April and June results:

	Per car mile.
Vancouver City, decrease .....	0.70c
Victoria City, decrease .....	2.41c
District 1, interurban, increase .....	0.91c

From the above figures it will be seen that while in Vancouver the company carried approximately 20% more passengers in June than in April, the earnings per car mile showed a decrease. In Victoria both earnings and passengers carried showed an increase, while the earnings per car mile showed a decrease owing to additional car miles operated. On District 1, interurban, a slight increase was shown.

While the months of May and June have been used for comparison purposes these figures do not show exactly the true situation respecting the revenue. For instance, prior to the reduced fare being put into effect the revenue traffic curve showed a downward tendency, and it was not until after the tango tickets were put into force that this curve commenced to show an increase—and at present the daily earnings are higher than they were at the time of inaugurating the reduced fare.

The jitney situation on the mainland as well as on Vancouver Island has improved to some extent due, it is thought, to reduced fares adopted by the B. C. E. R. Co., and not as a consequence of regulations put into effect by the city of Vancouver, which were of very little practicable assistance to the company. From the following figures it will be seen that the daily average number of

jitneys operating in Vancouver commenced to decrease after the first week the tango tickets were in effect; a decrease is also noted in Victoria:—

Week ended:	Vancouver.	Victoria.
May 1 .....	294	125
May 8 .....	301	124
May 15 .....	297	105
May 22 .....	229	98
May 29 .....	276	114
June 5 .....	241	125
June 12 .....	226	94
June 19 .....	229	93
June 26 .....	236	126
July 3 .....	218	114
July 10 .....	226	94
July 17 .....	220	85
July 24 .....	216	110

The jitney operators will, of course, find the summer months the most profitable, but with the coming of the autumn and winter months, it is expected that the reduced fare tickets will result in a much larger number of passengers being carried on the electric railway cars.

### Fares on the Winnipeg, Selkirk and Lake Winnipeg Railway.

The Public Utilities Commissioner of Manitoba, H. A. Robson, made an order recently in regard to the Winnipeg, Selkirk and Lake Winnipeg Ry. and its owning company, the Winnipeg Electric Ry., which modified an order made April 1, 1914, in respect to fares in the rural municipality of West Kildonan, which adjoins Winnipeg on the north. Following is a summary of what is substituted for clause 1 of the previous order:—

In the division described as A in the previous order, viz., between the north limit of the City of Winnipeg and Templeton Ave. the Winnipeg, Selkirk and Lake Winnipeg Ry. shall sell to any person on its cars in the division for 25c. each strips or parcels containing 4 combination tickets, that is to say, 8 tickets, 4 of which shall be good each for one fare for one passenger on the Selkirk line in the division, travelling either way, and the other 4 of which shall be good each for one of the trips on the Winnipeg line following: Going south on entering the car at the north limits of Winnipeg, on the Main St. line only, with a right to a transfer as in case of the ordinary city fare. Going north, on any car of the Winnipeg system going to the north limit on Main St., or if the car is not so destined, then with a transfer only to a car bound for the north limit of Winnipeg.

To school children travelling on the said line in the said division, the company shall sell for 10c. each, strips each containing five tickets, each ticket to be good for one trip, on any day in either direction on the company's lines within Division A in the municipality.

The present rate available in the municipality, of 25 tickets for 50c. is cancelled, and there are substituted tickets, each good for one adult fare within Division A as follows: Six white tickets, good at any time, for 25c. Eight red tickets good on Sundays in all hours, and on week days, before 8 a.m., and between 5 and 6.30 p. m.

In respect of through traffic between points in the City of Winnipeg and Kildonan Park, which is owned by the city, but is situated west of Kildonan, there shall be established upon the lines of the two railway companies a joint rate over the said lines available to the public, in the months of May, June, July, August and September, of each year, on Saturdays and Sundays, and every Dominion or Provincial holiday, and every half or whole municipal holiday, and after 5 p.m. on every other day, represented by tickets to be sold on the cars at 5 for 25c., each ticket to be good for one journey

from any point in Winnipeg to Kildonan Park or return, and to consist either of two portions, one for use on the Winnipeg line, (with a transfer if requisite, to a line going to the north limit of Winnipeg or Main St.), and one for use on the Selkirk line or to consist of one ticket good for the part of the journey in Winnipeg (and such transfer if requisite) and a transfer good on the Selkirk line, and the return trip may be made likewise by means of a two-part ticket, one part good for the fare on the Selkirk line, and the other part good for the fare on the Winnipeg line, with one transfer, and during the said days children under 5 years of age, accompanied by parents or guardians, be carried free on the lines, and children over 5 and under 12 years of age, be carried on the same basis as adults, but with 7 two-part tickets instead of 4. The companies are to join in establishing arrangements for the care of such traffic and are at all times to furnish adequate car accommodation for the traffic.

### Montreal Tramways Mutual Benefit Association.

Following are extracts from the report for the year ended April 30, 1915:

Members disabled through sickness or injury .....	1,236
Visits made by physicians to disabled members .....	792
Consultations given by physicians to disabled members .....	7,509
Prescriptions issued .....	5,704
Paid for sickness and injury .....	\$11,407.89
Paid for medicine .....	1,758.18
Paid for pensions .....	891.00
Paid for withdrawals .....	588.36
Paid for death and burial insurance .....	9,200.02

The committee is pleased to report the expression of gratitude from the beneficiaries of deceased members of the Association for the prompt payment of the death and burial benefits. During the year five members requested to have their benefits commuted, which was agreed to by the committee.

The eleventh annual picnic under the Association's auspices netted a profit of \$7,699.40. The committee gratefully acknowledges a special donation of \$3,000 from the Montreal Tramways Co., making the total contributions received from the company \$19,015.82, which amount, added to the fees and dues received from the members, viz.—\$19,140.50, and the proceeds of the picnic, and the interest of investments and bank deposits, amounting to \$16,005.11, makes a total revenue for the year of \$54,161.43, and the expenses being \$33,854.43, leaves a surplus of \$20,307.00.

Revenue.	
Accumulated reserve from preceding years .....	\$136,154.40
Members' fees and dues .....	19,140.50
From company fees, \$390; dues, \$9,375.25; special donation, \$3,000.00; expenses of management, \$6,250.57.	19,015.82
Picnic .....	7,699.40
Interest on investment .....	1,827.77
Interest on bank deposits .....	477.94
	\$190,615.82

Expenditure.	
Sickness and injury .....	\$11,407.89
Deaths and burials .....	9,200.02
Medicine .....	1,758.18
Medical attendance .....	5,600.00
Medical examination .....	158.50
Withdrawals .....	588.36
Pensions .....	891.00
Management expenses .....	6,250.57
	\$33,854.43

Accumulated reserve .....	156,761.40
In bank .....	11,871.81
Invested .....	\$44,889.59
	\$31,522.80

J. E. Hutcheson, General Manager, is President of the Association, and Patrick Dubee, Secretary-Treasurer of the Company, is also Secretary-Treasurer of the Association.

## The Calgary Municipal Railway Investigation.

The presentation on Aug. 17 of Mr. Justice Simmons' report of his recent investigation into a series of charges made by Alderman Frost, against T. H. McCauley, Superintendent, Calgary Municipal Ry., effectively disposed of a matter which has been the cause of considerable discussion for several months. The charges made were 14 in number, and were as follows:—(1) Breach of faith with the men; (2) Ignoring instructions of the City Council; (3) Discrimination by suspension or dismissal of "round robin" men upon trumped-up charges, while ignoring the same offences on the part of others; (4) Failure to dismiss or suspend pets although guilty of serious offences; (5) Interfering contrary to agreement with the grievance committee by blocking its decisions; (6) Adopting the German espionage system; (7) Condoning the presence of street railway employees in uniform in bars by not enforcing the rules prohibiting this; (8) Constituting it an offence for certain employees to be seen speaking to Aldermen Frost, Crandell or Jennison; (9) Influencing witnesses; (10) Bringing reproach upon the Mayor, aldermen and civic administration by unseemly conduct before the City Council, the Street Railway Association and at other public places; (11) Receiving salary for weeks of lost time while at Banff; (12) Interfering with and seeking control of the Employees' Sick Benefit Association; (13) Incompetency—(a) By allowing illiterate and unskilled foreigners to handle electric current; (b) By wasting current through defective construction, and (c) By destroying watermains through unnecessary electrolysis; (14) Seriously jeopardizing the city's interests by re-employing men who were involved in an accident on the line in which two lives were lost.

It will be seen that the majority of these charges covered the relationship existing between the Superintendent and the men, while the remainder had to do with the Superintendent himself. Of these latter, the charge was withdrawn, and no evidence was offered upon section c of charge 13. Evidence was given in support of Alderman Frost's allegations by 37 witnesses, and by 24 witnesses on behalf of Superintendent McCauley. The evidence showed that all the charges in which the employees were concerned centered around some half dozen men, who sought to dominate the men's association, and to dictate to the management. The association is independent of any federated body of street railway employees, and it has been and continues to be the policy of the management to keep it free from outside interference,—the railway being owned by the city, and the employees all duly qualified provincial constables. The half dozen or so trouble-makers were got rid of in February, and from that time, until the investigation was ordered in June, Alderman Frost kept making complaints, which it was finally thought desirable to have a stop put to by a judicial enquiry. The evidence showed that the whole affair was of the most trivial description, and the findings, even where any of the complaints appear to have had some cause, show that the Superintendent has been doing his work well and conscientiously in accordance with the free hand which he has had in the management of affairs since the railway's inception.

The findings in which it is said there is some ground for complaint against Mr. McCauley are:—(1) He was wrong in requiring the men who had signed the "round robin" to sign an application again acknowledging that they had no right to appeal. (2) The only discrimination against the signers of

the "round robin" was as in finding to complaint one. On section B of complaint 13, Mr. McCauley must share the blame along with the engineering and public works departments of the city service for poor construction on the bases for the railway on certain streets laid during a "period of reckless prodigality," when "quantity" rather than "quality" of work was the policy of the administration. These, it will be seen, are minor points, even when the character of the whole charges are considered. The judge exonerated Mr. McCauley on all the other charges. The final results:—Charges made, 14; of which one is sustained; section two of charge 13 is sustained to some extent; one charge is withdrawn, and all the others are dismissed.

The judge's report contained a second part making some observations upon the working of the railway, for the purpose of creating discussion. It will be taken up at an early meeting of the City Council.

Since the removal of the half dozen or so men in February the relationship between the management and the employees has been most harmonious, as is evidenced by the fact that among other things the employees have contributed the cost of a machine gun for the Canadian troops, and that they are contributing to the patriotic funds, and assisting with comforts, those of their own body who have enlisted for overseas service.

## Brantford Municipal Railway Half-Yearly Report.

The commissioners appointed under the provisions of the Brantford, Ont., city by-law, have submitted a report for the six months ended June 30, the details of which are as follows:

Gross revenue	\$42,505 79
Expenditure	34,221 89
Net revenue	\$8,283 90
Bond and mortgage interest.	\$3,257 75
Debt interest on \$200,000	5,000 00
	8,257 75

The commission has assumed the following charges:	
Local improvement and tax for interest on pavements, first instalment.	\$ 1,251 00
Sinking fund	2,214 00
	\$ 3,465 00

The net result, after payment of interest and assuming the taxes and sinking fund, is a deficit for the six months of \$ 3,438 85

The commissioners express the hope that during the current half year, the line may come to be on a self sustaining basis. The rate per car mile earned on the city lines has increased from 14.7 to 17, and the bettered service, the extension to Eagle Place and the southern suburbs of the city, together with the traffic consequent on the acquirement of Mohawk Park, should all conduce to a larger earning in the future.

A system of accounting for all stores and supplies has been inaugurated, and the management is carefully watching all details tending to a reduction of operating expenses.

The expenditure for improvements and betterments during the six months was \$78,253.81, of which, the following are the chief items:

Eagle Place loop	\$23,847 01
New cars	14,607 53
Paris power plant	5,496 55
Rebuilding, etc., old cars	15,076 01
Grand Valley Ry., betterment	7,828 99
Rebuilding power house for terminal.	5,898 86
Completing Paris station	1,054 00
Sundries	4,118 55

The total valuation of the property under the commission, is \$455,327.11, with a liability including city pavement and tax account, of \$458,765.96. Practically all the funds, \$270,000, provided under bylaw, have

been expended, and further extensions cannot be undertaken until additional funds are provided.

The system is now operated entirely by hydro electric power furnished by the Hydro Electric Power Commission of Ontario, at Brantford, Paris and Galt, and through the facilities afforded by the improvements at the old power house, Brantford's street car and lighting utilities are virtually working together under one manager, although under two commissions.

## Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry., and allied companies.

	June 1915	June 1914	June 30, 1915	June 30, 1914
Gross earnings	\$498,093	\$661,383	\$7,306,563	\$8,789,287
Expenses	494,315	509,417	5,994,212	6,449,825
Net earnings	3,778	150,966	1,312,351	2,348,462

The directors have announced that owing to the large decrease in the earnings, they are unable to recommend any further dividends on the preferred and deferred ordinary shares for the year ended June 30. It will be noticed in the foregoing table that the net earnings decreased by \$1,036,111, as compared with the previous year, this being a little over 44%. Rather more than two-thirds of this decrease took place during the first half of 1915.

Hamilton St. Ry. The gross earnings for the quarter ended June 30, were \$130,627.77 against \$154,846.57 for the same period 1914. The amounts paid to the city as percentage on these earnings were \$10,450.21 and \$12,387.72 respectively.

London St. Ry.

	June 1915	June 1914	Jan. 1 to June 30, 1915	Jan. 1 to June 30, 1914
Gross earnings	\$38,301.11	\$38,456.05	\$186,260.51	\$177,829.10
Expenses	23,473.71	23,572.55	134,613.26	128,996.60
Net earnings	9,827.40	9,883.50	51,647.25	48,832.7

	July 1915	July 1914	July 31, 1915	July 31, 1914
Gross earnings	\$36,795.52	\$34,134.48	\$223,056.03	\$211,968.58
Expenses	23,666.38	24,278.04	153,279.64	153,274.64
Net earnings	13,129.14	9,856.44	69,776.39	58,693.94

Toronto Ry., Toronto and York Radial Ry., and allied companies.

	June 1915	June 1914	Jan. 1 to June 30, 1915	Jan. 1 to June 30, 1914
Gross earnings	\$787,558	\$861,938	\$4,810,063	\$5,025,926
Expenses	388,013	445,150	2,540,317	2,614,259
Net earnings	399,545	416,788	2,269,746	2,411,667

Toronto Ry.—Under the trust deeds of Sept. 1, 1892, 306 of the 4½% sterling bonds, and 79 of the 4½% currency bonds were drawn for payment, Aug. 31.

The receipts of the Toronto Ry. from Jan. 1, and the percentages paid to the city, for 1915, compared with those for 1914, are as follows:

	1915	City percentage	1914	City percentage
Jan....	\$ 471,226	\$ 70,486	\$ 501,844	\$ 75,277
Feb....	440,314	67,047	461,274	72,060
Mar....	488,468	93,141	530,751	102,153
Apr....	467,702	93,540	501,435	100,287
May....	468,953	93,790	534,465	106,893
June...	450,582	90,116	525,033	105,106
July...	440,086	88,821	495,882	103,772
	\$3,236,331	\$596,941	\$3,550,684	\$605,545

Winnipeg Electric Ry.

	June 1915	June 1914	Jan. 1 to June 30, 1915	Jan. 1 to June 30, 1914
Gross earnings	\$255,549	\$335,012	\$1,752,256	\$2,091,582
Expenses	170,904	187,570	1,130,612	1,213,702
Net earnings	84,645	147,442	621,644	877,880

The Public Service Corporation of Quebec, which was incorporated under the Quebec Companies Act in June with an authorized capital of \$3,000,000, has bought at sheriff's sale the Dorchester Electric Co.'s plant and business and intends distributing electric power in the City of Quebec and its vicinity. We are officially advised that it has no intention of building any railway. The officers, J. C. Smith, President; H. Murray, Vice President; W. S. Hart, Treasurer; and Jas. Wilson, Secretary, are all connected with the Shawinigan Water & Power Co.

## Electric Railway Projects, Construction, Betterments, Etc.

**Brantford Municipal Ry.**—Power supplied by the Hydro Electric Power Commission of Ontario is being used for the operation of the Brantford Municipal Ry., the contract with the Western Counties Electric Co. having been terminated July 31. (July, pg. 277.)

**Calgary Municipal Ry.**—We are officially advised that the paving work on a quarter of a mile of track in the city is in progress. T. H. McCauley is Superintendent. (Aug., pg. 318.)

**Chatham, Wallaceburg and Lake Erie Ry.**—We are officially advised that the company is contemplating the building of two sidings, each 300 or 400 ft. long, on the main line near Cedar Springs, Ont., for the loading of sugar beets, etc., and a freight shed, about 90 by 24 ft., in Chatham. W. Norris, Chatham, Ont., General Manager.

**Edmonton Radial Ry.**—We are officially advised that 6,400 ft. of permanent track is being laid on Portage Ave., Edmonton, Alberta. L. E. Smeaton is acting Superintendent. (Aug., pg. 318.)

**Hydro Electric Power Commission of Ontario.**—The village of Port Dover, Ont., has joined the Greater Hamilton and Lake Erie branch of the Ontario Hydro Electric Railway Association, with the object of promoting the building of an electric railway from Hamilton to Port Dover.

Following up the reported negotiations with the Chatham, Wallaceburg and Lake Erie Ry., and with the Toronto Suburban Ry., it was reported from Hamilton recently that there was an idea of the Dominion Power and Transmission Co.'s electric railways and power plant being taken over, but the Vice President, W. C. Hawkins, is reported to have stated, Aug. 4, that no negotiations were going on. (Aug., pg. 318.)

**Montreal and Southern Counties Ry.**—We are officially advised that the company has placed an order with the Canadian Westinghouse Co., Hamilton, Ont., for a synchronous motor generator set and transformers. The company is building a sub power station at Granby, Que., for the operation of the extension now under construction from St. Cesaire, Que. (Aug., pg. 318.)

**Niagara, Welland and Lake Erie Ry.**—The ratepayers of Welland, Ont., have sanctioned an agreement between the Town Council and the company, by which the latter is to pay \$60,000 in 20 annual instalments as its share of the cost of street paving. (May, pg. 190.)

**Quebec Ry., Light and Power Co.**—The Quebec City Council is considering steps to compel the company to extend its lines in Limoilou, Beauport and Charlesbourg. The city attorney has advised the Council that the city has power under the agreement to compel the company to build its lines to the city limits. (Aug., pg. 318.)

**Sandwich, Windsor and Amherstburg Ry.**—We are officially advised that the company has under construction half a mile of double track on London St., Sandwich, Ont. (July, pg. 277.)

**Saskatoon Municipal Ry.**—The removal of the street railway track on Lansdowne Ave., Saskatoon, Sask., from the side to the centre of the street was reported to have been completed Aug. 12. About 1,000 ft. of track has been removed.

**St. John Ry.**—Commissioner Potts reported to the St. John, N.B., City Council, July 31, that the company had made considerable repairs on the Mill St. line. Subsequently repair work was started on Douglas Ave., and arrangements made for doing other

work on the several lines which the Commissioner reported as needing immediate repair, July 26. (Aug., pg. 318.)

**The Galt, Preston and Hespeler St. Ry.** has protested to the Berlin, Ont., City Council against the charge of \$75 a month proposed for the use by the G., P. and H. S. R. for rights on King st. from the city limits to Water St., and along Wilmot St. The matter is being considered by the Council committee in charge of the operation of the Berlin and Waterloo St. Ry., in consultation with M. N. Todd of the G., P. and H. S. Ry., with a view to an amicable settlement. It is reported that in the event of a settlement not being reached the company will use a branch line running to Waterloo exclusively, and erect a station on Queen St. South for the accommodation of city passengers. (April, 1914, pg. 184.)

**The Toronto Ry.** applied to the Ontario Railway and Municipal Board, Aug. 20, for permission to extend its Yonge St. line north through the subway under the C.P.R. and up to Farnham Ave., the present southern terminus of the Toronto and York Radial Ry.'s Metropolitan Division. In consequence of the city's opposition the hearing of the application was postponed until Aug. 26.

**Toronto Civic Car Lines.**—Tenders are under consideration for the rods and plates and for special track work on the Lansdowne Ave. extension of the civic car lines, and for machine shop equipment at Danforth Ave. car barns. (Aug., pg. 318.)

**The Windsor, Essex and Lake Shore Rapid Ry.**, we are officially advised, is doing some paving work along its lines in Essex, Ont. (July, pg. 277.)

## Regina Municipal Railway, History and Statistics.

A Municipal Manual for 1915 compiled by the City Clerk of Regina, Sask., gives the following particulars:

The construction of the street railway as a municipal enterprise was projected in 1910. Actual construction began in the early part of 1911 and operation of cars was commenced July 29, 1911. At that time the system consisted of about 6 miles of track and 6 cars. Now there are about 30 miles of track within the city limits, 14¾ miles of this being in pavement. The rolling stock is as follows: 34 passenger cars, 2 sweepers, 1 motor haulage car, 30 freight cars.

Total expenditure up to Dec. 31, 1914, was \$1,723,830.00, of which \$266,065.00 was for cars and car equipment.

Operation statistics for the year 1914 are as follows:

Revenue passengers carried .....	4,677,512
Transfer passengers carried .....	626,905
Total .....	5,304,447
Passenger car mileage .....	1,081,996
Other car mileage .....	37,313
Total .....	1,119,309
Passenger revenue .....	\$200,500 77
Other revenue .....	18,415 10
Operating expenditure .....	\$218,915 87
	\$221,506 39

"An adequate service is given to and from all parts of the city. At present, on account of the concentration of the greater part of the population within easy walking distance of the retail business district, a comparatively low percentage of the people are making use of the street cars. However, with the city's development this utility will prove to be one of its most valuable assets."

## Electric Railway Notes.

Superintendent T. H. McCauley, in a report to the City Commissioners, Aug. 13, recommended certain alterations in routes of cars on the Calgary, Alberta, Municipal Ry., estimated to effect a saving of \$50 a day in operating expenses.

The ratepayers of Rockwood, Man., voted by a majority of seven to one, Aug. 10, in favor of the operation of electric cars on Sundays within the area of tp. 13, two and three east. Stonewall municipality will vote on a similar bylaw in the near future.

A board of conciliation is considering the question of the wages of British Columbia Electric Ry. employees. The board consists of Justice Macdonald, chairman; A. C. McCandless representing the company, and J. H. McVety the men.

The investigation into the relations between the officials and employees of the Calgary Municipal Ry., which was begun before Justice Simmons, July 8, was brought to a close, as far as the examination of witnesses was concerned, Aug. 2.

The Toronto and York Radial Ry. Metropolitan Division employees held their annual picnic at Bond Lake, Aug. 13, when there were about 800 present. The employees' executive committee has contributed \$100 from the picnic fund to the North Toronto Red Cross auxiliary.

The operation of the Saskatoon-Sutherland electric line is being discussed by the authorities of Saskatoon and Sutherland, Sask. It is understood that in addition to the approval of the ratepayers of these two towns, the approval of the ratepayers of Cory, through which the line passes, will be necessary.

The Edmonton City Council has appointed a committee to assist the Commissioner of Utilities in the operation of the Edmonton Radial Ry. until the special committee appointed to investigate the situation makes its report. The committee consists of Alderman Frith, chairman; Aldermen McArthur, Douglas and Sheppard.

**Ontario Accident Compensation to Electric Railway Employees.**—The first fatal case of injury to a Toronto Ry. employee since the Ontario Workmen's Compensation Act went into force was that of Frank McMullen, a conductor who died in July from injuries received by falling from the running board at the side of a car while collecting fares. He left a widow and three children. The compensation fixed by the Ontario Workmen's Compensation Board and which is payable by the company through the Board is as follows:—To the widow, \$75 for funeral expenses and an allowance of \$20 a month. Should she marry again she would receive a bulk sum of \$480, equal to two years compensation. For the children, \$5 a month each till they reach the age of 16 respectively.

**Ontario Government Aid to Hydro Electric Railways.**—In speaking at the dinner at London, Ont., after the opening of the electrified London and Port Stanley Railway, the Attorney General, Hon. I. B. Lucas, said that subsidies had been mentioned by the Chairman and that upon this he spoke with reserve. The highest patriotism, as well as the highest prudence, demanded that they keep in mind Mr. Lloyd George's statement that the last hundred million dollars might decide the issue of the war. While the war and unsettled economic conditions remained the Government was not prepared to undertake large capital expenditures.

**The Prince Edward Island Ry. Employees** are giving a machine gun for use in the Canadian Expeditionary Forces.

## Freight Tonnage Carried by Electric Railways.

Returns to the Dominion Department of Railways for the year ended June 30, 1914, show the following number of tons of freight as carried by electric railways:

British Waterloo, Wellesley and Lake Huron Ry. ....	180,801
Grand Island and Hamilton Ry. ....	4,943
British Columbia E.R. ....	356,013
Calgary Municipal Ry. ....	2,701
Canadian Electric Development Co. (Southern, Wallburg and Lake Erie Ry. ....)	5,000
.....	109,157
Corwall E.R. ....	74,690
Edmonton Radial Ry. ....	11,630
Grand Valley Ry. ....	298
Guelph Radial Ry. ....	23,130
Hamilton and Dundas E.R. ....	21
Hamilton, Glenside and Beamsville E.R. ....	40,931
Hamilton Radial Ry. ....	14,195
Hull Electric Co. ....	12,392
Leamington Ry. ....	3,250
London and Lake Erie Ry. and Transportation Co. ....	6,629
Montreal Tramways Co. (1911 figures) ..	302,307
Montreal and Southern Counties Ry. ..	8,431
Niagara Falls Park and River Ry. ....	2,833
Niagara, St. Catharines and Toronto Ry. ....	365,810
Oshawa Ry. ....	170,019
Port Arthur E.R. ....	14,190
Quebec Ry. Light and Power Co. (Citadel Div.) ....	1,140
Riverside Municipal Ry. ....	14,200
Sandwich, Windsor and Amherstburg Ry. ....	2,554
Sarnia S.R. ....	15,911
Suburban Rapid Transit Co. ....	573
Toronto and York Radial Ry. ....	62,334
Windsor, Essex and Lake Shore Rapid Ry. ....	39,840
Total .....	1,845,923

## Edmonton Radial Railway Superintendent Resigns.

For some time past there has been evidence of friction in the management of the municipally owned Edmonton Radial Ry. The matter has been frequently discussed at council meetings, and a few months ago it was decided that the Superintendent was to be given a free hand in the operation of the line, with the view of pulling the loose ends together, reducing the operating cost and at the same time giving an efficient service. Subsequent discussions in the council appeared to indicate that the free hand which was to be given was, to a great extent, withheld, and that there was considerable aldermanic interference in the management. This culminated in a notice of motion calling for the Superintendent's resignation, and suggesting that if it was not forthcoming, his services be dispensed with at the earliest legal date, and he be granted leave of absence until then, and also suggesting that the duties be undertaken by the Commissioner of Public Utilities, with a committee of the Mayor and not more than four aldermen to act in an advisory capacity, until an investigating committee reports, when a permanent policy would be adopted.

The motion was not made, but against the wishes of the Mayor, the resignation of the Superintendent was handed in.

J. H. Larmonth, who was appointed Superintendent of the Edmonton Radial Ry. in March 1914, had been, prior to going west, General Manager of the Electric Power Co., owning the Peterborough Radial Ry., the construction of which he was placed in charge of in 1904, and managed along with the electric light and gas plants at Peterborough, Ont., until the property was purchased by the Electric Power Co. in 1910, when he was appointed General Manager. Subsequently he was for some time Secretary of the Canadian Electrical Association. On Aug. 5, Mr. Larmonth, on the eve of leaving Edmonton for Toronto, was presented with an address and an engraved silver

turen, by the radial railway employees.

On another page in this issue is given a comparative statement of the operating results for the first six months of 1915 and 1914. The actual net operating result for that period increased from \$39,060.96 to \$66,673.88, even with a drop in the number of passengers carried, of from 7,537,760 to 5,486,472. For the 1914 period there was a deficit of \$125,077.32, while for the 1915 period this was reduced to \$75,722.50.

## Mainly About Electric Railway People.

J. J. Hackney has ceased to occupy the position of Commissioner of Utilities at Port Arthur, Ont.

H. T. Hazen, M. Can. Soc. C. E., District Engineer Mackenzie, Mann & Co., Ltd., Toronto, and Consulting Engineer, Toronto Suburban Ry., has taken over the duties of Chief Engineer of that line, vice E. T. Wilkie, A. M. Can. Soc. C. E.

P. Hamel, Secretary, Quebec Ry., Light, Heat and Power Co., Quebec, Que., has been appointed a captain in the 69th regiment for overseas service, and is at present in

F. T. Leversuch,  
Traffic Manager, London and Port Stanley  
Railway.

Montreal assisting in enlisting recruits for the service.

F. Morton Morse, Secretary-Treasurer, Winnipeg Electric Ry., returned to Winnipeg at the end of July, after a trip to Great Britain for the benefit of his health. He was a passenger on the s. s. Orduna, which was unsuccessfully attacked by German torpedo-boats.

G. R. G. Conway, M. Inst. C. E., M. Can. Soc. C. E., who resigned the chief engineering of the British Columbia Electric Ry. Co. and the Vancouver Power Co. recently, has opened an office at 409 Royal Bank Building, Toronto, for consulting practice in civil and hydraulic engineering.

Sir John Gibson, director, Dominion Power and Transmission Co., Hamilton, Ont., and former Lieutenant-Governor of the Province, was advised, Aug. 22, of the death, while on active service in Flanders, of his youngest son, Lieut. F. M. Gibson, who was wounded earlier in the war, but had recovered and returned to duty.

Frederick Thomas Leversuch, whose appointment as Traffic Manager, London and Port Stanley Ry., London, Ont., was an-

nounced in our last issue, was born at Shrewsbury, England, Nov. 24, 1884, and entered railway service in May 1905, since when he has been, to June 1910, in General Freight Department, Michigan Central Rd., St. Thomas, Ont.; June 1910 to Oct. 1911, assistant agent, C. P. R., Windsor, Ont.; Oct. 1911 to Dec. 1913, freight agent, C. P. R., Windsor, Ont.; Dec. 1913 to July 15, 1915, Agent, C. P. R., Windsor, Ont.

James J. Callahan, whose appointment as Manager of Operation, London and Port Stanley Ry., London, Ont., was announced in our last issue, was born at New Glasgow, Que., Feb. 25, 1875, and entered electric railway service, Apr. 27, 1897, since when he has been, to 1901, motorman, Montreal Park and Island Ry., Montreal; 1901 to 1908, Inspector and Chief Instructor, Montreal St. Ry., Montreal; 1908 to 1909, Chief Inspector, New York and Queens County Ry., Long Island, New York; 1909 to July 1915, Superintendent of Transportation, Montreal and Southern Counties Ry., Montreal.

The Ottawa Electric Railway Bulletin, the first number of which is dated August, and which is to be issued on the 20th of each month, consists of four pages of reading matter, each 8½ x 11 ins. Its chief function at present is to print important bulletins posted during the month previous to the issue, and also to give articles of general interest to those engaged in electric railway service in Ottawa. It urges efficiency, safety and courtesy, and devotes considerable space to hints on those points. The bulletins are published with comments, and one or two rules are printed with explanations pointing out their most important features. The Bulletin, which is no doubt largely the handiwork of F. D. Burpee, Superintendent, will be a valuable means of communication between the management and the employees.

Lloyd's Register for 1915-16 contains much information of considerable interest concerning the state of the world's shipping tonnage during war times. Notwithstanding the heavy losses of tonnage which have occurred during the war, there is an actual increase of 172,217 tons, in the vessels of more than 100 tons. The number of steamships increased from 24,444 of 45,403,877 tons, to 24,508 of 45,729,208 tons. There was a decrease in the sailing vessels, the numbers being 6,392 of 3,685,675 tons in the previous year, and 6,212 of 3,532,561 for the current year. The total tonnage of the British Empire increased from 21,045,049 to 21,274,068, being greater than the aggregate tonnage of the next seven countries. The second place in the list, which has been held for several years by Germany, is now taken by the United States, with a total of 5,892,639 tons, an increase of 524,445. Germany takes third place with 4,706,027 tons, a decrease of 753,269.

Canada Steamship Lines Ltd., has formed a War Contribution Committee, with F. P. Smith, Secretary of the company, as Secretary, for the following purposes, to assist by contributing machine guns and to encourage enlistment amongst the company's employees. At the inauguration meeting, it was announced that J. W. Norcross, Managing Director, and R. M. Wolvin, had each promised one machine gun.

Ontario Car Ferry Co.'s Car Ferry No. 2.—A preliminary trial trip of the Ontario Car Ferry Co.'s car ferry, Ontario No. 2, took place at Toronto, Aug. 28. This vessel, which is stated to be the largest yet built on Lake Ontario, is under construction by Polson Iron Works, Ltd., Toronto, and was fully described in Canadian Railway and Marine World for April, 1914.

# Marine Department

## The Grand Trunk Pacific Railway's Dry Dock at Prince Rupert, British Columbia.

The dry dock and ship repairing plant, which the G. T. P. R. has built at Prince Rupert, B. C., as a part of its railway and marine terminal facilities, was announced to be ready for business, Aug. 1. The selection and survey of the site was made in 1910, and the actual work of construction was commenced early in 1912. The dock is in three units, with a total lifting capacity of 20,000 tons. All the units are interchangeable, and each is complete in itself, with pumps and air compressors. The two end sections are each of 5,000 tons capacity, and the middle one of 10,000 tons capacity. When all three are joined, the dock will be capable of raising a vessel 600 ft. long of 20,000 tons.

The dock has an overall length of 604 ft. 4 ins. on the keel blocks, a clear width of 100 ft., and a width overall of 130 ft. The lifting power is the aggregate of 12 pontoons of timber construction, each 130 ft. long, corresponding to the width of the dock, 44 ft. wide in a direction corresponding to the length of the dock, and 15 ft. deep. These pontoons are united by steel side walls or wings 38 ft. high, 15 ft. wide at the bottom, and 10 ft. wide at the top, the walls being divided so that the whole structure may be used under ordinary conditions as three separate docks, one of 6 pontoons with an overall length of 269 ft., and two of 3 pontoons each, with an overall length of 164 ft. each. The machinery for pumping the dock consists of centrifugal pumps operated by electric motors, the capacity of the equipment being sufficient to pump the entire lifting power of the dock in two hours. The structure as a whole is secured to the shore by the engagement of clamps on the dock with a vertical truss secured to the pile platform or pier in such a way that it is free to rise and fall with the tide, and when being raised or lowered with the ship. The location of these attachments is such that when it is desired to use the dock in separate sections, the bow section may be detached and moved round the corner of the pier work located alongside the platform and secured in the same manner as provided in the original position. To make the other two sections available as separate docks it is only necessary to detach the middle section, comprising 6 pontoons, from the pier work and advance it the length of the detached section, when the sliding clamps upon the wings will coincide with those used for the previous section when the dock was operated as a whole. This will allow ample space between the centre and stern sections for the overhang without interference of vessels that may be docked in them.

The pumping machinery consists of 24 12 in. centrifugal pumps one in each end of each pontoon. They operate at approximately 275 r.p.m., being driven by a vertical shaft. All pumps on each side of each section are driven through gearing and horizontal shafting by one electric motor. Thus for the two smaller sections of three pontoons each there are four 100 h.p. motors, and for the larger section of 6 pontoons there are two 200 h. p. motors. These motors are of the alternating current, 3 phase, 25 cycle, 550 volt, with wound rotors and slip rings for variable speed control. The armature shaft is extended at both ends and operates the distri-

bution shafts through reduction gearing at approximately 275 r.p.m.

The power house has all the boilers and power plant required for the supply of all the electric current for the dry dock, shop equipment, compressed air plant and electric lighting equipment, under one roof, covering an area of 15,392 sq ft. There are six 400 h.p. water tube boilers with automatic stokers, chain grate type. The two main engines are of 900 h.p. each. The generators are 600 k.w., 3 phase, 25 cycle, 550 volt, alternating current, and two steam driven exciters, one of 50 k.w. and one of 25 k.w. capacity, direct current, 220 volts. There is also a motor driven exciter of 25 k.w. capacity, the motor for this being 35 h.p., 3 phase, 25 cycle, 550 volt alternating current, squirrel cage type. The air compressors have an air displacement of 1,580 cu. ft. of free air per minute, when operating at 150 revs., and are designed for a steam pressure of 175 lbs. a sq. in. and an air pressure of 100 lbs. a sq. in.

The boiler and blacksmith shop is 76 by 150 ft., the central part being 33 ft. wide, provided with a 15 ton travelling crane. The design is of the usual steel frame shop construction, with flooring of concrete, with complete and up to date tool equipment.

The machine shop is of similar design and built from the same plans as the boiler and blacksmith shop, the flooring also being of concrete with special foundations for heavy tools. The large tools are driven by individual motors, and the smaller tools are arranged for group driving. The building shed and woodworking shop are under one roof, and divided in two sections, the building shed being 86 by 300 ft. with a clear height under cranes of 50 ft. and under girders of 56 ft. The shop section is 80 by 300 ft., the ground floor being used for machinery and the upper floor for laving out. The office and administration building is 40 by 100 ft., of wood, 2½ stories high.

Complete details and plans of the dry dock and shops were given in Canadian Railway and Marine World for February, 1912.

**Furness Withy and Co.'s Report.** The report for the fiscal year ended Apr. 30, shows profits, including the amount brought forward from the previous year, of £806,195 19s. 1d. After charging directors' fees and income tax, there remains £784,876 17s. 3d., an increase of £32,927 7s. 8d. over the previous year. Three quarterly dividends at the rate of 10%, in addition to the usual half yearly preference dividend have been paid, leaving an available balance of £599,724 4s. 5d. Of this balance, £350,000 has been transferred to depreciation account, £15,000 to a superannuation fund just inaugurated, £10,000 divided among masters, officers and engineers of the fleet, in recognition of the extra strain and vigilance necessary during the war, £50,000 in payment of the fourth quarterly dividend at 10%, and £141,446 carried forward to the current year's accounts. The directors applied for £50,000 of the war loan issued in Nov. 1914, and have also applied for an additional £150,000 of the June loan. Subsidiary companies also applied for amounts in the war loans, making a total subscribed by Furness Withy and Co. and its subsidiaries, of £550,000.

## The Loss of the s.s. Cabot.

An enquiry was held at Sydney, N.S., recently, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. R. MacDonald and A. J. Morrison, as nautical assessors, into the foundering of the Dominion Coal Co.'s s.s. Cabot, in the Strait of Northumberland, off Prince Edward Island, on June 24.

The master, Jas. Lintlop, stated that the Cabot was a schooner rigged, single screw, steam vessel of 162 net tons and 465 tons gross, capable of a speed of about 8 knots, about 8 years old, and was equipped with triple expansion engines, and drew 12 ft. forward, 11½ ft. aft, light, and 18½ ft. forward and 13 ft. aft when loaded. He left Charlottetown, P.E.I., on the morning of June 14, light, for Sydney, and was on deck practically all the time. The weather was clear with light winds. He rounded Point Prim, and shaped a course to pass Indian Reef, after which the course was altered to clear Bear Point, about 4 miles. At 6 p.m. fog came on at intervals and remained so up to the foundering of the vessel. He left port without filling tanks, as was customary in fine weather; but about 9 p.m. he gave orders to fill them, which was done with the help of the pumps. The vessel listed slightly, as she ordinarily did when that operation was performed, and came back on an even keel; but again listed, and as this was unusual the tanks were sounded, when it was seen that there was about 18 inches of water over no. 2 tank. The pumps were operated, but without avail, the vessel continuing to list. In view of this, he ordered the boat lowered, and called all hands on deck, the ship having a list of some 40 degrees when the crew got in the boat, the rail of the poop on the port side being nearly awash. He stated that whilst hanging on to the davit guy, which had been freshly painted that day, he was swung overboard, and that is the reason he found himself in the boat. Upon being recalled, he averred that when in the boat he found there was one man left aboard the ship, and he returned in the dory with three others to get him off. The ship sank about 11 p.m., and they kept the boat before the wind, and were finally picked up by a schooner, after about 12 hours adrift. Questioned as to a statement made by the second engineer, he said that to his knowledge there was no leak in no. 2 tank, nor were the pumps used every six hours to empty that tank. He positively asserted that the ship never touched bottom nor struck any object, and therefore, his theory was that in the head sea prevailing the vessel strained herself and started some rivets, gradually increasing the injury so that a considerable flow of water took place, and that it was due to that that the ship foundered.

The second officer stated that he held no certificate, but had considerable experience at sea. He had been on deck on watch from 12 to 4 and 6 to 8 the day of the foundering; but not on the bridge, as the captain kept his watch while he was busy about the decks. He noticed nothing unusual, that the weather thickened intermittently from 6 p.m. until he went below. Upon being called on deck he found the vessel had listed to a sharp angle, and he went in the boat with the others. He was positive the ship did not strike whilst he was on watch.

The chief engineer deposed that he joined

the ship in March last, that the machinery was in good order; that he was on watch from 6 p.m. until the ship foundered. When he noticed the ship taking an unusual list he sent the fireman to call the second engineer, the steam diminishing in the meantime. He came on deck without shutting the valve, knowing that the engine would stop on account of the diminution of the steam. It took from 1½ to 2 hours to fill the tanks, which held 32 tons of water. Questioned as to the water which remained in no. 2 tank, occasioning pumping, he was of opinion that it was due to the fact that some water must necessarily stay in the tanks as the pump did not reach so close to the floor, and again it might be due to some dirt impeding the efficient working of the valves, and the probabilities were that the pipe joining the peak tank might be leaking at the joint. Upon being recalled, he denied in toto the assertion of the second engineer that the no. 2 tank had to be pumped every six hours for five minutes, if not regularly at least frequently.

The second engineer stated that he holds a fourth class certificate, that he had been on the Cabot for seventeen months. In his opinion the ship was leaking somewhere in the vicinity of no. 2 tank, that frequently, or almost every six hours, the pumps were in action for five minutes on that tank. Questioned as to the amount of water which could be pumped in five minutes, he could not say off hand. He could throw no further light on the matter, and his statement was not considered extremely satisfactory, being refuted by the chief engineer, and also by his predecessor, who had been acting in that capacity for about two years prior to March. The master also denied that such was the case, and stated that if pumping had been done, he was absolutely ignorant of it.

The court having carefully weighed the evidence adduced, which proved unsatisfactory in every respect, confesses that it remains in the dark as to the actual causes which brought about this casualty. In reviewing the evidence of the master, though he navigated his vessel inside of Point Prim buoy, nothing indicates that the vessel grazed the reef, thereby weakening the hull under no. 2 tank, and if she had touched and injured that part of her hull it is evident she would have received more serious damage further aft, as she was down by the stern. The court has questioned his action upon seeing the ship filling, for not steering toward the land instead of keeping her head on to the sea. Though, in our point of view, such method would have been a preferable one to adopt, it was only as a tentative way of trying to place the ship in shallow water, but owing to the water invading the engine room, steam being low, no speed could have been attained, and therefore, in view of these circumstances, we cannot condemn the master for his action in this respect. We look with askance at the fact that he was not the last man to leave the ship; that the wheelman was left on board; even though he went back to his rescue. Owing to lack of other evidence, we are bound to accept his statement that he was swung overboard, and the davit guy slipped through his hand. It was providential that the boat happened to be handy. With regard to the second engineer's evidence, which was contradicted by three witnesses, we are compelled to term his statement as an exaggeration. We are aware that the tanks cannot be thoroughly emptied; that there is a sweeping process taking place within the ship; that leakages are bound to occur from connecting pipes, increasing gradually the volume of water. The ship had been thoroughly inspected in the spring, and a certificate

of seaworthiness given. No reports were ever made by anyone from the ship to the company as to defects. As no evidence was given to shed the least light on this matter, the court has to make its own conjectures, based on the nautical experience of each member of which it is composed. At some time during that voyage the vessel must have struck or grazed some submerged object, dislodging the heads of rivets, unknown to the crew; that no effects were seen till the vessel, encountering a head sea, increased the injury the ship had already sustained. This was accelerated by the fact that the tanks were empty, and were not filled until after the ship encountered the head seas which it was said were prevailing at the time. It appears that it was customary to leave port with the ballast tanks empty, this having been done by other masters who were previously in command of this vessel. While we condemn that system, we cannot say that it was the direct cause of the foundering, but it helped considerably, as had the tanks been full it would have served as a strengthening protection to the hull of the ship at moments of straining. Yet, if our theory is correct as to the possibilities of some rivets being loosened through unknown reasons, a leak would have sprung up later. For lack of contradiction of the evidence adduced as to the way the ship foundered, while we question the methods adopted, it is our present duty to allow the benefit of the doubt. With regard to leaving port without the tanks being filled, while the vessel had no cargo, we consider the method unseamanlike, especially owing to the peculiar construction of the vessel, and the time it took generally to fill the tanks, viz.: two hours. We cannot overlook this phase of the disaster, and as we have before stated that this contributed to the foundering, we shall be lenient in our dealings with the master, owing to the fact that it was a customary thing to do during the summer, and therefore suspend his certificate for three months from July 15.

#### Cruiser Sterns on Merchant Vessels.

C. H. Nicholson, Manager Grand Trunk Pacific Coast Steamship Co., Ltd., Vancouver, B.C., writes Canadian Railway and Marine World as follows:—"In your August number you quote from some New York shipping paper that 'the only correct cruiser sterns built on merchant vessels up to the present are the Canadian Pacific steamships Empress of Russia, Empress of Asia, Metagama, Missanabie and Princess Irene, and the Allan Line steamships Alsatian and Calgarian,' to which apparently you have added 'The C.P.R. Princess Margaret, a sister vessel of the Princess Irene, should be added to this list.'

"Knowing your desire that statements made in your paper should be correct, I beg to inform you that as far as my knowledge goes the first instances of cruiser sterns being installed in merchant vessels were on the Grand Trunk Pacific steamships Prince Rupert and Prince George, built by Swan, Hunter & Wigham Richardson, Ltd., Newcastle-on-Tyne, in 1910. The cruiser stern was adopted for our ships after exhaustive tank tests, with the result that the cruiser stern gave one half knot an hour more speed with the same power than the ordinary round stern, and as the results of these tests were made public I assume the other lines have seen the advantage and copied the idea from the Grand Trunk Pacific."

The New York Central Rd. is reported to have decided to build a reinforced concrete dock at Buffalo, N. Y., at a cost of \$30,000.

#### The Loss of the Canadian Northern s.s. Royal Edward.

The British Admiralty announced, Aug. 17, that the s. s. Royal Edward had been torpedoed and sunk by the Germans in the Aegean Sea towards the approach to the Dardanelles, Aug. 14, while transporting reinforcements for the troops engaged on the Gallipoli peninsula. The reports indicate that there were about 1,000 lives lost.

The Royal Edward, which had been operated on the Atlantic route, between Montreal, Quebec and Avonmouth, in the summer, and from St. John in the winter, by Canadian Northern Steamships Ltd. since the commencement of 1910, was requisitioned by the Admiralty in Nov. 1914, and was one of the vessels engaged in transporting the Canadian Expeditionary Force to England. After this service, she was used for some time as a prison vessel for interned Germans, until such time as other arrangements ashore could be made. Since then she has been engaged in various services, latterly in transporting troops to the Dardanelles, this being her second voyage.

She was formerly known as Cairo, was originally built for the Mediterranean trade, and with her sister vessel, Heliopolis, was acquired by Canadian Northern Steamships Ltd. in 1910. They were returned to the builders to have certain alterations made, which were considered necessary for Atlantic service, and their names changed to Royal Edward and Royal George, special permission having been obtained for the use of the word Royal. She was of steel, her length was 545 ft., breadth 60¼ ft., depth to shelter deck 38 ft., with the hull divided into 10 watertight compartments and with cellular double bottom from stem to stern. There were seven decks and the whole vessel was luxuriously equipped. The propelling machinery consisted of compound steam turbines supplied with steam by four double ended and four single ended boilers of the cylindrical return tube type.

Lieut. Wooten, R. N. R., who had been in command of the vessel since her acquisition by the C. N. S. Ltd., was on board as navigator, and, at the time of writing, his name has not appeared as one of the survivors.

**Toronto Harbor Contracts.** The Minister of Public Works, when in Toronto, Aug. 11, conferred with members of the Canadian Stewart Co., relative to complaints as to the quality of the work done under certain sub contracts in Toronto harbor. The Minister is reported to have stated that Government inspectors had failed to report deficiencies, such having been reported by the Chief Engineer of the Toronto Harbor Commission, who was well within his province in reporting. The defective work was not trifling, but was not so extensive as to be alarming. An investigation of the defective work is being made and the report will be submitted to the Department in due course.

**Jitney Ferries at Toronto.**—In order to cope with what is considered to constitute a danger, a clause was inserted in the Toronto city bylaws for regulating and licensing ferries, providing that no ferry boat not heretofore having received a license from the city shall hereafter be licensed unless its Government certificate entitle it to carry at least 300 passengers. During the discussion of the bylaws, the section quoted was dropped, and the bill passed without it. A considerable ferry business of the "jitney" type has grown up between Toronto and Toronto Island, small gasoline boats being utilized for the purpose.

## Shipping Letters From the Head of the Lakes.

F. and W. Jones, brokers, Fort William, Ont., have issued weekly letters as follows:

**July 31.**—Eight cargoes of coal were unloaded during the past week, six bituminous and two anthracite; four were in U.S. bottoms, and four in Canadian bottoms. One cargo of anthracite is now being unloaded; it is a U.S. bottom. Two Canadian steamers, both with bituminous coal, are reported en route, one goes to the C.N.R. dry dock and one to the Fort William coal dock. There has been no marked increase in shipments to the west, but they will undoubtedly pick up considerably in the near future, as dealers in the west will soon have to replenish stocks in view of winter's demands, and it is expected that this movement will start when cars are demanded in the west for the new grain crop. The taking over of the Lake Superior Branch of the G. T. Pacific Ry. and terminals by the Dominion Government has now become effectual, and two cargoes of coal have arrived, billed to the Canadian Government Railways. A U.S. steamer loaded a cargo of coal screenings (about 3,000 tons) at the Canadian Pacific dock this week; the cargo was billed to a Lake Michigan port. One cargo of ore was shipped this week in a Canadian steamer, and was consigned to Cleveland. No further charters are reported. Seven vessels have loaded cargoes of grain since last Monday, four of which were passenger vessels, all of these cargoes were billed to Canadian ports. The elevator stocks are reported as 3,394,147 bush. of all grains, thus showing only moderate decrease from last week's report. Arrivals from the west have been only moderate. The eastern shipments have totaled 1,412,174 bush. At this rate a steady depletion of stocks is evident, and very little grain will be held in elevators by the time new crop arrives. Weather conditions throughout the west have considerably modified, and are generally considered satisfactory for harvesting. Reports to hand denote a moderate percentage of damaged crops, which will probably have the effect of reducing the Government grading of a portion of the crop. This, however, will in no way effect the total crop results. It is understood that exporters have already commenced figuring on a volume available for export beyond any previous records. Harvesting will commence early in August, and is expected to become general throughout the west by the 20th. In view of this, railway companies have already lined up their car supplies at easily available western points.

Stocks on hand, receipts, and shipments during the week:

	Stocks.	Receipts.	Shipments.
Wheat .....	1,667,472	624,797	998,443
Oats .....	476,427	265,080	369,891
Barley .....	44,306	28,844	27,620
Flax .....	1,205,942	28,115	16,215

**Aug. 7.**—Coal arrivals show a slight falling off during the first week of August, only six cargoes arriving, as against eight in the last week of July; five of them were bituminous, and one anthracite. Three were carried in U.S. bottoms, and three in Canadian. One steamer with anthracite coal is waiting turn, and four are reported en route, all with bituminous coal. There is no change in the western coal situation. Car shipments are still very light, and no big movement is looked for until the grain begins to move down to these ports freely. No ore was shipped east this week. One charter is reported to load during the early part of next week, probably for Cleveland. There will likely be another load the end of next week or early the week later, but no definite charter is reported. Seven ves-

sels have loaded grain cargoes during the week, all of which were billed to Canadian ports. This is the second week in succession which has been marked by an absence of U.S. billing. The total amount shipped east is reported as 862,670 bush., and shows a considerable decrease on the past several weeks. Elevator stocks at the two ports stand at 3,124,271 bush. of all grains, and show a slight steady decrease. Receipts from the west are also steadily declining. There appears to be no disposition on the part of shippers to make any great movement with the balance of old stocks, all attention is directed to the prospects of the new crop, and in consequence enquiry for lake space is weak and uninteresting. The week under review opened up with most favorable weather conditions all through the western provinces; later, however, there was more or less unsettled conditions, followed with rain and slight frost in Saskatchewan. This has by no means affected the optimistic feeling among grain men; a full crop is considered as now assured, whilst it is conceded that there will probably be a percentage of low-grade grain in consequence of the unsettled weather conditions. Harvesting will be in progress generally throughout the west by the 20th of the month. During the coming week harvesters' trains are scheduled to arrive from the east carrying all available help for the various western centres, and whilst help will not be in excess, there is not expected to be any lack of harvesters. The new crop movement is now expected to be well on its way early in September.

Stocks on hand at date, receipts and shipments during the week:

	Stocks.	Receipts.	Shipments.
Wheat .....	1,363,817	372,777	676,431
Oats .....	504,998	151,296	122,825
Barley .....	63,051	46,519	28,734
Flax .....	1,194,455	13,653	25,180

**Aug. 14.**—Coal receipts brightened up during the second week of August. 9 cargoes were unloaded, as against 7 last week, 7 of these were bituminous and two anthracite. Four were carried in Canadian steamships and five in U. S. Two steamships are reported as en route, one anthracite and one bituminous. The western coal situation is practically unaltered, the only change being an increase in the shipment of steam coal, which is used in harvesting. As the harvesting becomes more general the shipments will become heavier and will naturally decrease the stocks of bituminous coal at the head of the lakes. Two cargoes of ore were shipped east during the week, one to Cleveland, the other to Cleveland and Buffalo. They totaled about 8,000 tons. No further charters are reported.

Eleven vessels have loaded grain during the past week, two of which were billed to Buffalo and were U. S. bottoms. The total amount reported as shipped east was 1,062,611 bush. of all grains, being a considerable increase over last week's shipments. Receipts from the west continue to show steady decline, only 276,744 bush. having arrived during the week. Elevator stocks are in consequence becoming materially depleted, only 2,340,739 bush. being reported as held in store at time of writing. All reports arriving of the crop prospects are most optimistic and it is confidently felt that a bumper harvest is assured. Weather conditions have been most favorable, universally warm throughout the west accompanied with only moderate rain fall. Commencement of harvesting is placed at from Aug. 19 to 21, according to districts, but will be general throughout the provinces by the latter date. Large quantities of machinery

and general supplies are being rushed forward in anticipation, it is also estimated that ample help is now in sight. General movement of the crop to the head of the lakes should be in progress early in September. Market prices continue firm and it is expected that farmers will market their crop at good prices, and a wave of prosperity is looked for in the west, which should put things generally on a most satisfactory basis. Stocks on hand at date, receipts and shipments during the week:

	Stocks.	Receipts.	Shipments.
Wheat .....	616,606	168,073	915,284
Oats .....	490,535	82,942	97,405
Barley .....	36,771	16,155	42,760
Flax .....	1,196,827	9,574	7,162

## Canadian Pacific Ocean Services, Ltd.

The announcement of the incorporation of Canadian Pacific Ocean Services Ltd. has already been made in Canadian Railway and Marine World. The company has an authorized capital of £2,000,000, and has power to acquire and operate ocean steamships, and to interchange traffic with railways. The company is subsidiary to the C. P. R., and the latter's charter has been extended to enable it to hold stock and securities of the new company, and to guarantee payment of principal and interest of such securities as may be issued with the consent of C. P. R. shareholders. Canadian Pacific Ocean Services Ltd. will take over the C. P. R. interest in all steamships engaged in ocean traffic and also those of the Allan Line Steamship Co., which has been under C. P. R. control for some time. A moderate estimate of the value of the steamship property involved in the transaction, after making due allowance for depreciation, is \$23,500,000. It is proposed that in consideration for the steamships and appurtenances acquired from the C. P. R., and for the capital stock of the Allan Line Steamship Co., carrying with it all the company's steamships and other properties, the C. P. R. shall accept the fully paid capital stock of the Canadian Pacific Ocean Service Ltd., viz., £1,962,910, being all the shares except those necessary for directors' qualifications, and in addition shall accept 5% debentures, first debentures or debenture stock of the steamship company for £2,865,860.

The s.s. *Midland Queen*, owned by Canada Steamship Lines, Ltd., and under charter to the Dominion Iron and Steel Co., was torpedoed by the Germans, Aug. 3, while en route to Newport, Monmouth, Eng. She was built at Dundee, Scotland, in 1901, and was a steel vessel equipped with triple expansion engines with cylinders 18 x 30 x 50 x 36 ins., supplied with steam by 2 Scotch boilers at 170 lbs. pressure. Her dimensions were, length 249 ft., breadth 42 ft. 7 ins., depth 20 ft. 6 ins.; tonnage, 1,993 gross. 1,349 register. She was formerly owned by the Midland Transportation Co., Midland, Ont., which was absorbed by Inland Lines, Ltd., which in turn was absorbed by Canada Steamship Lines, Ltd.

The special crew which were engaged last April, at Halifax, N. S., to take the ice breaking steam tug J. T. Horne, to Archangel, Russia, returned to Halifax at the end of July. They report that the icebreaking s. s. *Canada* (formerly *Earl Grey*) has done good work in the harbor at Archangel, but broke down and had to be sent to England for repair. She is again in service.

Navigation on the Rideau River this summer has been seriously interfered with owing to low water. The *Rideau Queen*, which was running on the route has been taken off on this account.

### Grounding of the s.s. Haddington.

A formal investigation into the grounding of the Canada Steamship Lines s.s. Haddington on the eastern reef of Red Island, in the River St. Lawrence, June 4, was held at Kingston, Ont., recently by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. T. O'Connor and Jas. Murray, as nautical assessors. The chief witness, Joseph Blais, who was in charge of the Haddington at the time of the casualty, as sailing master, although summoned by his principals on instructions from the Wreck Commissioner, did not appear.

It appeared from the evidence that the master, R. J. Wilson, holds a master's certificate for inland waters, and a mate's certificate for coasting waters, and owing to his lack of qualifications as master coasting, his owners engaged, through the representatives of the Anticosti Island Agency, a man named Joseph Blais, holding a certificate in the coasting trade, who was signed on the articles as sailing master. The Haddington was loaded with 1,908 tons of coal, and was bound from Ashtabula to Gaspé. After passing Cape Salmon, the master left the deck, giving instructions that he be called if the weather became thick. The weather was then perfectly clear and calm. He was later awakened by a shock, and immediately went on the bridge, the vessel having stopped in the meantime by order of the officer on the watch. The sailing master appeared excited, and gave as a reason for the grounding the excuse that he thought he had allowed sufficient in shaping his course to clear the reef. It being flood tide, the vessel floated off, and when soundings were taken it was found that no. 1 hold was filling rapidly, and later no. 3 was found to be leaking. The officer of the watch and wheelman gave corroborative evidence, and the court, considering that sufficient had been submitted, adjourned sine die in the hope that the sailing master would put in an appearance. As, however, no word had been received from him, the court gave judgment as follows, on July 23:

The master and his officers were strangers in the River St. Lawrence below Quebec, and the owners of the Haddington, in order to relieve them of the responsibility of navigating the ship, on the recommendation of the Anticosti Island Agency, accepted the services of a man fully qualified in so far as he possessed a proper certificate, to assume the navigation of the ship into the Gulf, and such being the case, we are of opinion that the master, in view of the exceptionally fine weather prevailing,

was within his rights in securing as much rest as possible in order to be in a fit state to take charge in case of emergency, having left proper orders before leaving the bridge. The first officer, also a stranger in that locality, depended altogether upon the so-called pilot and there was nothing to cause him to be suspicious of the efficiency of the pilot and the effectiveness of the courses given. Everything being in full sight, there was no cause for interference or remarks on his part. Therefore, for the foregoing reasons, we hold that neither the master nor the first officer in charge are to blame for this casualty, and exonerate them from blame. With regard to the sailing master, whose evidence has not been heard, but who was undoubtedly in full command at the time of the stranding, we hold that in view of the strong flood tide running at the time, he did not allow sufficient margin for the effect of such tide on his vessel. This in itself is considered an error of judgment. Had it happened in misty weather, when objects are indistinct, this court would have been inclined simply to censure him, but in this case, objects were visible plainly, but evidently bearings do not seem to have been taken, and estimation of distances were neglected. In view of this we are of opinion that proper seamanship and good judgment were not exercised, and therefore suspend the master's certificate of Joseph Blais, sailing master of the Haddington, for four months; for his contempt of court he is liable to imprisonment, but the court will use the power which it has under statute, and further suspend his master's certificate for two months, which in all precludes him from navigating a vessel as master or officer of any grade from July 8, 1915, to Jan. 8, 1916. By this finding we hope to cause all those who may be called upon to appear before the Wreck Commissioner's court at a specified date, to obey the summons, whether given directly under the hand and seal of the Wreck Commissioner or through the principals, or agents, or owners of vessels, casualties to which are being investigated.

**Port Dalhousie-Toronto Car Ferry.**—With reference to the Canadian Northern Ry.'s intention to establish a car ferry service between the Niagara, St. Catharines & Toronto Ry.'s Lake Ontario terminus at Port Dalhousie and Toronto, we are advised that nothing will be done before the autumn. The C.N.R. was in negotiation with the C.P.R. for one of the car ferries used formerly between Windsor and Detroit, and also in regard to some other car ferries, but no purchase has been made.

### Quebec Harbor Commissioners Report for 1914.

The report for 1914 covers the work accomplished during the year in connection with the general improvement of the harbor facilities. The new administration building on Point a Carcy wharf was completed and occupied. The revenue was \$287,194.39, an increase of \$54,859.66 over 1913, and the expenditure chargeable to revenue was \$267,835.54, leaving a surplus of \$19,358.85. There is included in the revenue a charge of \$50,000 against the Dominion Government for building used by the Immigration Department. The expenditure on capital account on approved estimates out of advances made by the Government was \$1,994,960.03, and out of money at the Commissioners' disposal, \$17,341, making a total capital expenditure of \$2,012,301.03. The increase of railway traffic in the port necessitated the purchase of an additional switching locomotive. During the year, 53,907 cars were handled, of which the car ferry handled 18,485. The immigration and ocean passenger traffic required 5,560 passenger and baggage cars. The number of vessels arriving and departing from the dock was, inward 387, of 1,569,426 register tons; outward, 131 of 692,649 register tons. The grain handled at no. 2 elevator was, oats 531,815 bush.; wheat 43,233 bush.; corn 179,080 bush.; barley 12,000 bush., a total of 766,128 bush. Of a total of 98,834 passengers landed at Quebec during the year, 7,819 were first class, 35,407 second, and 55,608 third class.

The shed space available for ocean vessels is 5,000 ft. long, averaging 91 ft. wide. The river remained clear of ice until Dec. 9, by which time vessels were in their winter quarters.

**U. S. Marine Policy and U. S. Shipping on the Great Lakes.**—A Chicago vessel owner in commenting on the Seaman's Act, which comes into force in the U. S., Nov. 4, writes to the press, partly as follows,—"Unless the seaman's bill is modified the Great Lakes lines are practically forced out of business after Nov. 4. We have built up the finest passenger and packet freight service in the U. S., all tending to maintain lower railway rates, only to see the service annihilated or handed over to Canada, by Senate bill 136. Our most substantial point of opposition to this bill is that it fails to discriminate between, for example, a Great Lakes excursion steamer, always in sight of land, travelling in shallow water, and with passing ships invariably in sight, and the seagoing liners travelling from New York to Bombay."

## Repair Work, Etc., in Shipbuilding Yards.

The following information has been supplied in response to our enquiries:

**Davis Dry Dock Co., Kingston, Ont.**—The present season is quieter than usual, partly due to war conditions and the removal of several boats from the lakes, and also to the careful navigating by the masters of boats on account of the extraordinarily low water level. Not since 1895 has the water been as low as during this season, and, while it has remained at practically the one level since the opening of navigation in 1915, it would seem as though there was little possibility of it receding to any great extent. This may be noted as a very good indication that the water has reached its low level, and there is a possibility that in the spring of 1916 vesselmen will note somewhat of a rise in it. Repairs in our dry dock during June and July were as follows: Steamboat Hinckley, owned by Hinckley-Cornwall Forwarding Co., Alexandria Bay, N.Y. Steamboat T. J. Waffle, owned by Capt. A. Foster and W. J. Waffle, Smiths Falls, Ont., repairs to stem, damage caused by running into lock sill. Docking of steamboat New Castanet, of Alexandria Bay, which ran on a shoal opposite Alexandria Bay, breaking her wheel and shaft; no serious damages, further than this. Steam barge Isabella H., owned by Hinckley-Cornwall Forwarding Co., Alexandria Bay, N.Y., slight repairs. Motor boat Kalolah, owned by Dr. Nichols, New York. Motor cruiser Aurora II., owned by Dr. J. J. Harty, Kingston. The latter two docked for cleaning and painting of hulls. Sailing scow Granger, owned by Capt. La Rush of Kingston, docked for installation of auxiliary 10 h.p. engine.

**Western Dry Dock and Shipbuilding Co., Ltd., Port Arthur, Ont.**—During the past month we have docked for extensive bottom repairs the s.s. Paliki of the Algoma Central Steamship Line, and the s.s. Glenfinnan of the Great Lakes Transportation Co. These were both fair sized jobs and have required approximately the last month to complete. The prospects for new work appear very poor at present, and the same holds good in regard to repair work, owing to the fact that so many of the lake boats have been removed to the Atlantic coast. The shipyard department is very quiet, but we are keeping our shops busy manufacturing shells for the government, and also are manufacturing light farm tractors."

**Yarrows, Limited, Victoria, B. C., July 6 to August 6:**—s. s. Princess Adelaide, docked, cleaned and painted; old propeller blade removed and a new spare one fitted; zincs renewed and engine room copper pipes repaired. s. s. Princess Sophia, docked, cleaned and painted; new propeller blade fitted; zincs renewed. s. s. Princess Victoria, made and supplied 4 new boat davits. Sir John Jackson Ltd. tug no. 10, docked, new cast iron propeller made and fitted; copper sheathing on keel renewed. Lobnitz Rock Breaker no. 1, docked, cleaned and painted; machinery overhauled and hull repaired. Dredge Mudlark, docked, cleaned and painted; machinery overhauled and hull repaired. Yacht Nooya, docked, cleaned and painted; new propeller shafting installed with reversible blades. s. s. Llandudno, docked on Government drydock, cleaned and painted; tail shaft drawn; stern tube rewooded; rudder pintles trued up and gudgeons rebushed. s. s. Leebro, docked, cleaned and painted and general deck and engine repairs. Barge Baroda, extensive repairs and alterations for converting her into coal carrying barge. s. s. Queen City, docked, cleaned and painted; boiler repairs. Sundry work and supplies for Naval Yard.

## Stranding of the s.s. Henry B. Hall.

An investigation into the causes of the stranding of the George Hall Coal Co.'s s.s. Henry B. Hall, near the Stone Pillars in the St. Lawrence River, June 10, was held at Montreal recently, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. F. Nash and J. C. Cain as nautical assessors.

The master, D. H. Kiah, stated that the vessel is registered in the United States, and had a crew of 17, including two certificated officers, with United States licenses. On leaving Quebec, a licensed tour de role pilot, Lucien Lachance, was engaged to pilot the vessel to St. Simeon and back to Quebec, and being instructed by his agents that the pilot was taking charge, he left the navigation of the vessel entirely in the pilot's hands, he and the other officers being practically strangers to these waters. On the night in question the weather was calm, but slightly smoky, though objects could be seen plainly for four miles. Carrying the impression that the pilot had full charge, he felt relieved of all responsibility, and remained in his room. The pilot did not make enquiries as to the error of the compass, nor as to the peculiarities of the vessel. The compass was practically correct, but the one on the bridge was not used, and therefore he did not know of any error existing. When he felt the vessel bump he went to the bridge and found it was the last of the ebb tide, and that an order for full speed astern had been given and countermanded. With the rise of the tide the vessel was floated off in about half an hour. No observations were taken to ascertain the exact position of the grounding, but soundings were taken.

In response to the court, the master said that he was told the pilot was in charge, and naturally felt that he was not interested in the navigation of the vessel in waters to which he was a stranger. He had been sailing as master on the Great Lakes for about ten years.

The second officer, J. E. Norman, stated that the pilot was sober and awake, or apparently so. It being practically clear weather, he steered by the lights without regard to courses.

The following judgment was delivered:

The court, having carefully considered the evidence adduced, cannot help stating that it is absolutely disgusted with the

manner in which this vessel was piloted and navigated. This is not the first case which the court has been called upon to adjudge, where the evidence has shown a most disgraceful disregard of responsibilities. A light is seen, and it is at once accepted as being the one sought for, and courses are either altered or maintained, as the case may be, without first assuring themselves of the position and exact nature of the light. There is not even a half system adopted of steering courses and taking bearings, but the ship is steered in any manner, very erratically, until it fetches bottom and meets with disaster, and it is realized that a mistake has been made. It has been the policy of this court, in the past, to temper justice with mercy, and allow some margin in a generous degree to faults and errors of judgment which human nature is heir to, and also to the numerous responsibilities which a ship master and a pilot have to shoulder; but in the face of such glaring, culpable misconception of the duties incumbent on the pilot, especially knowing that he, owing to the absence of the master and officer of the ship from the deck, was bearing the full responsibility of the navigation of this vessel. Hence, we emphatically declare that in this case there has been no error of judgment, nor is there anything in the evidence, which has been carefully reviewed, that indicates the least idea of adopting safe measures was ever entertained by the pilot. The reputation of the St. Lawrence has, for many years been attacked, due to the laxity of some of the pilots in giving ordinary attention to their duties. The River and Gulf of St. Lawrence are beautifully lighted, and when the weather is clear, or nearly clear, there is no reason whatever for such casualties occurring. As already stated, this court has always been inclined to leniency, but owing to the frequency of such inexcusable conduct, it wishes that it be recorded far and wide that the utmost severity will be exercised henceforth, and we trust by this announcement that those who are invested with responsibilities and accept same will exercise the caution and precaution which it demands. We have dealt leniently with a former case of a similar nature, and though in this instance the ship suffered no apparent injury and little delay, we declare that the evidence shows that Lucien Lachance was neglectful in exercising the functions of a pilot, and his

contempt of this court's orders to be present indicates a lack of mentality. Moreover, having at heart the good name and fame of the St. Lawrence, and with a view to preventing reflection being cast on the reputation of the qualified members of the Corporation of Pilots, in fairness to them, and for the other reasons as stated above, we suspend the license of Lucien Lachance for one year from this date. We reiterate that in all future cases of a similar nature no mercy will be shown, and a cancellation of the license will be the result and decision.

With respect to the master and second officer, they being U. S. citizens, this court cannot deal with them, but for their benefit, as well as others, we will state that we are simply astounded at the lack of interest shown as to their responsibilities. Knowing that their vessel was chartered for the season to ply in the same waters, one would naturally suppose that they would familiarize themselves somewhat with the names of the lights, courses, etc. If, as *Chiah* stated, he was informed that the pilot would take charge, some excuse can be formed for him, and a degree of blame attached to the officer who made such statement and led the master into a false sense of security. We will abstain from reprimanding the master or officer, or censuring their conduct, in view of the circumstances, but we maintain that it is their own duty, for their information and security, to check the various courses which the pilot gives, by bearings and reference to the chart.

### Atlantic and Pacific Ocean Marine.

The Canada Steamship Lines s.s. *Parima*, operating on the New York-West Indies service, was damaged by fire at New York, July 29.

The White Star-Dominion Line steamships *Megantic* and *Northland*, which have been operating on the St. Lawrence route, have been taken over by the British Admiralty.

The s.s. *Jacona*, which was torpedoed by the Germans recently, was formerly the *Bellona*, and was owned by the Thomson Line and operated in the Canadian trade.

The Norwegian steamship *Fimreite*, under charter to the Nova Scotia Steel and Coal Co., was torpedoed recently, when one day out from Swansea, Wales, for Wabana, Newfoundland, with ore.

Pickford and Black are reported to have secured the steamships *Atlantis* and *Jose* for their service with Cuba and Jamaica, the former being due at St. John early in September, and the latter towards the end of the month.

The British s.s. *Romney*, which was damaged through stranding on Green Island reef in the St. Lawrence River, June 24, left the Davie Shipbuilding and Repairing Co.'s dock at Levis, Aug. 1, and proceeded to Montreal.

The s.s. *Easington*, owned by Furness, Withy & Co., and engaged in the Canadian trade, is reported sold to British buyers for about £24,000. She was built at Newcastle, England, in 1907, and is 1,387 tons gross, 863 register, with deadweight capacity of 2,100 tons.

The recently built s.s. *Aitearoa*, owned by the Union Steamship Co. of New Zealand, which was launched at Glasgow, Scotland, June 20, for service between Australia, New Zealand and Canada, has been taken over by the British Admiralty, and is announced to have been renamed *Avenger*.

Furness, Withy & Co. are reported to have purchased the s.s. *Lord Lonsdale* for £85,-

000, and to have renamed her *Annapolis*. She is 4,567 tons gross, 2,895 register, with 7,500 tons deadweight capacity, built on the Isherwood system at Glasgow, Scotland, in 1911. She has a speed of 11½ knots.

The Ulster Steamship Co. (Head Line) s.s. *Bengore Head* and the Dominion Coal Co.'s s.s. *Batiscan* collided Aug. 1, near Hare Island, about 81 miles below Quebec. The *Batiscan*, although damaged about the bow, proceeded on her trip to Montreal, while the *Bengore Head*, as she was making considerable water in no. 2 hold, was beached.

The s.s. *Huntress*, which is being operated under special charter from the British Government, by the Peninsular and Oriental Navigation Co., and which was at Montreal early in August, was formerly a German vessel, owned by the Hamburg American Line, and named *Frisian*. She is of 10,000 gross tons, and was on her maiden trip when captured by Great Britain.

The Mayor and corporation of the city of Quebec, together with representatives of the transportation and business interests, welcomed the captain of the American-Hawaii Steamship Co.'s s.s. *Missourian*, and presented the vessel with a silver cup, Aug. 3, on the first visit of the vessel to the port. The *Missourian*, which is now engaged in transporting horses to France for war service, was the first cargo vessel to pass through the Panama Canal.

In connection with the recent reports that the Pacific Mail Steamship Co., operating in the trans-Pacific trade out of San Francisco, is to abandon its business on the coming into force of the Seamen's Act in November, P. Manson, General Manager of the Atlantic Coast line, who recently returned from a trip to the Orient, is reported to have stated that the company will not go out of business, and that there is no chance that the company will sell out.

The Pacific Mail Steamship Co. is reported to have sold five of its vessels, viz.,—China, Korea, Manchuria, Mongolia and Siberia, to the Atlantic Transport Co. of West Virginia, a subsidiary of the International Mercantile Marine Co. It has been reported, denied and reiterated that the company will go out of business on the coming into force in November, of the Seaman's Act, which, it is claimed, will militate against the paying operation of U. S. owned steamships in cross ocean traffic.

The Marine Transportation Service Corporation has been incorporated in New York with \$1,000,000 capital, to operate steamships from New York to California and Puget Sound ports, via the Panama Canal, and also to South American ports. It was announced that the Pacific Coast Line would be inaugurated during August with the sailing of the s.s. *Eureka* from New York, and that six vessels would be utilized in the service. The General Manager of the company is G. J. Hammell, New York.

The Osaka Shosen Kaisha s.s. *Hawaii Maru* was expected to arrive at Victoria, B.C., Aug. 31, on her maiden trip from Japan, direct from Yokohama. It was originally announced that she would call at Hong Kong, China, but owing to delays with the builders, the call was dropped from the schedule for the initial trip. At her trials, over a measured course, she developed 16.8 knots, and was expected to complete the run from Yokohama in 13 days. The s.s. *Manila Maru* will not be ready for service until September, and is expected to arrive at Victoria about Nov. 9.

A final disposition of the s.s. *Dacia* was made in the French courts Aug. 4,

when it was declared that the vessel was a legal prize, and the seizure perfectly valid. It will be remembered that the s.s. *Dacia* was acquired from the Hamburg-America line by a United States citizen of German descent, with the object of shipping freight to Germany. This so-called sale was declared by Great Britain not to be in accordance with the international rules, which do not recognize the transfer of vessels belonging to belligerents during war. Great Britain also announced that the *Dacia* would be considered as open to capture as a German vessel if she came into the open sea. Her dispatch from the United States port was considerably delayed while the matter was being debated, but the British attitude remained unaltered. The vessel eventually sailed with a cargo of cotton, and was captured by a French vessel and dealt with by the prize court there.

### Maritime Provinces and Newfoundland.

The name of the steamboat *Isaac N. Veasey*, no. 116,742, registered at Halifax, N.S., as owned by C. A. Larder, New Ross, N.S., has been changed to *La Have*.

An order in council has been issued amending the Halifax, N.S., pilotage district bylaws to provide that the amount payable to a pilot on superannuation shall be increased from \$500 to \$600 a year.

The icebreaking steamship *Bruce*, which the Russian Government purchased from the Reid Newfoundland Co. recently for ice-breaking services in the port of Archangel, arrived there Aug. 23.

The steamboat *Premier*, which was wrecked about a year ago, when running from St. John, N.B., to Nelson, N.B., where she was to be operated as a ferry, has been purchased by T. McCoy, St. John, who is having her overhauled for operation on the St. John River for general purposes.

The Newfoundland sealing vessel *Nep-tune*, which was used in the Scott expedition to the far north about two years ago, has been sold to a moving picture company for an expedition to the Arctic regions. She was built at Dundee, Scotland, in 1872, and is 684 gross tons.

Canada Steamship Lines s.s. *Kenora*, which for the past few weeks has been engaged in the coasting trade, was reported to be fast ashore at Low Point, in the harbor entrance at Sydney, N.S., August 5. She was driven ashore during a heavy gale, and is reported to be considerably damaged.

We are officially advised that the Canada Atlantic and Plant Steamship Co. has discontinued a portion of its service calling at Hawkesbury, N.S., and Charlottetown, P.E.I., for the present, owing to small tourist travel, but will probably resume it in September, if autumn business warrants it. The service between Halifax, N.S., and Boston, Mass., continues as heretofore.

A proclamation has been issued declaring Dipper Harbor, N.B., to be a port to which part XII. of the Canada Shipping Act shall apply. The harbor includes all the waters of the Bay of Fundy inside a line of 20 fathoms at low water, and between lines due north and south through points one nautical mile due east and west respectively, of the lighthouse on Campbell Island, in the entrance to Dipper Harbor.

Reference was made in Canadian Railway and Marine World for August, to a contract having been made by the Prince Edward Island Government for the operation of the s.s. *Senlac* on a service between the Island and the main land, for the remainder of the year. It should have

stated that the contract was made by the Department of Trade and Commerce of the Dominion Government, and not by the Prince Edward Island Government.

The Myrtle Leaf Navigation Co., Ltd., has been incorporated under the Dominion Companies Act, with \$64,000 capital and office at Apple River, N.S., to take over the schooner named Myrtle Leaf, to own and operate steam and other vessels, and to carry on a general navigation business. The incorporators are M. G. and E. A. White, Sussex, N.B.; G. W. Smith and E. Wasson, Apple River, N.S.; E. K. Merriam, Port Greville, N.S.

F. P. Gutelius, General Manager, Canadian Government Railways, when in St. John, N. B., early in August, is reported to have stated that a number of improvements will be undertaken in the harbor, as soon as the financial situation improves. These improvements will include the construction of two new piers, each 750 ft. long, and the replacing of the grain elevator which was destroyed by fire some time ago. The elevator will not be built on the old site, as it has been decided to use that for other purposes.

The steamboat Avonlea, operated on the ferry service across the Mira River at Mira Gut, N.S., was removed from the service at the end of July, owing, it is stated, to the objection that the engineer in charge was not a duly qualified man. The owners stated that the regular engineer had left on account of ill health, and a thoroughly competent man was in charge, but he had no certificate. No qualified engineer was available in the vicinity, and the income from the traffic, even together with the subsidy, was insufficient to cover the cost of engaging expensive outside assistance.

A New York shipping paper purports to give some information of certain changes in shipping routes regarding Canadian vessels, which, to say the least of it, is very misleading. It states: "The gradual withdrawal of trans-Atlantic steamers from St. John's because of the transport needs of the British Admiralty and the requirements of British trade has reached a point where only three small steamers are now plying between St. John's and Liverpool." It is evident that when mentioning St. John's, it is St. John, N.B., that is meant; St. John's is in Newfoundland. It may be taken from this that the only steamship service which is being operated between Canada and Great Britain at present is that between St. John and Liverpool, consisting of three small vessels, with no passenger accommodation. For main trans-Atlantic services, St. John has been for many years used as a winter port only, the summer traffic coming up the St. Lawrence to Quebec and Montreal. It also states that the Allan Line service which has been carried on for nearly fifty years between St. John, Halifax, Philadelphia and Glasgow, has been discontinued, and the vessels so engaged transferred to the service between Montreal and British ports. No doubt, when the St. Lawrence navigation season closes, these vessels will use the winter ports as heretofore.

### Province of Quebec Marine.

The s.s. Prefontaine, owned by J. Malo, Montreal, was driven ashore at Port Platon, near Quebec, August 4.

The depth in the Montreal harbor at Aug. 12, was 29 ft. 7 ins., a decrease of 3 ft. since April and of 2 ft. since May. The depth of water at Aug. 12, 1914 was 30 ft.

The Montreal Harbor Commissioners have completed the forming of a new river chan-

nel in the neighborhood in St. Helen's Island, with the object of lessening the current outside the harbor proper.

The Dominion Government s. s. Montcalm returned to Quebec, Aug. 10, after a month of touring the various lighthouse stations in the Gulf of St. Lawrence with provisions, etc.

The Imperial Oil Co. is arranging with the Quebec Harbor Commissioners for the construction of oil storage tanks on a portion of the Commissioners' property, with the view of facilitating the supply of oil to ocean vessels.

A sub contract has been given for the construction of the power house in connection with the Dominion Government dry dock at Lauzon, Que. The power house will be 120 by 100 ft., of brick and steel. The general contractors are M.P. and J. T. Davis.

The Montreal Harbor Commissioners' tug Sir Hugh Allan collided with the Dominion Government steamboat Levis in the St. Lawrence River, Aug. 21, sinking her in a few minutes. The Levis was on her way to Three Rivers, with a number of laborers from Government dredges. All were safely landed, as the accident occurred in shallow water. The Minister of Public Works was on board the Sir Hugh Allan.

The sale is reported of the s.s. Sindbad, owned by F. E. Hall and Co., Montreal, for about £6,850. She was built at Newcastle, England, in 1883, and is an iron vessel with double bottom for watertight ballast, and three watertight bulkheads. She is equipped with fore and aft compound engines with cylinders 27 x 54 x 33 ins., supplied with steam by one Scotch boiler at 75 lbs. pressure. Her dimensions are, length 216 ft. 2 ins., breadth 31 ft. 2 ins., depth 16 ft. 2 ins.; tonnage, 897 gross, 539 register.

The return of vessel passages, etc., through the Lachine Canal for July show that there were 1,143 vessel passages, 429 less than in July, 1914. The tonnage operated was 593,509, against 842,087; passengers carried, 12,162, against 34,818; cargo tonnage 452,033, against 715,628. A number of lake vessels usually engaged in traffic through the Lachine Canal, are at present being operated in the coasting and ocean trades, but some of them are expected to return to the lake service in time for the removal of the grain crop.

An order-in-council has been issued amending the regulations for the working and management of the dry dock at Levis, fixing the following charges: For all vessels up to 1,000 tons, \$300 for the first day of docking and \$50 a day for each subsequent day; for all vessels between 1,000 tons and 2,000 tons, \$350 and 4½¢ per ton per day; for all vessels above 2,000 tons, \$400 and 4½¢ per ton per day up to 2,000, and 2¢ per ton per day on all tonnage over 2,000. When a vessel is docked solely for painting and scraping or repair to propeller, the tariff is suspended, and a straight rate of \$50 is charged for pumping out the dock, and 5¢ per ton per day, not exceeding four days, and small repairs to the vessel's bottom, not exceeding \$50, will be allowed under this charge. When two or more vessels of the same owner are docked together for painting or repairs to propeller, only \$50 is to be charged for pumping out, but each vessel will be charged \$50 a day should the tonnage of each at 5¢ a ton per day not amount to that sum. Should a vessel for such minor work remain in dock beyond four days, then the full rates will be charged, including the charges for the first day. Cargoes will be charged the same as tonnage, but no charge will be made for ballast, and coal will be classed

as cargo. In no case will the charge be less than \$50 a day for lying in dock during the season of navigation, and no charge will be made for Sundays, unless work be done on the vessel.

### Ontario and the Great Lakes.

The Northern Navigation Co.'s s. s. Noronic, which grounded on a sandbank in the Detroit River, July 31, was released Aug. 3, without damage.

A press report states that the British Government is about to place an order at Port Arthur, for the building of two steel coaling vessels.

The U. S. ferry steamboat Clarence Fix, operating on the ferry service between Buffalo, N. Y., and Erie Beach, Ont., while under the charge of the Canadian customs officers recently for an infraction of the customs regulations, was removed by means of a trick at the end of July, and taken back to Buffalo.

Canada Steamship Lines s. s. Calgarian in arriving at Port Weller, Aug. 6, with a cargo of piling to be used in construction of harbor works there, is the first vessel to enter the port, which is under construction by the Dominion Government at the outlet of the Welland Ship Canal into Lake Ontario.

In addition to the vessels equipped with wireless telegraphy by the Marconi Wireless Telegraph Co. of Canada, as mentioned in our last issue, the steam tug Harrison, owned by J. Harrison and Sons, Owen Sound, and the steam tug Fischer, owned by the Reid Wrecking Co., Sarnia, have been equipped.

The Marine Department has given notice that the new gas lighted beacon at the outer end of the west pier at Cobourg will be placed in operation Sept. 1. It is an occulting white light, placed 20 ft. back from the outer end of the pier, and elevated 40 ft. It will be visible for 11 miles from all points of approach.

Toronto, Hamilton and Buffalo Ry. representatives waited on the Minister of Public Works at Ottawa, Aug. 12, to urge the development of Port Maitland as a lake port. The company proposes to operate car ferries and ore vessels between Port Maitland and Erie, Pa. An expenditure of \$20,000 on the port for the current year was asked.

The Port Severn locks at the Georgian Bay end of the Trent Valley canal, were opened for traffic July 26. The Trent Valley canal has been in progress for many years, and as stated at the opening, it is expected that it will be completed in a year or two. The canal will be 222 miles long, the highest point being Lake Simcoe. From Georgian Bay, the rise is 318 ft., and from Lake Ontario 470 ft.

The United States s. s. W. H. Wolf has been libelled at Detroit, Mich., by the Cleveland Grain Co., on a claim for damages of \$34,274 for a cargo of oats from Fort William, which it is alleged was damaged through the vessel springing a leak after striking the bank in the Livingstone Channel in Nov. 1913. It is stated that the steering gear was faulty and obsolete, and was the cause of the accident.

The Northern Navigation Co.'s steamships are now calling at Detroit and Windsor for passengers for the head of the lakes. It has not been decided whether this will be permanent or not. An announcement made by the President of the Windsor Board of Trade, states that the change will be of considerable benefit to that city, as well as to the company. It is not intended, as inti-

mated, in the daily press, to remove the headquarters of the company from Sarnia.

The steamships Owego, George F. Brown and Blenheim formerly owned by the Erie Railroad Lake Line, a subsidiary of the Erie Rd., have been sold to New York parties for coasting and ocean service, as a result of the Interstate Commerce Commission's decision that the company, as operating a railway must sever its connection with any steamboat lines. These vessels are cut in two to allow of their passing through the Welland Canal, and are again joined at Montreal.

The Georgian Bay Coal Co., Ltd., has been incorporated under the Dominion Companies Act, with \$100,000 capital and office at Toronto, to acquire coal and other lands, to carry on a general mining business, and in connection therewith to own and operate steam and other vessels, docks, wharves and other transportation facilities. The incorporators are, R. C. Vaughan, L. W. Mitchell, F. J. Buller, G. N. Limpricht and F. C. Allen, all of whom are officials of, or are associated with, the Canadian Northern Ry.

The U. S. Lake Survey reports the levels of the Great Lakes in feet above tidewater for July as follows,—Superior 602.29; Michigan and Huron 579.92; Erie 572.08; Ontario 245.13. Compared with the average July levels of the past ten years, Superior was 0.19 ft. below; Michigan and Huron 1.12 ft. below; Erie 0.75 ft. below, and Ontario 1.83 ft. below. It was anticipated that during August, Superior would rise 0.2 ft.; Michigan and Huron would remain stationary, and that Erie would fall 0.2 ft., and Ontario 0.3 ft.

The s. s. Alexandria, owned by Canada Steamship Lines, Ltd., while en route from Montreal to Toronto with general cargo, was driven ashore at Scarboro, near Toronto, Aug. 3, during a storm, and became a total wreck. The crew were saved with considerable difficulty. The Alexandria was built at Montreal in 1883, of oak, and was of the following dimensions,—length 173 ft. 7 ins., breadth 30½ ft., depth 8 ft. 4 ins.; tonnage, 863 gross, 508 register. She was formerly owned by the Ontario and Quebec Navigation Co., Picton, Ont., one of the companies absorbed by Canada Steamship Lines, Ltd., and until recently had been operated as a passenger vessel.

The U. S. Lake Survey, in relation to traffic in the St. Marys River above the locks, announces that a signal has been provided on the northwest pier above the third lock, consisting of a cylinder 4½ ft. diam. by 5½ ft. high, with west front painted yellow and showing a yellow light at night. When traffic in the canal leading to the third lock is congested, this signal will be hoisted about 35 ft. above water. When so hoisted it will indicate that down bound vessels loaded for the third lock should anchor north of the ranges until the signal is lowered. The absence of the signal will indicate that pier space is available in the canal. Vessels loaded to pass the Poe lock will not be governed by this signal.

### Manitoba, Saskatchewan and Alberta.

The ferry service which has been operated for several years across the Assiniboine River, between Charleswood and Assiniboia, will be discontinued as soon as the bridge, now nearing completion across the river, is ready for traffic.

The Hudson's Bay Co.'s s. s. Fort McMurray is reported to have been sunk at the Bouillion Rapids in the Peace River, by striking a rolling boulder which crushed in the bottom. It is stated that repairs would

be completed and the vessel running again by the end of August.

The material for the construction of the Peace River Tramway and Navigation Co.'s steamboat is rapidly being assembled at Peace River Crossing, and as soon as the balance, which is on the way from Vancouver, arrives, construction will be commenced and continued until the vessel is completed. This is hoped to be accomplished by the reopening of navigation in May 1916. It will be 165 ft. long, 35 ft. beam, with accommodation for 110 cabin passengers and 300 tons of freight. The engine cylinders will be 20 by 84 ins., developing about 800 n.h.p. D. A. Thomas, who is at present in Canada representing the British Government on the munitions of war matters, is chiefly interested in this company, the head office of which is at Vancouver, B. C.

### British Columbia and Pacific Coast.

Vancouver harbor, as defined by the Vancouver Harbor Commissioners Act, covers 98.4 miles of water front, and an area of 49.08 square miles.

The Grand Trunk Pacific Ry. has deposited with the Minister of Public Works at Ottawa, a description of the site with plans of a wharf and warehouse to be built at Burrard Inlet, Vancouver.

The s. s. Grahamland, which was at Victoria, B. C., recently for lumber for Great Britain, was formerly the German collier Josephena, and was captured from the Germans during the sea fight at the Falkland Islands, during the earlier stages of the war.

The s. s. Leelanaw, owned in New York, which was recently sunk by the Germans in the North Sea, was formerly owned by the Dunsmuir interests at Victoria, B. C., and has had a very varied career since leaving her builders' hands at Newcastle, England, in 1886.

The Pacific Cable Board's cable ship Strathcona has been wrecked on an unknown reef, near Suva in the southern Pacific, while bound from Auckland, New Zealand to Fanning Island with supplies. The crew were rescued by the cable ship Iris.

The Victoria Board of Trade is taking up the matter of increased dry dock facilities there, on instructions from the council, on account of several vessels having to be taken to U. S. ports for repairs owing to lack of adequate accommodation for vessels of large size at Victoria.

McFee Henry and McDonald, Ltd., has been incorporated under the British Columbia Companies Act, with \$50,000 capital and office at Vancouver, to carry on a general dredging business, and in connection therewith to own and operate all kinds of vessels and vessel operating facilities.

The Dominion Public Works Department is dredging a channel 300 ft. wide and 10 ft. deep at low water, on the north side, and 400 ft. from the jetty recently built along the north shore of Iona Island over Sturgeon bank, to facilitate the construction of a dredged channel into the North Arm of the Fraser River.

The Norwegian s. s. Thor, operating between Nanaimo, B. C., and San Francisco, California, with coal, under charter to the Western Fuel Co., San Francisco, ran ashore in Umatilla reef, 672 miles north of San Francisco, at the end of July. She was subsequently taken to Victoria for examination and repairs.

Considerable progress has been made on the construction of the Government dock at

the foot of Salisbury St., Vancouver. The last of the cribs for the foundation has been placed, and rather more than half of the surmounting wall has been finished. The balance of this, and the filling in of the interior, will, it is expected, be completed by November. The sheds which are to be erected will run the full length of both sides of the dock, which is about 800 ft. long. On the filled in portion, will be placed seven railway tracks, three of which are to be utilized for the grain elevator. The work on the foundation of the elevator is well in hand, and it is stated that the whole will be complete in readiness for handling this year's crop. Two grain galleries will run the full length of the dock.

### Mainly About Marine People.

Capt. Jos. Rinfret has been appointed to the command of the Canada Steamship Lines s. s. Quebec, vice Capt. L. R. Demers resigned.

W. Carruthers, who died at Toronto, at the end of July, was the second son of James Carruthers, President, Canada Steamship Lines Ltd.

Capt. F. G. Cook, who was well known as a master mariner in the earlier days of shipping in the Maritime Provinces, died at Central Chebogue, N. S., Aug. 16, aged 98.

Ethelbert Furness has been elected a director of Furness Withy and Co., Ltd., to fill the vacancy caused by the death of Sir Stephen Furness.

Capt. H. W. Lloyd, master of Furness Withy and Co.'s s. s. Eagle Point, died at Gaspé, Que., at the end of July, where the vessel was taking on a lumber cargo. The funeral took place at Montreal.

R. G. Allan, who died at Liverpool, England, recently, was grandson of Capt. Alex. Allan, the founder of the Allan Line. He was, from 1884 to 1904, a member of the Mersey Dock and Harbor Board, but had not been connected with the Allan Line for several years.

John Fleetwood, who retired from the position of Passenger Manager at Liverpool, England, for the American Line and the White Star-Dominion Line, at the end of 1914, died there recently aged 64. While with the company he was in charge of the Canadian services.

Commander E. Outram, R.N.R., who was in command of the Allan Line s.s. Alsatian prior to the war, and who has been continued in the command since the vessel has been utilized as an auxiliary cruiser by the British Admiralty, has been given the Distinguished Service Order for services with the patrol cruisers.

Capt. L. R. Demers, who has resigned from the command of the Canada Steamship Lines s. s. Quebec, was appointed a pilot in 1862. He took charge of the Dominion Government s. s. Druid on buoy service in 1869 and resigned in 1894 to return to the pilot service. Prior to taking command of the s. s. Quebec, he was master of the Quebec Steamship Co.'s s. s. Campano for 12 years.

The funeral of Miss Gwen Allan, one of the two daughters of Sir Montagu Allan, who lost her life as the result of the torpedoing of the s. s. Lusitania by the Germans, took place at Montreal, July 27. The body of the other daughter has not been recovered. Sir Montagu Allan was not present, as he was unable to leave England, where he is with Lady Allan, who was also a passenger on the vessel, and has not yet sufficiently recovered from injuries she received.

Telegraph, Telephone and Cable Matters.

R. N. Young, Superintendent of Telegraphs, British Columbia Division, C.P.R., recently made a complete inspection of the company's lines on Vancouver Island.

The Association of Railway Telegraph Superintendents will hold its next annual convention at St. Paul, Minn., June 20 to 22, 1916. The officers for the current year are: President, E. C. Keenan; First Vice President, L. S. Wells; Second Vice President, M. H. Clapp; Secretary and Treasurer, P. W. Drew.

The C.P.R. has announced reductions in cable rates from the west to Great Britain and Ireland. The rates for night letters are 13 words, \$1.60, and 5c a word, to London and Liverpool; to other parts, \$1.73 and 5c; week end letters, 25 words, \$2, and 4c a word, to London and Liverpool, and to other parts, \$2.25 and 5c a word.

G. C. Ward, Vice President and General Manager, Commercial Cable Co., was in Nova Scotia recently on his way home from the Panama-Pacific Exposition at San Francisco, Cal. He inspected the company's stations at Halifax and Canso, and proceeded to St. John's, Nfld., to inspect the construction work in progress there. The office at St. John's is being connected with the station at Cuckold Cove by an underground cable two miles long.

John Henderson, whose death at Portland, Ore., was announced Aug. 23, aged 75, was born at Montreal, and entered Montreal Telegraph Co.'s service at 12 years of age, eventually becoming an operator there. He subsequently went to the U. S., where he continued in telegraph service, and eventually returned to Canada, taking service in Victoria, B.C. On the laying of the Atlantic cable he returned to the U. S. and was manager of various telegraph offices, chiefly in Nevada, for the Western Union Telegraph Co.

Wireless telegraph communication was established between Japan and Hawaii, July 27. The Japanese station is erected at Funabashi, near Yokohama, and the Hawaiian station at Honolulu, the distance between these points being about 3,380 miles. The new stations will now allow of wireless communication being maintained between Japan and the United States, the Hawaiian Islands station and the United States station at Bolinas Bay, California, 2,100 miles, having been in communication since Sept. 24, 1914.

An order-in-council has been passed appointing Hon. C. J. Doherty, Minister of Justice, as Minister of Telegraphs and Telephones, in connection with the war, with power to direct that the property of any telegraph and telephone company may be taken over at any time during the war for His Majesty's service, or to place someone in control of the business to control the transmission of all messages, especially those intended for places outside of the Dominion.

Horace McDougall, who died at Petrolea, Ont., Aug. 18, aged 70, was for many years connected with the telegraph business. He superintended the construction of the first telegraph line into Fort Garry from St. Paul, Minn., in 1870, for the Western Union Telegraph Co., and was in charge of the company's Manitoba lines, and subsequently of the Great Northwestern Telegraph Co.'s lines, at Winnipeg, until his retirement in 1890. He was in charge of the telegraphic work during the second Riel rebellion. He returned to Ontario in 1891, since when he has lived successively at London, Toronto and Petrolea.

Recent reports stated that the British Government purposed taking over all the Marconi wireless telegraph stations situated in various parts of the Empire, for war purposes. While no official announcement to this effect has been made, it should be remembered that the terms under which practically all telegraph and cable business is conducted in British territory, vests the ultimate control of the traffic in the British Government. The telegraph business in Great Britain is entirely in the hands of the Government, and no private telegraph business can be conducted except under license under the Government's control. Wireless telegraphy has proved of undoubted value, both before, and during the war, and the agreements between the British Government and the Marconi companies may have given rise to the rumors. So far as Canada is concerned, the majority of the wireless telegraph stations are owned by the Dominion Government and operated on its behalf, by the Marconi Wireless Telegraph Co. of Canada, which itself owns a few stations in eastern Canada.

Among the Express Companies.

E. J. Wearing has been appointed General Assistant, Canadian Ex. Co., and Grand Trunk Ry., at Liverpool, Eng., vice the late Wm. Cuthbertson.

The Canadian Northern Ex. Co. has been ordered by the Board of Railway Commissioners to maintain express delivery and collection service hitherto furnished at Athens, Ont., pending a formal hearing of the matter by the Board.

The Board of Railway Commissioners has ordered express companies to amend their form for the taking of consignees' receipts for goods delivered, by omitting such words as "in good order" or "in apparent good order," so that the receipt required be similar to that given shipper, with liberty reserved to consignees, in case of apparent loss or damage, to qualify the receipt in accordance with facts.

What is stated to be the largest bullion shipment ever made across the ocean, arrived at Halifax, N.S., Aug. 11, from London, England, and was transferred by train to New York, in connection with war payments. The amount sent was \$52,000,000, of which \$35,000,000 was in gold. It was consigned to the American Ex. Co., and was transferred to New York in seven steel cars and accompanied by an armed guard, the train being preceded by a pilot locomotive, in view of the possibility of any damage to track or bridges.

**British Shipbuilding in War Time.**—A return of shipbuilding in the United Kingdom, issued by Lloyd's, shows that 434 merchant steamships of 1,505,025 gross tons, and eight sailing vessels of 1,900 tons, were under construction during the quarter ended June 30. This is about 81,000 tons less than during the previous quarter, and 215,000 tons less than during the corresponding quarter of 1914. During the June quarter of 1915, 74 merchant steamships of 147,964 gross tons were launched.

**Machine Guns for Newfoundland Contingents.**—Of the ten machine guns which Newfoundland is providing for its war contingents, W. D. Reid, President, Reid Newfoundland Co., has provided two; Sir Edgar Bowring, of Bowring Bros., steamship owners, two, and the Dominion Steel Co. and Nova Scotia Steel and Coal Co.'s employees at the Wabana mines have subscribed \$2,000, which is to be devoted to the fund. In addition to the foregoing the Reid Newfoundland Co. is giving an aeroplane.

# A Clear Track To Promotion

How to get off the side-track—how to break the couplings that hold them near the bottom of the pay roll—is the one big problem that troubles most railroaders.

There's a clear track to promotion—without grade or curve—open to the man that has the backbone and grit to take it. Before you can travel this track to promotion and bigger pay you must "coal up" with knowledge—you must be specially trained.

The Railway Instruction Department of the International Correspondence Schools is able and ready to give you the training you must have. You can get it right at home without losing an hour's time from your present job.

It will not cost anything to find out how the I.C.S. can train you for a better job. Put an "X" near the class of work you would like to follow, in the attached coupon, and mail it to the I.C.S. This won't obligate you in the least. It will simply bring full information by return mail.

June 28, 1916.—Association of American Railway Accounting Officers, Detroit, Mich.

## Book Reviews

The Manual of Statistics, Stock Exchange handbook for 1915. 1114 pages, 8 by 6½ ins., cloth. The Manual of Statistics Co., 56 Pine St., New York. \$5.

This is the 37th annual issue of this standard publication. The most recent important developments and changes in the position of railway and industrial corporations on the continent are noted. The information given is the latest available, and it is conveniently arranged under various headings. Under railways special attention is given this year to the G. T. R., and the G. T. P. R., maps of which systems are given. The last section of the volume gives elaborate information of the national debts, funded obligations, etc., of the several countries whose stocks and bonds are quoted on the stock exchanges of the continent, and numerous tables showing the prices of bonds, and statistical information as to the production of iron, coal, cotton and other raw produce on the continent. All the information is well arranged and handily indexed for reference. It is a valuable manual of reference for the investor and man of public affairs.

## Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

American Locomotive Co.—J. O. Hobby, Jr., has been appointed Treasurer.

Canadian Steel Foundries, Ltd.—F. E. Smith has been appointed Sales Manager. Office, Montreal.

Ottawa Car Manufacturing Co., Ltd.—W. M. Arnold, heretofore Assistant General Manager, is reported to have been appointed General Manager.

## FOR SALE

Complete shop outfit consisting of One 10x15 Iron Shaper. One Pedestal Emery Stand. One 20 in. Square base Champion Drill. One 14x28 Fay & Scott Extension Gap Lathe. One 8 h.p. Gasoline Engine. Together with belting, shafting, hangers and pulleys. This machinery in first class condition.

## Your Summer Holiday!

### This Year The Maritime Provinces

#### LA BAIE DE CHALEUR

An arm of the Gulf of St. Lawrence. The estuary of the Restigouche, is one of the most fascinating and superb panoramic views in America. Smooth, sandy beaches tempt the bathers. Many coves and harbors where boating is alluring and shorn of its risks.

#### CAPE BRETON

An island wherein are other isles innumerable. Bras d'Or Lakes, an inland sea dividing the island in twain, provides a spacious waterway through the interior. Nature has made Cape Breton an ideal land for a summer holiday.

#### ABEGWEIT

*Crashed on the Waves*

#### Prince Edward Island

Sweet pastoral scenery, fragrant groves, almost tropical foliage, health-giving breezes, atmosphere marvellously clear. Sky as blue as sunny Italy.

#### Summer Excur- sion Fares

gives in comprehensive form summer fares from important centres to the numerous resorts reached by Canadian Government Railways, circular tours, list of hotels and summer homes and their rates.

## BRAKE SHOE SCRAP REDUCED TO THE ABSOLUTE MINIMUM

The Steel Back Brake Shoes here pictured were all worn down practically to the steel back.

The average weight of 100 shoes taken at random from this pile was about 5½ lbs.

The roads using these shoes received about twice as much brake shoe service as could have been gotten from ordinary unreinforced shoes. It paid them and it will pay your road to use Steel Back Brake Shoes.

Manufactured in Canada.

## Which Method

prevails in your plant? Does it take two men to do one man's work.

Why don't you replace that old antiquated tool with a new up to date

### Reece's New Screw Plate

These pictures do not exaggerate conditions as you can actually see them, if you will visit Machine Shops throughout the country.

Lessen your cost by giving your mechanics a REECE'S NEW SCREW PLATE.

**BUTTERFIELD & CO., Inc.**  
ROCK ISLAND, QUE.

# SAFETY FIRST

The best way to educate your employes to the safety habit is by signs.

The "SAFETY FIRST" sign will be before them many times each day and warn them of the constant danger they are subject to in the course of their duties.

Enamelled iron signs, on account of the brilliancy of their colors, attract immediate attention. They never fade and are as good in ten years' time as the day they are put up.

We make to order in any colors, with any lettering or design.

We will be pleased to quote you prices and submit sketches on request.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared, and no reasonable expense considered too great that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing, and manufacturing concerns, and by responsible and worthy financial, fiduciary, and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

# "Jack Canuck"

The Winning Name

**Mr. Arthur Jones, Section Foreman, the Winner**

The G. T. R., Scarboro Junction, Ont.

Two other men sent in the same name, "Jack Canuck," and, while Mr. Jones was the first man to send in his answer to us, we feel that it is only fair to award

**MR. JAS. HOTSON, Bridgeman,**  
Brandon, Man.

**MR. JAS. LEGGET, Section Foreman,**  
Claremont, Ont.

each a 5 H.P. Jack Canuck, in token of our appreciation of their services in sending in a name which so happily describes our Engine.

The prizes awarded above are the result of our "Name it—and you can have it" contest to secure a name which would be popular among the trackmen of Canada. A better name or more popular than "Jack Canuck" could not have been chosen.

The contest committee consisted of Mr. J. M. R. Fairbairn, Asst. Chief Engineer of the C.P.R.; Mr. Acton Burrows, Managing Director, Canadian Railway and Marine World; and Mr. Graham Drinkwater, V.P., The Canadian Fairbanks-Morse Co., Limited.

For further information address our nearest branch.

# Flange Lubrication Should be Automatic

Flange lubrication to be efficient should be automatic, absolutely independent of your engineer, and at the same time the device itself should be so simple and yet so accurate that it will be practically trouble proof. The

## Detroit Automatic Flange Lubricator (Pendulum Type)

is absolutely automatic and at the same time simple. It is all in the pendulum. Any lateral movement of the locomotive causes the pendulum to swing. This oscillation rotates, rocker-like, the pendulum shaft, which produces alternating strokes of the two plungers in the pumping unit.

The use of the Detroit Automatic Flange Lubricator insures positive lubrication just when it is needed. May we send booklet F-O 81? It contains all the facts as well as drawings. Write to-day.

## Small, Direct-Current Generating Sets For Marine Work

Westinghouse Geared Turbine Sets mark a distinct advance in the building of small direct-current units.

The turbine operates at high, economical speed, and the generator at such low speed that commutation and mechanical troubles are unknown.

The unit is self-contained and very compact. No expensive foundations are required. The lubricating system is entirely automatic and needs but infrequent attention, as there are no oil or grease cups to be

filled. The amount of oil used is but a fractional part of that required by a reciprocating engine of the same size, and the exhaust is free from oil.

The units are so designed and built that long life and thorough reliability are assured.

When you are depending upon a locomotive crane for handling your coal you realize that it must be a **good** crane. You cannot have the crane continually breaking down, as it means a big loss in time.

## BROWNHOIST Locomotive Cranes

are being used to-day by railroad men because they realize that these cranes will do their work as it should be done. One road uses thirty of them. These cranes are built for hard, continuous service. And records prove that they will stand up under the severe working conditions. Ask the owners—they will tell you what Brownhoist cranes will do.

Write for our Catalog K, which shows how and where the Brownhoist Locomotive Crane is used.

REG. U. S. PAT. OFF.

## Fabrikoid Curtains Are Used On This Car

Railroads throughout the country are realizing the value in dollars and cents of

REG. U. S. PAT. OFF.

Not only for upholstering car seats, but also for car curtains. Besides cutting car seating maintenance costs, DU PONT FABRIKOID is low in first cost. It is sanitary, comfortable, attractive, weather and water-proof, and non-peeling. Fabrikoid will not split, crack or flake off. It is tough yet pliable and easily applied. Made in many weights, widths and designs, Moorish, Hand Spanish and solid colors. Write for samples and convince yourself.

# Meeting One Financial Obstacle to Adequate Signal Protection

There is little doubt that there would be a tremendously greater amount of mileage protected by automatic block if first cost were the only difficulty to be encountered. The great difficulty, however, in the universal use of fixed automatic block signals is found in the continuous cost of maintenance.

The advantage in this respect of

## Simmen Automatic Block Cab Signals

is shown by the fact that none of the four roads which are operating the Simmen System have found it necessary to provide any special organization or additional labor for inspection purposes.

The reason for this is that the track and overhead installation of the Simmen System is so simple (involving no apparatus along the track except standard telephone overhead construction and simple signal rails) that the regular track and line maintenance labor is ample to care for these elements.

All operating electrical apparatus is either in the cab or in the dispatcher's office.

The cab apparatus is easily inspected when the car is in for regular inspection.

The apparatus in the dispatcher's office is readily inspected and cared for by the dispatcher, with the occasional assistance of a lineman.

This enormous comparative saving in maintenance costs is proved by the experience of the four roads on which the Simmen System is now, and has for some time been, standardized.

The importance of this fact in any signal installation is obvious.

# O-B TROLLEY CATCHER

## Approved by Railway Men

Here are a few of the many favorable comments we have received:

"Goods furnished on trial have proved satisfactory, especially the trolley catcher."

"Furnish just the same as those shipped on trial which were accepted."

"You may bill us for the same at your earliest convenience. We feel sure they are well worth the price."

We know the O-B Catcher is right and we want to show you. We will send you one for trial, to be returned at our expense if you are not pleased. Why not write to-day?

ADDRESS INQUIRIES TO HAMILTON

Works and Operating Offices  
Hamilton, Ontario

Consolidated Type Locomotive Built for Freight Service on the Grand Trunk Pacific Railway.

# LOCOMOTIVES

Long experience, new equipment, efficient management and expert workmen, are guarantees that our Locomotives will give record service. Over 1,200 Locomotives have been built at our Works since the erection of the plant. We are builders of Simple and Compound Locomotives adapted to every variety of service, for Railway Contractors, for Industrial Purposes, Mines, all classes of Railway Work, etc.

We are also builders of stationary boilers, suitable for contractors and industrial plants. Grey Iron castings—any size or shape—ordinary or intricate—made promptly. New foundry, splendidly equipped. We would be pleased to quote on castings—singly or by contract. We also make drop forgings of all descriptions.

**CANADIAN LOCOMOTIVE CO., Limited, Kingston, Ontario**

## The No. 25 McLain Pressed Steel Headlight

is equipped with triple nickel-plated polished reflector of special parabolic design which centralizes the rays of a concentrated filament Mazda bulb perfectly focused, throwing a straight, strong beam of light down the track, far ahead of the car.

Extremely light—weighing three pounds less than any other Headlight.

No sacrifice has been made to attain this lightness of weight for the McLAIN No. 25 is as strong as any Headlight made, and has an illuminating power in excess of other Headlights employing an incandescent globe.

Has extended dash—Dust and waterproof.

Guaranteed to give good service.

Write for booklet and prices.

# Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE — INTERCOLONIAL RAILWAY.

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders,  $23\frac{1}{2}$  x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

## Good Hunting

on Canadian Northern Railway  
Lines for Moose and Deer

North of Quebec, in Central Ontario and North of Parry Sound. Also along the south shore of Nova Scotia.

Further particulars are obtainable in our booklet, "Where to Fish and Hunt," or from the General Passenger Departments, 68 King Street East, Toronto, Ontario; 226 St. James Street, Montreal, Quebec; and 123 Hollis Street, Halifax, N.S.

Style No. 200.

## Garlock High Pressure Piston Rod Packing

Is built up in rectangular form and uniform shape and exact sizes are thereby obtained.

Asbestos packing, which is rolled around a rubber core and afterwards distorted by running through a square die, does not retain its shape or size.

The best materials we can buy are used in the manufacture of our high pressure packing.

The length of service obtained from it is greater than that secured from other makes, therefore the labor cost of applying and adjusting is less.

Our packings are sold at net weights; weights of tubes and boxes are not included.

Every pound of our high pressure packing carries with it the Garlock guarantee of satisfactory and economical service.

We will promptly replace or refund the cost of any of our packings which may prove unsatisfactory to our customers.

# The Sign of the Times

Enamelled iron signs are ideal for station name and station door signs.

They are much superior to a painted wooden sign, which has to be repainted at frequent intervals, and they last a lifetime.

There is absolutely no wear to them, and we guarantee that they will not fade or be affected by the weather in any way.

We will be pleased to quote you prices on request.

## Appearance Means Everything

The moment anything has a used appearance, it depreciates in value. An engine run two years might give better service than when it was new. It has stood the test. And anything used may be better for the use—but its market value lies in its appearance. This appearance may make a difference of 50% in the selling value.

Berry Brothers' Railway and  
Marine Varnishes

**CHANGE**

## 450 Railroad Shops in the United States and Canada Use Thermit

*Let us send you this pamphlet.*

This comprises practically all the shops of importance in North America, and it can be said without exaggeration that the list of railroads using Thermit includes practically every system from the small road having only three or four locomotives to the largest system in the world having many thousand locomotives.

If by any chance your shop is not using Thermit, you should investigate the process and see how effectively and economically it will handle the many repairs on locomotive frames and other sections.

Remember that the greatest railway systems in the world use hundreds of thousands of pounds of Thermit. They do not use it for any reason except that it "delivers the goods" and has proven itself a profitable investment.

Let us mail you our new pamphlet, No. 2144, which contains full information on Thermit in Railroad Shops.

All Thermit materials and appliances are manufactured in the United States and Canada

## Scientific Treatment of Boiler Waters Dearborn Service to Railroads

In these times when "Economy" is the slogan in every industry, and particularly in railroad operation, Dearborn Service should make a strong appeal to the Motive Power People.

In treating boiler waters by the Dearborn Method there is no outlay of capital required for installation of equipment, nor expense involved in putting the goods into use, while the cost of the treatment per thousand gallons of water is less than by any other method. We furnish expert testing engineers to advise as to the proper handling of the treatment to get the best results economically.

Scale formation, foaming, corrosion, and pitting are prevented, fuel and lubricating oil expense lessened, greater mileage between boiler washings made possible, as well as ability to haul greater tonnage, and the life of flues and fire boxes extended 50 to 200 per cent.

Most railways have bad water supplies to contend with. We would like an opportunity to show you the efficiency of Dearborn Service in overcoming such difficulties on your line.

## For Safety's Sake Specify -

## Northern Electric "R.S.A." Wire

☐ Buying wire for railway signalling purposes on a price basis is a crime.

☐ Climatic conditions, especially in Canada, seriously affect the wire connecting the signals. Extremes of heat and cold, gases, acids, and oils are some of the many elements that railway signal wire is subjected to and must combat.

☐ Northern Electric Railway Signal Wire stands the tests of time. It not only meets but exceeds the "R.S.A." Specifications. It is backed by the largest makers of wires and cables in the country, and sells on a quality instead of a price basis.

## The Parmelee Pipe Wrench "The Toothless Wonder"

### PRICE LIST C

Handle	Set No.	Pipe Handled	Set Complete	Extra Handle	Extra Girths
10 in.	1	$\frac{3}{8}$ , $\frac{1}{2}$ , $\frac{3}{4}$ , 1 in.	\$5.00	\$2.25	$\frac{3}{8}$ , $\frac{1}{2}$ , $\frac{3}{4}$ , 1 in. \$ .75
20 in.	2 $\frac{1}{2}$	$\frac{3}{4}$ , 1, 1 $\frac{1}{4}$ , 1 $\frac{1}{2}$ , 2 in.	7.50	2.50	$\frac{3}{4}$ , 1, 1 $\frac{1}{4}$ in. 1.00
25 in.	3 $\frac{1}{2}$	1 $\frac{1}{2}$ , 2, 2 $\frac{1}{2}$ , 3 in.	7.50	3.00	1 $\frac{1}{2}$ , 2 in. 1.25
					1 $\frac{1}{2}$ , 2, 2 $\frac{1}{2}$ , 3 in. 1.25

Prices on larger sizes furnished upon application.

DESIGNED ESPECIALLY to handle pipes spaced closely as in coil work. No. 2 $\frac{1}{2}$  wrench illustrated requires but three-quarter inch space between pipes.

POSITIVE GRIP instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

RATCHET-LIKE ACTION. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

CAN'T CHEW. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

CAN'T CRUSH. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

# Fire Tube Marine Superheater--Eight Reasons Why

1. It is adaptable to either new or existing boilers of the fire tube type, and can be applied with no change in design or construction.
2. It renders possible an increase in output of boiler horse power from a given boiler plant 10% to 20%.
3. It will produce the same boiler output with fewer boilers.
4. It reduces the size of the bunkers, thereby reducing the draft of the vessel with a given cargo, or making possible an increase in revenue cargo.

5. It results in a saving of fuel over saturated plants, both operating under the same draft conditions, of 10% to 20%.
6. It reduces the maintenance costs by the prevention of water hammer, leaky flanges, and condensation in the cylinders.
7. It does not prevent rapid, thorough, and frequent cleaning of the tubes.
8. Its construction provides easy access to all screwed joints and the easy removal of the parts.

# RE - ORDERS

In any business, the best test of success is re-orders.

With few exceptions, the house that has to get its trade each year from entirely new customers is under suspicion. If the dealings were fair, and the price right, and if the goods stood up and proved their quality, the same customers ought to come back and order again and again.

Some of our customers have been buying our rubber goods week in and week out, for over fifty years.

Our line-up is complete, our quality is unexcelled, and our prices are right. Let us show you what we can do.

*It is our desire to serve you.*

## Freight Cars for European Continental Service Being Built in Canada.

The British Government is having built by the National Steel Car Co. at Hamilton, Ont., for service in France and Belgium, 1,300 steel frame covered cars of the M. M. No. 1 type, which are largely used in some parts of the European continent. One hundred of them are being provided with accommodation at one end for a brakeman on guard. The principal dimensions of the 1,200 cars are as follows:—

Length over end sills	25 ft.	3 5-32 ins.
Wheel base	8 ft.	7 15-16 ins.
Length over buffers, free	28 ft.	5 1/8 ins.
Length over buffers, compressed	27 ft.	11 7-16 ins.
Length over pulling force of draw hooks	26 ft.	5 1/8 ins.
Wheel base	11 ft.	7 25-32 ins.
Height from rail to centre of buffers and draft gear	3 ft.	5 3-16 ins.
Height from rail to top of floor	4 ft.	0 1-32 ins.
Height from rail to top of roof caps	12 ft.	0 29-32 ins.
Total length over roof	25 ft.	5 1/8 ins.
Total width over roof	9 ft.	2 13-32 ins.
Clear length between end protection boards	24 ft.	11 7-32 ins.
Clear width, between base boards	8 ft.	4 ins.
Clear height under leg of inside plate tee	7 ft.	1 19-32 ins.
Clear height of door opening	6 ft.	1 1/8 ins.
Clear width of door opening	4 ft.	1 1-16 ins.
Cubic capacity		1482 cu. ft.

The cars are mounted on 4 rolled steel wheel 40 15-16 ins. dia. on tread line and forged steel axles with 5 1/2 x 11 11-32 in. journals placed at 6 ft. 7 23-32 ins. centres. The journal boxes are of cast steel and are equipped with cast steel covers bolted on malleable iron oil reservoirs, arranged to be filled from outside and provided with oil pad, spring and wick, also bronze bearing, cast steel wedge and wood dust guard. The pedestals are of cast steel with forged tie bars. The bearing springs are of semi-elliptic type and rest on top of the journal box, being connected to the car by means of forged links attached to spring ends and cast steel brackets secured to car sills. The brake gear is operated by hand only, by means of two long levers, one at each diagonally opposite end of car, two wheels only being braked through cast steel brake heads, provided with oak blocks, each being operated independently of the other. The buffers are of the plunger type with volute springs, each having a total compression of 2 27-32 ins. The draw gear is composed of a forged steel draw hook with shank secured to a cast steel compression washer by means of a chrome nickel steel key. Between the compression washer and a steel bearing casting secured to end sill is a volute compression spring, connection with another car made by a screw coupling and shackle.

**CONSTRUCTION OF CAR UNDER-FRAME**—Pedestal sills:—Two 10 in. 30 lb. I-beams continuous between inside of end sill webs into which they are coped and connected to end sills by means of a 17 x 3/4 in. end sill top cover, an 8 1/2 x 3/8 in. end sill bottom cover and a cast steel angle connection of substantial design. End sills:—Two 10 in. 27.2 lb. ship channels continuous between inside of flange of corner post angle. Crossties:—Near ends of car, two 10 in. 21.8 lb. ship channels, continuous between inside of webs of pedestal sills into which they are coped, connections being made by 5-16 in. top and bottom gussets and 4 x 4 x 3/8 in. angle connections. Crossties:—Near centre and intermediate, three 6 in. 12.5 lb. ship channels, continuous between and coped into pedestal sills and connected to them by 5-16 in. gussets, bottom, and 4 x 4 x 3/8 in. angle connections, the middle part of the upper

flange is provided with a 7 x 3/8 in. cover plate 3 ft. 1 1/4 in. long. Centre sills:—At end, two 10 in. 25 lb. I-beams at each end, coped into end sill and end cross tie respectively, connected to end sill top and bottom cover and to cross tie top and bottom 5-16 in. gussets, also connected to end sill and cross tie webs with 4 x 4 x 3/8 in. angle connections. Floor stringers:—Two 3 in. 7.1 lb. ship channels continuous between backs of each cross ties, and connected to cross tie gussets and top cover plates. Side sills, 4 x 3 x 3/8 in. angles continuous between and coped into inside of end sill web. The side sills are supported for their length between end sills by cast steel extension brackets. These being riveted to the pedestal sills. Floorboards:—1.25-32 in. thick with plane joints in angle formed by flooring and siding is secured a base board 31-32 in. thick.

**CONSTRUCTION OF CAR SUPER-STRUCTURE**—Side posts:—Three per side, 3 in. x 7.1 lb. ship channel. Door stop posts:—Composed of 1 per side, 5 1/4 ft. structural channel with 4 1/2 x 3 x 3/8 in. angle riveted to web, long leg of angle turned out to form a door stop. All the above posts are secured at their lower end to the side sill angle and extension casting. Corner posts:—4 x 4 x 3/8 in. angle. Each portion of side frame between side door and corner posts is provided with a 3 1/4 x 5-16 in. brace secured to side sill against door post and to side post and corner post. End posts:—4 x 4 ins. x 10.5 lb. tee, 2 per end. Side plate:—4 x 2 in. x 6.7 lb. tee continuous between inside flange of corner post angle. Side and end sheathing of 31-32 in. tongued and grooved boards. Side door is of the sliding type with bottom corners provided with brackets and rollers and arranged to run along the tee track. The top corners of the door are provided with eye castings arranged to fit over and slide along a guide rod. A shutter of pressed steel no. 20 gauge is arranged in upper right hand portion of side door, the bottom edge of shutter is equipped with hinges to enable it to be swung out and down. The door framing consists of 2 1/4 x 2 1/4 x 1/4 in. angles with a centre vertical stiffener of 3-16 in. pressed plate at centre.

**CONSTRUCTION OF CAR ROOF**—The roof is of the camber type, having a carline radius of 15 ft. 6 15-16 ins. Carlines:—12 per car, including end carlines 2 1/4 x 2 1/4 x 5-16 in. angle, vertical leg being bent to form connection to side plate—in addition to plate connection—the other leg carried over side plate to support eaves. Roof boards laid longitudinally and secured direct to carlines. Roof covering of no. 22 gauge galvanized iron.

Regarding the 100 cars mentioned in the opening paragraph, the chief difference is in the accommodation for the brakeman. The principal dimensions and features that differ from the 1,200 cars are as follows:—

Height from rail to centre of buffers and draft gear at brake box end	3 ft.	4 25-32 ins.
Height from rail to top of brake box roof	13 ft.	1 29-32 ins.
Total length over main roof	23 ft.	9 27-32 ins.
Total length over main roof, including brake box	25 ft.	9 21-32 ins.
Inside dimensions—		
Clear length between end protection boards	23 ft.	3 17-32 ins.
Cubic capacity		1386 cu. ft.

The brake gear is operated by hand only from one end to brake mast provided with a spiral worm. This actuates a series of levers, all wheels being equipped with two each, combined brake head and shoe. Both kinds of car are equipped with footboards below each side door opening, brackets for

signals and lamps, end safety chains and suitable hooks and chains, etc., inside car for securing cattle or merchandise.

## List of Canadian Northern Pacific Railway Stations.

Following is a list of station points between Port Mann, B. C., and Yellowhead Pass, showing the mileage of each from New Westminster bridge and the altitudes. The class of station to be built is shown by the figures immediately after the names of the stations:—1 designates a special station; 2, a third class station; 3, combined station and shelter house; 4, section house; 5, shelter; 6, future siding; D. p., division point:—

Mileage.	Stations.	Altitudes.
4.0	Port Mann, 1	16
10.7	Port Kells	26
14.7	Langley, 2	24

We are indebted to T. H. White, Chief Engineer, Canadian Northern Pacific Railway, for the foregoing.

The Inn, St. Andrews, N.B., which closed for the season on Sept. 15, will not be operated as one of the Canadian Pacific Ry.'s hotels in future. The C.P.R. will, of course, continue to operate the Algonquin Hotel, St. Andrews.

# Canadian Pacific Railway Terminal Improvements at Quebec.

The entire remodelling and extension of the C.P.R. passenger and freight facilities on the Palais grounds at Quebec became necessary some little time ago on account of the normal growth of business, and to their proposed use by both the C.P.R. and the National Transcontinental Ry. as a union terminal. The work which is shown on the accompanying plan was started dur-

and will stub-end toward the extension of Ramsay St. The common working and set off tracks for this yard and the wharf tracks will be built between the two and connect with the main tracks well to the west, in order to reduce to a minimum the interference of freight movements with the throat of the passenger station yard.

The new freight sheds are complete and

baggage, mail and express facilities in the west wing.

The station yard will include for the present eight stub end tracks, varying in capacity from 7 to 10 cars and a locomotive, and three through tracks varying from twelve to fourteen cars and an engine. The through tracks are provided for handling pilgrimage trains which run through to

Canadian Pacific Railway Freight Terminals in the City of Quebec.

The building to the left, at the rear of the office building, is the inbound freight shed; the building to the right is the outbound freight shed.

ing the summer of 1914, and is being carried out in such a manner as to keep all facilities in full service. The construction of the new freight facilities released the old ones; these were demolished to make room for the new passenger station, and when that is completed the existing station will be removed to permit of the construction of the passenger car yard. It is intended to have the work all completed by the summer of 1917.

in service. The outbound shed is 30 ft. wide and 360 ft. long, and the inbound shed proper is 50 ft. wide and 460 ft. long, the balance of its length being given over to a 2-story office building. Each shed is served by three tracks, the outbound having a capacity of 27 cars, and the inbound a capacity of 39 cars, while a trucking platform between the two sets of tracks permits of their ready use for less than car lot transfer purposes. The sheds are so

St. Anne de Beaupre, and for such trains as may at some future time run through to the National Transcontinental Champlain Market Station by this route.

The tracks are arranged in pairs at 13 ft. centres, with 18 ft. combination baggage and passenger platforms between pairs. The southerly track will be reserved for handling car load baggage and express business. Space has been left for future additional tracks between the present stub tracks and

Canadian Pacific Railway Freight Terminals in the City of Quebec.

The building to the left is the inbound freight shed, the office building is in the centre of the illustration, and part of the outbound freight shed is shown at the right.

The track leading to the Louise Embankment and the Empress Wharves is to be relocated some 400 ft. to the north, partly on ground reclaimed from the St. Charles River. This will give a more direct route to the waterfront, and also permit of constructing the new team yard in such a position that teams need not cross the heavy train movement to and from the wharves. This team yard, of about 105 cars capacity, will also be built on the reclaimed ground,

located that they may at any time in the future be increased in length as more capacity is required.

The new passenger station, which is under construction, is located on the site of the old freight sheds. The ticket offices, baggage checking counters, and similar public facilities will be located in the portion of the building fronting on the proposed plaza. The waiting rooms and accessories will be in the north wing, and the

the baggage wing of the station, and between the through tracks and the freight sheds.

The passenger car yard stub ending toward St. Paul St. will have a capacity of 130 cars. Its construction has not yet been started, as it will be on the site of the present station and station yard. The heating of this yard, the station and station yard and the freight sheds will all be handled from a central power house located just

## Canadian Pacific Railway Passenger and Freight Terminals in the City of Quebec.

A preliminary report issued at Washington, D.C., from Lieutenant Means, a member of the Alaskan Railway Engineering Commission, gives details of the work done since April 26, when the staff arrived at Sharp Creek, Alaska. A dock equipment with a 15 ton stiff leg derrick was built at Sharp Creek for the unloading of freight. The dock was finished to enable the first cargo of lumber to be discharged May 26. The report continues: "We have now contracted with about 40 stationmen and are now employing about 100 men on force account handling the terminal work and constructing wagon roads. I expect to increase this force to 1,500 or 2,000 men as fast as material and supplies can be shipped in."

For the foregoing information and the accompanying ground plan we are indebted to J. M. R. Fairbairn, Assistant Chief Engineer, Eastern Lines, C.P.R. For the photographs of the freight terminals we are indebted to the W. S. Downing-Cook Co., Montreal, who were the contractors for the freight sheds and office building and also have the contract for the passenger station. D. H. Mapes, Engineer of Buildings, C.P.R., was in charge of construction of the freight buildings and also has charge of the passenger station construction.

# Fuel Consumption on Locomotives.

By T. C. Hudson, Division Master Mechanic, Canadian Northern Railway, Joliette, Que.

The following paper was read at a C.N.R. staff meeting in Quebec recently:

The year 1914 will be recorded in history as one of the most disastrous in recent times. We in this country, although far from the actual seat of war, have felt the effects. The demand for inland transportation the year round has brought into existence three great transcontinental railways, each of which is practising the strictest economy in maintenance, and operation consistent with efficiency.

Coal consumption, being one of the largest operating items of expense, has engaged the attention of railway officials in the past, and is still a warm subject of discussion. It is not my intention to deal with the question of mining, inspecting, transportation, or storage of coal, save to remark in passing it is obvious that a railway purchasing a large quantity of any material should have it given proper inspection by a man familiar with the product. The officer in charge of fuel, in order to get the best results, should co-operate with the operating officials, the mechanical department in particular, as this department consumes about 90% of all coal brought on the line. Where large storage plants are located, the engineering department can assist in reducing the cost of coal by providing the most economical plant to handle it from dump to tender. On a young and growing road this is sometimes difficult, as first cost must be considered and terminal defined, but this is bound to receive attention as maturity is reached.

When criticizing men and methods, we are all prone to forget that the whole world is a compromise. If we take as an instance the supreme law making body of the country we find it to consist of a parliament of men elected by the people, some of whom develop exceptional ability, some average, others are below average, yet all members other than cabinet ministers receive the same salary for service given. It is somewhat the same in railway operation. When we wish to ascertain the efficiency of the men who handle the coal and the locomotives we should compromise between the good and the poor, and find the average. Progress will be marked in so much as we are able to improve this average. This brings us to the question of what can be done to reach this end. Best results are obtained, when all operating officers, from the general manager down, take interest in this matter, and co-operate with the superintendent of motive power, or master mechanic responsible for the supervision and maintenance of locomotive equipment.

The instruction of locomotive men in the proper methods of firing and handling the locomotive is of great importance. The master mechanic should see that the money allowed for supervising and instructing the men is used to the best advantage. He should become thoroughly imbued with the spirit which animated that grand old pagan Seneca, when he remarked, "He that cannot live happily anywhere, will live happily nowhere." Thus fortified he may do effective missionary work. He should keep in personal touch with the men as far as possible, and it will be found beneficial to meet them in a body from time to time to discuss road service matters of economy, and while handing out suggestions he should keep a receptive mind for those offered which may be of practical use. This will create a keener interest and a better understanding toward fuel economy, for after all the men have no way of ascertain-

ing the aim and policy of the company in this matter, excepting through its officials.

Some years ago we got out a series of questions and answers on what we considered good practice. These were used by the road foremen when preparing firemen to pass as locomotive men. Changes and improvements have necessitated the adoption of a more complete treatment on this subject, therefore we have had printed and issued to the men a 1st, 2nd and 3rd series of questions and answers. These are not the opinion of any one man, but are what is considered the best combined thoughts of practical men throughout the continent on this subject.

About a year ago I instituted a system of receiving practical suggestions, tending toward any matter of economy, from the various leaders under my supervision. We are now carrying this further by inviting the rank and file to hand in any suggestions which may create a saving, our object being to make the men feel they are a part of the organization. The master mechanic should select road foremen or travelling locomotive engineers who have ability for the work and energy to apply it. The men selected should be allotted to territory which will permit them to ride on each locomotive at least once a month. They should work in close touch with trainmaster and dispatcher, and assist them in obtaining good road service. I think this is best obtained by allowing each road foreman to devote his time to the men and locomotives on his district, so he may see that the locomotive men and firemen understand their duties, and are following the instructions given them in regard to the proper method of handling and firing locomotives. He should fill out and forward promptly to the master mechanic's office the form furnished, entering on it any defects observed which would prevent the locomotive giving good road service. He should assist the superintendent in cases of discipline, and report to the master mechanic work performed.

Experience has taught me that it is rare that a traffic blockade occurs where the trainmaster, road foreman, and locomotive foreman work in harmony: this unity of purpose assists in keeping down fuel costs. It is the practice to issue a monthly performance sheet showing miles run to one ton of coal, and ton miles per ton of coal. To be of benefit care should be taken to have these as correct as possible, only coal used in service being noted against the mileage and performance of the locomotive; a separate rendering should be shown of coal consumed by the locomotive where no heated shop is provided, and where it must of necessity be kept under steam, and at times maintain heat in coaches, also where soft coal is used to heat shop plants, stations, conductors' vans, steam shovels, pile drivers, or for any other purpose. Where scales for weighing coal are not available, we have found by using the shovel as a unit we are able to ascertain the consumption on the trip very closely, no. 4 shovel carrying about 15 lbs., no. 2 shovel, used on smaller locomotives, slightly over 13 lbs.

The quantity of fuel consumed varies with different conditions on trains, grades, speed, and locomotives. Exact comparisons are impossible unless we know all the conditions, which is not often the case. However, we can compare men and locomotives on similar trains where the schedule is the same, and where an equal tonnage in passenger or freight cars is handled. We re-

ceive a statement each week showing any locomotive failures. It might be beneficial to show unavoidable detentions on the road, which are attributed to the locomotive, and for which, in order to make up and take the train into the terminal on time, the locomotive must burn more coal.

A record on the ton per mile per hour basis would in such cases give credit to the men and the machine. There died six years ago a man who fired the Rocket for George Stephenson. We can mark the great progress which was, during his lifetime, made by the mechanical men in developing the locomotive for the various classes of work, until today it is one of the most effective machines in existence, requiring great care and the prompt reporting and handling of repairs. With the installation of the pneumatic bell ringer and pneumatic fire door, the fireman is now permitted to give more attention to the actual feeding of coal to the firebox.

The successful development of the superheater and application of the brick arch have greatly reduced coal consumption. In order to get most benefit from high degrees of superheater steam, it is necessary to have all tubes bored and clean, and foremen and engineers should be on the alert to note any leaks in superheater units. Cylinder packing, piston rings, and piston valve rings should be kept in good condition. We favor the proper maintenance of the brick arch. The storekeeper by having a stock on hand is assisting to keep down fuel costs. Foremen assist in fuel saving by keeping an eye on the ashpit to see that coal is not wasted when fires are knocked, and by having instructions carried out regarding the overloading of tenders, as coal is expensive ballast. Roadmasters and bridge and building masters are saving coal by instructing their men in proper use of flags, so as to avoid unnecessary delay, as it costs about 300 lbs. of coal to stop and start one of our passenger trains when running about 50 miles an hour, and freight trains in proportion. The speeding of freight trains should be avoided, except in very special cases.

The superintendent who is keeping his freight movements under an average of 13 miles an hour, with a maximum of 25 miles per hour, and who has a dispatcher endeavoring to get trains over the road by avoiding station detentions as much as possible, and by loading to a maximum economical limit, and no more, is going a long way toward fuel economy. Watchmen, by preventing pilfering, and who educate the public that the company's coal is not common property, will save considerable fuel. The car department, in giving inspection to cars, materially assists in lowering fuel costs. Trainmen save coal by keeping locomotive men posted regarding work to be done along the road, thereby permitting the fire to be regulated accordingly. The agent who gauges closely the time at which trains will be ready to leave the yard, and orders locomotives to correspond, is preventing fuel waste. The call boy, by calling crews promptly, thus avoiding terminal delay, is adding his quota. With hearty co-operation and keeping everlastingly at it good averages will be obtained.

The Canadian Pacific Ry. has introduced on its dining cars a buffet, on which cold meats, salads, etc., are displayed under glass covers, giving passengers an opportunity to make a selection, the serving being done by an attendant in white uniform.

# Railway Mechanical Methods and Devices.

## Twin Tell-Tale Hole Drilling Machine at Pere Marquette Railroad Shops.

The P.M.R. shops at St. Thomas, Ont., have in use a tell-tale hole drilling machine for drilling tell-tale holes in staybolts, which is illustrated herewith. It is of the twin type, each machine alike in

## Wheel Lathe Features in Grand Trunk Railway Shops.

On the passenger car wheel lathes in the G. T. R. shops at Stratford, Ont., there are several interesting departures in the equipment for expediting the work, four of which are shown in the accompanying illustra-

tion at d. The wheels to be turned are brought in on the entry track, raised by the jack a, moved forward on the latter until in a position to be lowered on the elevated rails c, rolled into the lathe chuck, the inner ends of the elevated rails raised, when the journals can be chucked, and the machine set up as usual.

The tools are chucked in an air chuck

Twin Tell-tale Hole Drilling Machine.

Fig. 1.—Mounting Wheels in Passenger Car Wheel Lathe.

all particulars. The two parts are mounted on a cast iron frame, and both are driven from a common belt, running over a spindle pulley and intermediate idler wheel. The head is similar in construction to that of a light lathe. On the near end are carriages, each equipped with a double vise jaw, operated by a cross screw and handle. A weight suspended from the under side feeds the carriages forward automatically, and

tions. For mounting the wheels in the lathe for turning, the arrangement shown in fig. 1 is employed on one of the lathes. The whole floor in front of the lathe is laid with steel plating, with rails leading up to within about 8 ft. of the lathe as shown in the foreground. Between the tracks there is the travelling pit jack a, which moves in a floor channel covered by the plate b, which travels with the jack. The limits of

of somewhat different design from the commercial pattern of air chuck, and which was made in the shops. The chuck consists primarily of an air cylinder a, mounted on a bracket on the rear of the tool carriage as shown in fig. 2. On the front of the tool stand there is a heavy screw and nut b, bearing down on a clamp c. The latter is prevented from dropping when the tool d is not in position, by the coiled spring

Fig. 2.—Air Clamp for Tools in Passenger Car Wheel Lathe.

Fig. 3.—Tools for Tire Turning in Passenger Car Wheel Lathe.

when the drill has entered to the correct depth, the carriage is run back by hand by means of the handle on the quadrant, and is locked in the back position by a finger on the quadrant, when the staybolt is inserted. It is then released, and the carriage feeds forward, the one operator being kept busy feeding one head while the other is drilling, so that the process is practically continuous.

The jack movement are from a position over top of the far end of the entry tracks, and the near end of the elevated tracks c, which are T iron sections, hinged at the near end on pedestals d, the far ends terminating on the other side of the centre line of the lathe. In the bed of the lathe under the end of these rods there is an air cylinder by means of which the elevated track may be raised or lowered, pivoting about the

around the bolt b under the clamp c. Under the near end of the clamp c there is a short rod e, on the far end of which there is a small cam, bearing up against the under side of the near end of the clamp c, and actuated from the air cylinder through the lever f. The introduction of the cam and rod in conjunction with the air cylinder is a novel departure from the usual air clamp design with the air cylinder directly under

the end of the clamp, with the latter fulcrumed.

The set of tools used on the passenger car wheel lathe is shown in fig. 3, which, it will be observed, shows the set for both ends of the lathe. The practice in these shops is to use formed tools of high speed steel mounted on soft steel bodies as shown, with the exception of the roughing operation, performed with a plain forged tool. The first operation with the plain forged tool is to rough to approximate shape, with the two tools like a. The flange is then formed with tools b, the tools being fed in until the correct thread diameter is given on the wider portion of the face of the tool. The treads are then formed with the tools x, feeding in the tread diameter set in the previous operation. The final cuts are made with tools d, heeling the tread, finishing in this operation to the M. C. B. wheel gauge, when the wheels are completed. The production averages about a pair of wheels per hour. With the use of the tools shown, a considerable saving in steel results. The soft steel bodies are recessed on the forward end, into which the high speed steel cutters are set by screws. The tools are ground to shape,

be secured. The whole arrangement is very rigid, with little chance for errors to creep in.

### Wheel Lathe Driver in Michigan Central Railroad Shops.

The accompanying illustration shows a handy wheel lathe drive as used in the M. C. R. car shops at St. Thomas, Ont. They are used in pairs, diametrically opposite each other on the face plate of the lathe, the driving pin entering the core holes in the outer face of the wheels. Each driver consists of a base casting, bolted to the face plate, and carrying a square headed swivel pin, through the head of which passes a swivel bolt. A pin through the opposite end of the latter passes into the holes in the driving wheel. Such a driving mechanism is handy for wheel work, as so many wheels are placed in and taken out of the lathe in the course of the day that any small saving in time means much in the ultimate economy. From the arrangement of holes in the base casting, the position of the drive may be varied to suit varying sizes of wheels.

sired point. E shows the staple former die which is bolted to the shaper table. D shows the former, which is held in the tool post holder, at each stroke of the shaper head, this forms a staple over die E. Upon completion of the staple it drops on the incline plane below and is carried into a receptacle. A barrel which has been filled with these staples is shown on the left. We

Automatic Wire Staple Bending Device.

are indebted to G. E. McCoy, Assistant to Chief Draughtsman, Canadian Government Railways, Moncton, for the foregoing information.

### Air Hammer in a Blacksmith Shop.

By W. S. Bazole, Master Mechanic, Rapid Transit Subway Construction Company, New York.

The accompanying illustration shows an air hammer in use in our blacksmith shop: It consists of an E52 Ingersoll-Rand reciprocating drill, from which the piston has

Air Hammer for Blacksmith Shop Work.

been removed and the chuck turned to a taper to fit the block used as the hammer. The tapered end of the piston is inserted in this block and driven home, using two set screws to fasten it. There is a square plate under the front head, which is not necessary as this hammer was originally used for driving sheet piling. The rotation

Fig. 4.—Calipers for Passenger Car Wheel Lathe.

and correctly backed off to shape, so that they may be used a very long time with only a grinding on the upper face from time to time.

It was formerly the practice in these shops to caliper all wheels with the pointer from the cross bar above the lathe. This method is accurate if nothing happens to disturb the position of the crossbar. Trouble was experienced on this score, with discrepancies in the diameters of the pair of wheels, with the result that this method has been abandoned for final measurements, the cross bar only being employed for the roughing stages. The calipers used for the final work are shown in the accompanying fig. 4. They consist of two curved arms of the usual shape, secured together by a screw, the latter with a tightening handle for rapid and accurate adjustment. In the ends of the arms are bearing pins, one of which is stationary, with the other adjustable, consisting of a small knurled headed screw with locking nut, passing through the end of the arm. Through this screw final adjustments may

Wheel Lathe Driver.

### Automatic Wire Staple Bending Device in Intercolonial Railway Shops.

The accompanying illustration shows a device designed in the Intercolonial Railway shops, Moncton, N. B., for making wire staples on a shaper. The staples made are about 7 ins. long, 2 ins. wide, are made of 1/8 in. galvanized wire, and are used as roof board locks on box cars. By the mechanism shown the staples are formed in a very complete manner at the rate of about 500 an hour.

A shows a holder on which is mounted the coil of wire, the latter on unwinding from coil, passing through a straightener B, which is supplied with 5 steel rollers to straighten and remove all kinks from wire. At each stroke of the shaper head the clutch C grips the wire and draws it forward until the end strikes stop F. At the point G a cutter is placed and so arranged that it engages with projecting arm on shaper head, at each forward stroke of shaper head, cutting the wire at the de-

pawls are removed from the machine so that the hammer does not revolve. An old anvil is used for the hammer to strike on, which the writer suggests is not a very good scheme, as owing to the speed of the hammer, the anvil requires to be fastened very tight, as there is more or less a rocking condition. It would be well to have a heavy square casting placed on a good foundation. As will be observed, the drill

is bolted to a 14 x 14 in. yellow pine stick, concreted 4 ft. in the ground. This hammer will operate either by steam or air, and for small work is very successful. In our shops recently the blacksmith had occasion to make some 1½ in. square rock wedges, turning out one a minute with a long taper. For welding small irons or steel this hammer is ideal, saving the blacksmith's helper many blows.

## Birthdays of Transportation Men in October.

MAJOR EVENTS of the day to:

E. W. Beatty, K.C., Vice President and General Counsel, C.P.R., Montreal, born at Thorold, Ont., Oct. 16, 1877.

L. S. Brown, Superintendent, Truro, Sydney and Oxford District, Intercolonial Ry., New Glasgow, N. S., born at Nelson, N. B., Oct. 19, 1864.

R. A. Burford, cashier, C.P.R. ticket office, New York City, born at Brooklyn, N.Y., Oct. 4, 1878.

G. E. Burns, Freight Claims Agent, Eastern Lines, C.P.R., Montreal, born at St. Thomas, Ont., Oct. 6, 1863.

K. J. Burns, Assistant General Freight Agent, Great Northern Ry., Vancouver, B.C., born at Rochester, Eng., Oct. 11, 1878.

F. F. Busted, C.E., formerly Engineer in charge of C.P.R. revision and second tracking, west of Calgary, Kamloops, B.C., born at Battery Point, Que., Oct. 10, 1858.

J. M. S. Carroll, District Manager, Canadian Consolidated Rubber Co., Montreal, born at Ballarat, Australia, Oct. 22, 1877.

C. E. Cartwright, M. Can. Soc. C.E., ex-Division Engineer, C.P.R., Vancouver, B.C., born at Toronto, Ont., Oct. 13, 1864.

G. S. Cooke, Superintendent Grand Trunk Pacific Ry., Melville, Sask., born at Montreal, Oct. 27, 1875.

A. F. Dion, Traffic Agent, Quebec Harbor Commission, Quebec, born at L'Islet, Que., Oct. 1, 1871.

L. V. Druce, Commercial Agent G.T.R. and G.T.P.R., Vancouver, B.C., born at London, Eng., Oct. 20, 1873.

C. E. Dewey, Freight Traffic Manager, G.T.R., Montreal, born at Cheshunt, Eng., Oct. 2, 1873.

C. E. Friend, General Auditor, Canadian Northern Ry., Winnipeg, born at Brighton, Eng., Oct. 12, 1871.

W. P. Fitzsimmons, Commissioner of Industries, G.T.R., Montreal, born at Detroit, Mich., Oct. 27, 1868.

G. Hodge, Assistant to General Manager, C.P.R., Montreal, born there Oct. 2, 1874.

J. H. Hughes, Assistant Superintendent, District 4 Eastern Division, C.P.R., Ottawa, Ont., born at Charlottetown, P.E.I., Oct. 7, 1865.

H. Irwin, M. Can. Soc. C.E., Consulting Right of Way and Lease Agent, C.P.R., Montreal, born at Newgrove, County Down, Ireland, Oct. 27, 1847.

J. W. N. Johnstone, General Passenger Agent, Reid Newfoundland Co., St. John's, Nfld., born at Campobello, N.B., Oct. 4, 1878.

W. M. Kirkpatrick, Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Montreal, born at Kingston, Ont., Oct. 8, 1874.

W. B. Lanigan, Assistant Freight Traffic Manager, Western Lines, C.P.R., Winnipeg, born at Three Rivers, Que., Oct. 12, 1861.

J. W. Leonard, General Manager, Toronto Terminals Co., Toronto, born at Epsom, Ont., Oct., 1858.

Sir William Mackenzie, President, Canadian Northern Ry., Toronto, born at Kirkfield, Ont., Oct. 30, 1849.

C. Malcolm, chief clerk, Auditor of Stores and Mechanical Accounts, Alberta Division, C.P.R., Calgary, Alta., born at Tatamagouche, N.S., Oct. 18, 1881.

W. T. Marlow, Import Freight Agent, C.P.R., Montreal, born at Limerick, Ireland, Oct. 25, 1872.

R. Marpole, General Executive Assistant, C.P.R., Vancouver, B.C., born in Montgomeryshire, Wales, Oct. 9, 1850.

Hugh Paton, President, Shedden Forwarding Co., Montreal, born at Johnstone, Renfrew, Scotland, Oct. 5, 1852.

J. W. Porter, Chief Engineer, Hudson Bay Railway, Winnipeg, born at Aberdeen, Scotland, Oct. 15, 1877.

D. Pottinger, I.S.O., ex-Assistant Chairman, Government Railways Managing Board, Moncton, N.B., born at Pictou, N.S., Oct. 7, 1843.

H. G. Reid, Master Mechanic, Saskatchewan Division, C.P.R., Moose Jaw, born at Pembroke, Ont., Oct. 27, 1863.

W. S. Rollo, joint agent, G.T.R., and Central Vermont Ry., St. Johns, Que., born at Dundee, Scotland, Oct. 8, 1852.

J. K. Savage, Superintendent, District 1, Saskatchewan Division, C.P.R., Regina, born at Forrester, Ill., Oct. 5, 1876.

Sir Thomas G. Shaughnessy, K.C.V.O., President, C.P.R., Montreal, born at Milwaukee, Wis., Oct. 6, 1853.

T. Duff Smith, Fuel Agent, Grand Trunk Pacific Ry., Winnipeg, Man., born at Barking, Essex, Eng., Oct. 2, 1868.

A. B. Spence, Travelling Auditor, Reid Newfoundland Co., St. John's, Nfld., born at Harbor Grace, Nfld., Oct. 21, 1882.

F. Stamelen, Night Locomotive Foreman, C.P.R., Winnipeg, born at Chatham, Ont., Oct. 16, 1863.

E. Sterling, Superintendent Districts 2 and 3, British Columbia Electric Ry., New Westminster, born at Thornbury, Ont., Oct. 3, 1875.

C. E. Stockdill, Assistant to Vice President and General Manager, Western Lines, C.P.R., Winnipeg, born at London, Ont., Oct. 25, 1881.

E. N. Todd, Division Freight Agent, Eastern Division, C.P.R., Montreal, born at Huntington, Que., Oct. 17, 1879.

A. W. Wheatley, Manager, Canadian Locomotive Co., Ltd., Kingston, Ont., born at Ashford, Kent, Eng., Oct. 12, 1870.

**Railway Lands Patented.**—Letters patent were issued during June respecting Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acres.
Calgary and Edmonton Ry. ....	3.61
Canadian Pacific Ry. ....	25.14
Canadian Pacific Ry., roadbed and station grounds ....	.39
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co. ....	1,438.00
Total .....	1,467.14

**The Canadian Overseas Railway Construction Corps**, when last heard from, were at Longmoor Camp, Huntingdonshire, Eng., where they were said to be engaged in revising the location of some of the railway lines in the vicinity. Lieut. Col. Ramsey and Major Hervey were said to have gone to France and Belgium to look over some of the ground of their future work.

The G.T.R. has built four box cars at its Elsdon shops, Illinois.

## Stock Cars for Edmonton, Dunvegan and British Columbia Railway.

The Edmonton, Dunvegan & British Columbia Ry. has, as stated in Canadian Railway and Marine World for September, ordered ten stock cars from the National Steel Car Co., Hamilton, Ont.

The dimensions are as follows:—

Length over end sill .....	36 ft. 9¾ ins.
Length inside .....	35 ft. 10¼ ins.
Width over side sills .....	9 ft. 0¾ ins.
Width inside .....	8 ft. 4¾ ins.
Height top of sill to bottom of plate .....	7 ft. 10¾ ins.
Wheel base .....	5 ft. 2 ins.

The cars are of the wood frame type, the underframe consisting of 2 centre sills 4½ x 9, four intermediate sills 4 x 9, and two side sills 5 x 9 and which is further stiffened by 6 truss rods 1¼ in. passing under malleable iron struts and over cast iron saddles on bolsters. Truss rods are anchored on outside of deadwoods with nuts bearing on cast iron washers and on end sills on steel plates. The truss rod struts are attached to 4 x 11 oak needle beams, the whole secured to sills by ¾ in. bolts. Between bolsters and needle beam and between needle beams is a 5 x 5 in. sub sill bolted to centre sills. The draft sill is of oak 5½ x 8, which is provided with cast iron draft keys between centre sill and draft sill, and constructed to take tandem draft gear with 6¼ x 8 M.C.B. draft springs.

The side framing consists of two 2½ x 5 bolster posts, four 2½ x 4½ intermediate posts, 4 x 5 door post and eight 2½ x 5 braces. All posts and braces rest in cast iron caps and pockets set in side sill and side plate, the whole bound together by ¾ in. tie rods, passing through side plate and side sill. Side plates are of 3½ x 7 yellow pine extending full length of car in one piece and side door headers are of oak 4 x 5 ins. Side door rails and stiles are of oak 2 in. thick, having ½ in. steel bars set vertically in holes bored in top, bottom and centre rails and passing through the intermediate rails. Between door posts is a 1¾ x 7¾ guard rail resting in a cast iron pocket on each post and secured to one post by safety chain. The cars are provided with hay racks, running from end of car to door and designed to swing up to side of car. Sides of car from the eaves downward are lined to 2 in. below hayracks, the remainder of sides being provided with slats. End framing consists of 6 x 6 corner posts, 4 x 4½ end posts, and 4 x 5 braces, all of yellow pine, ends of posts and braces rest in cast iron caps and pockets. At end of car 5½ in. from floor is a swing door with 2 x 2 ft. opening. Beside each end post is a ¾ in. tie rod passing through end plate and end sill.

Roof consists of 1¾ x 10½ carlines of yellow pine cut to fit slope of roof and connected to side plate by ½ in. strap bolts. Ridge pole is 2 5-16 x 5 and purlines 2 x 3 both continuous full length of car. Between the two layers of 13-16 in. roof boards is laid one thickness of roofing paper. Ridge of roof is covered with a strip of galvanized iron 12 in. wide extending full length of car and fastened to roof with galvanized iron nails. Two ¾ in. tie rods pass through side plate.

The cars are fitted with Westinghouse air brake. Safety appliances are in accordance with Canadian Board of Railway Commissioners and United States Interstate Commerce Commission requirements. Trucks are of the arch bar type, with simplex bolsters and roller side bearings and cast steel centre plate. Journal boxes are of malleable iron, suitable for 4¾ x 8 journals. Brake beams are Damascus I-beam type, manufactured by the builders.

## The Death of Sir William Van Horne.

Following the operation on Sir William Van Horne at the Royal Victoria Hospital, Montreal, on Aug. 23 for an abdominal abscess, which was referred to in the last issue of Canadian Railway and Marine World, very encouraging bulletins were issued, as he appeared to have stood the operation well, and for some days he took ample nourishment and slept satisfactorily, but about a fortnight later a bulletin announced that his condition had changed for the worse, his temperature and pulse having risen considerably, and he gradually sank until he passed away on Sept. 11 at 2.10 p.m., surrounded by his family. To the general public the news of his changed condition came as a surprise, but to his family and to his immediate friends it was probably not unexpected, as owing to his condition of health when he underwent the operation grave apprehension was felt from the first. Until some two years ago Sir William enjoyed wonderfully robust health. A few hours after addressing the Canadian Club in Toronto on Nov. 17, 1913, he was taken ill and was laid up for some little time, but he improved materially and made trips to Cuba, besides spending considerable time at his summer home at St. Andrews, N.B. During the past summer his condition caused his family considerable anxiety, and at last, an operation becoming necessary, he was taken to the hospital hurriedly during the night of Aug. 22-23, and was operated on at 2.30 a.m. As stated above, his condition for some days was considered satisfactory, but diabetic conditions developed that rendered recovery impossible.

His funeral, which took place from his house, 513 Sherbrooke St. West, Montreal, Sept. 14, was a remarkable national tribute, the attendance including representatives of the Governor General, the Dominion and the Quebec Governments, Sir Thos. G. Shaughnessy, President, Geo. Bury, Vice President, a number of other directors and a very large number of C.P.R. officials, representatives of the judiciary, the professions, the transportation, banking, manufacturing and other commercial interests, and thousands of the masses. The funeral service in the great drawing room at 10 a.m. was of a very simple character, the pastor of the Church of the Messiah, of which Sir William was a member, reading passages from the Bible and an extract from Emerson's Threnody, treating of life and character and destiny. From the house to the Windsor St. Station the streets were thronged with people. First went four carriages filled with flowers, then the hearse, followed on foot by the only son, R. B. Van Horne, the little grandson, W. C. C. Van Horne, and Sir William's brother, A. C. Van Horne, of Joliette, Ill. Next came Sir Thomas Shaughnessy with R. B. Angus, followed by Sir Edmund Osler and C. R. Hosmer, George Bury and the other vice presidents and heads of departments, and hundreds of other representative citizens. At the station the body was placed on a special train, which left at 11 a.m., having on board R. B. Van Horne and his wife, A. C. Van Horne, and W. F. Lynch, who was for many years Sir William's private secretary, and is now Purchasing Agent of the Cuba Co. in New York. Lady Van Horne and Miss Van Horne, the only daughter, remained in Montreal. The train, which was run at moderate speed, reached Toronto at 8.35 p.m., where it was met by one of Sir William's oldest Canadian friends, who remained with those on board until it left again, about 9 p.m., and ran direct to Joliette, Ill., which was reached the next

morning at 10 o'clock. There it was met by Col. Fred Bennet, of Joliet, one of Sir William's oldest friends, and by a delegation of representatives of the oldest families of Will County, who had known Sir William as a boy there. He was buried in the family plot beside his father and mother. The C.P.R. general offices in Montreal were closed for two hours on the morning of the funeral service there and flags

Horne was elected mayor of Joliet and was that city's first executive. In 1954 cholera swept through the valley and Mayor Van Horne succumbed to the disease. Following the death of the father the mother located in another section of the little city. William was educated in the Joliet public schools, which he attended until 1857. He read every book obtainable, and drew crude maps of engines and of ships. One day he

Sir William C. Van Horne, K.C.M.G. From a photograph taken in 1897.

were half masted on the company's buildings from London to Hong Kong.

William C. Van Horne was born Feb. 3, 1843, in a little loghouse at a small crossroads settlement then called Chelsea, in the wooded country between Frankfort and Mokena, in Will County, Illinois, the son Cornelius Covenhoven Van Horne and Mary Minier Richards. The father was a lawyer of some local repute, but failing fortune compelled his son William to enter the service of a farmer at an early age. The boy hoed potatoes and curried horses, but thought of higher things. When the valley of the Desplaines became the great highway into Chicago, the Van Horne family moved to Joliet. In 1852 the elder Van

took up the study of telegraphy and soon was master of the Morse Code.

He entered the Illinois Central Rd. service as a cub telegraph operator in 1857. This was when the road was under General McClellan and Ackerman and other early-day managers. The new operator received \$40 a month, a munificent salary for a boy whose training had been bounded by the rail fences of an Illinois farm. It is said of him in those days: "He learned to fiddle a little and drum a piano, and, having a talent for drawing, he began to cultivate art. He once drew a caricature of General McClellan on the brown painted side of his telegraph station on the Illinois Central, which came near costing him his place. The picture represented General McClellan

in full regimentals, but in a dangerously undignified attitude."

In 1858 he entered the Michigan Central Rd. service. Here he served until 21 years of age, when he was appointed ticket agent and telegraph operator on the Chicago & Alton Rd. He was afterwards despatcher for three years, for one year superintendent of the telegraph and for three years divisional superintendent of the road. Rising in service, his merits became known, and in 1872 he was appointed General Manager of the St. Louis, Kansas City and Northern Rd. From there he went, in 1874, to the Southern Minnesota Rd. as its General Manager. The line was then in the hands of a receiver, but he extricated it from its financial difficulties. His success was rewarded by the presidency of the company. In 1878 he returned to the Chicago & Alton Rd., as General Superintendent, at the same time retaining the presidency of the other line. On Jan. 1, 1880, he was appointed General Superintendent of the Chicago, Milwaukee & St. Paul Rd., at that time the most extensive one in the United States. In the autumn of 1881, he was appointed by the directors of the Canadian Pacific Railway to take control as General Manager of what was then projected and has since become one of the greatest railway organizations in existence, and opened Western Canada to the world, and he entered on his new duties at Winnipeg, Jan. 1, 1882. His big brain, his intense personality, his tremendous energy, and his ready grasp of every railway problem made him even then a conspicuous figure among railway men.

Sir William's fame will rest chiefly upon the construction and organization of the C.P.R. system. He could not have succeeded without the support of Geo. Stephen and Donald A. Smith, afterwards Lord Mount Stephen and Lord Strathcona. Nor could they have succeeded without him. He had the faith that literally moved mountains. It is true that the Dominion Government gave the company millions of money and a vast land subsidy. But the cash was soon exhausted while the west was uninhabited, and the lands unsaleable. The problem of long and desperate years was to find the traffic upon which it could subsist.

The railway to the Pacific Coast was required to give effect to the terms under which British Columbia had entered Confederation in 1871. Ten years from that date was the time allowed for its construction. At the outset, the work was undertaken as a Government enterprise, but a multitude of delays occurred, until five or six years had passed without material progress in the work. Finally, the Government turned to the syndicate headed by George Stephen. By their original contract the syndicate undertook to form a company to build the road from Callander, a town near Lake Nipissing in Ontario, to the Pacific, and afterwards to operate it. The railway system of Eastern Canada had already advanced far up the Ottawa Valley, attracted mainly by the rapidly growing traffic from the pine forests, and it was from a point almost in connection with this system that the new C.P.R. was to be carried to the Pacific Coast, a distance of 2,550 miles. One section of 425 miles between Lake Superior and Winnipeg and another of 213 miles from Burrard Inlet, on the Pacific Coast, eastward to Kamloops Lake in British Columbia, were already under construction by the Government. This left 1920 miles additional to be completed.

On Feb. 15, 1881, the first sod of the new C.P.R. was turned, and before the end of the year 163 miles had been built on the prairie west from Winnipeg. By this time, however, the directors and their financial

agents in Europe had found that there were difficulties in the way of raising the requisite money. Opposition, secret and open, at home and abroad created a distrust of the undertaking, so that the holders of the charter were in the position of having a work on hand in which delay meant heavy loss and possible complications with the Government, while the money necessary to proceed with due speed was not forthcoming. Attention was called by the enemies of the road to the contract made with the Government providing for the completion of the uninterrupted line within ten years. They declared this was impossible as the formidable obstacles found along the north shore of Lake Superior could not be overcome in twice the stipulated length of time, and furthermore, that the north shore section would never be built because, they felt assured, other routes would in the meantime have come into being, rendering the construction around Lake Superior unnecessary.

It was at this juncture that the company secured the services of Mr. Van Horne as General Manager, and to his knowledge, zeal and industry must be ascribed the rapidity with which the work was pushed forward. Within a few weeks of his appointment Mr. Van Horne made his pres-

### Sir William Van Horne

Where shall those feet tread on the  
unknown way,  
That here explored, untiring, our  
dull sod?  
What shall that mind discover and  
survey  
Upon the illimitable fields of God?

Must we not feel that swift from star  
to star,  
From station unto station, that  
great soul,  
An emigrant, shall reach from worlds  
afar,  
Through wide flung portals, Being's  
perfect goal.

—Barry Dane, in Montreal Gazette.

ence felt. When the enemies of the road began to decry the building of the section north of Lake Superior, he promptly declared for the retention of the original plan, and insisted that an all-Canadian line was absolutely necessary. He plunged into the work with all the strength of his iron nature. His first task was to attack the wilderness on the north of Lake Superior. Twelve thousand railway laborers and from 1,500 to 2,000 teams of horses were set to work, involving the use of a dozen steamboats for the transport of material and provisions. The problem boldly faced by the new General Manager was one calculated to daunt the most venturesome and daring spirit. In his preliminary and personal survey he had found what he afterward characterized as "200 miles of engineering impossibilities." The country it was necessary to cross was a waste of forest, rock and muskeg, out of which almost every mile of road was hewn, blasted or filled up, and in places the filling up of muskegs proved to be a most difficult task. There were moments during the work when even Mr. Van Horne's stout heart almost failed him. Discouraging reports from surveyors and engineers, the discovery of unexpected obstacles, and the varied phases of weather, rain following cold and floods following rain, made the task hard beyond the comprehension of ordinary men.

The Manitoba boom of the early eighties collapsed. There was failure of crops and an attenuated stream of immigration. Prices were low and settlers despondent. Wrong methods of agriculture had been attempted. The settlers from older Canada had no knowledge of prairie farming. There were failures through ignorance, through bad selection of lands, through unwise choice of seed, through unfavorable seasons. The emigration even of Canadians was to the Western States. The immigration from Great Britain was insignificant. In Europe, Canada was unknown, or known only as a British colony of supposedly inhospitable climate and broken by great barren areas. Moreover, the railway's credit was assailed in Europe. Its shares fell to 35%. It was embarrassed by ruthless criticism in Parliament. As originally projected, the railway could not possibly have lived through this period of national stagnation and political attack. Even as it was, the enterprise had to go again and again to the Government for relief.

In the very crisis of its history, when Lord Mount Stephen and Lord Strathcona had pledged their private fortunes to support its credit, Sir John A. Macdonald was only induced by desperate and persistent persuasion to give the aid necessary to avert certain bankruptcy. He was led finally to this decision by the late Hon. Frank Smith, a shrewd and courageous Irish Catholic public man of great wealth and much personal influence, who, seeing clearly the political and national effects which must follow failure of the great enterprise, at length impressed his conviction upon the Government. [Another reference to this crisis will be found further on in this article.—Editor.]

This was the turn of the wheel. Henceforth the road lived upon its own resources, or at least upon the resources of its management. It was the pride of Mr. Van Horne that the pay car never failed to make its regular trip, but at that time there was only a few hours between relief and disaster.

From start to finish, nothing could daunt Van Horne. There was that in the old Dutch stock of the Van Hornes which caused him to hammer away at the problem until he finally succeeded. If he had accomplished nothing else, his victory over the engineering difficulties afforded by the line along Lake Superior's north shore would give him fame enough for one man. While the work of constructing the Lake Superior north coast line was progressing, other portions of the great system were receiving the attention of the tireless General Manager and his assistants. The Rocky Mountains, that formidable barrier of interminable snow peaks, had to be pierced. The obstacles presented along Lake Superior faded into insignificance when compared with those encountered after entering the majestic Rockies and Selkirks. Every conceivable engineering problem was encountered and overcome. Trestles, bridges, cuts, fills and tunnels without number were employed, and to achieve all this money was spent with a liberal hand. It was like campaigning in a hostile country. To rout the forces of nature called for a vast army of men, and this army required a commissary corps as efficient as one accompanying a military body. Pick and shovel, dynamite and blasting powder, formed the weapons of offence; temporary rails and locomotives the transportation; great hordes of laborers the rank and file; intrepid and skilful Canadian and American engineers the staff, and at the head of it all, the General-in-Chief was William Van Horne.

He certainly roughed it in those early

days. It was thrilling when he described his nights on the plains in a pouring rain, sleeping on a wet mattress on the ground, "with the water oozing from the blankets over us, the steam rising like fog from our bodies, and in that way we got many a good steam bath and came off none the worse for the experience."

It is related that sometimes after night-fall the strains of some classic aria would float out over the wild mountain passes. The laborers knew what that meant—that the Big Chief was satisfied with his day's work and was expressing his satisfaction in music on his violin.

Practically every foot of the mountain division of the road was contested and probably every mile of tunnel and track was sealed with the blood of man. The bridging of fathomless chasms and the piercing of many mountains were accomplished only after herculean labor. There are bridges on this mountain division that hang in air—mere spider webs of iron—300 and odd feet above the river they span. There are places where masonry is plastered, so to speak, against the solid rock of mountains. There are ledges midway between heaven and earth, and elevations where the whirling trains plunge headlong into clouds and deep, cool ravines where the roadbed disputes with the darkness the realm of mysterious mountain torrents. There are miles of tunnels and bridges without number. On the mountain division alone the exigencies of the winter season caused the construction company to build 32 miles of snow-shed, and that at the enormous cost of \$64 a lineal foot. Over \$10,000,000 expended as a preliminary precaution against snow.

While the mountain division was carried through, the Government's contractors had finished certain other portions of the road, enabling the C.P.R. to take possession in conformity with the terms of the contract, and to connect the Pacific portion of

the line with that coming from the east. Finally, one rainy day, Nov. 7, 1885,—five and a half years before the time allowed by the terms of the charter,—a party of men associated in the great enterprise assembled in the little settlement of Craigellachie, in the Eagle Pass, B.C., and one of their number, Donald A. Smith,—drove the last spike of the connecting rail, thus establishing a railway from ocean to ocean within Canadian territory. Mr. Van Horne was, of course, one of the party. Before nightfall of that eventful day Queen Victoria sent a telegram to the Governor-General of the day, the Marquis of Lansdowne, congratulating the Canadian people on this national achievement, which Her Majesty regarded as "of great importance to the whole British Empire."

It was the policy of Sir William that enabled the company to survive the hard period of construction and the lean years that followed. Upon its local traffic the line could not exist. Hence he set himself with amazing energy to secure branches in the older provinces, to organize a fleet of steamships on the Lakes and a service on the Pacific. This gave the main line feeders and through business, while the very energy of the management astonished its rivals and greatly impressed the country.

Upon the retirement of the late Duncan McIntyre, of Montreal, as Vice President, Mr. Van Horne took that office, May 14, 1884, and on the retirement of Sir George Stephen, he became President on Aug. 7, 1888.

On May 24, 1894, he was created a Knight Commander of the Most Distinguished Order of St. Michael and St. George, by Queen Victoria, in recognition of his great services to the Dominion and to the Empire in providing the great all-British highway to the Orient by way of Canada.

As President of the C.P.R., Sir William gained a wide acquaintance throughout America. Although for many years en-

gaged in spirited rivalry with the United States railways, he commanded the respect of his competitors and made warm friends among the most distinguished railway men and financiers of the United States.

On June 12, 1899, Sir William resigned the presidency, and was succeeded by Sir Thomas Shaughnessy. He then became Chairman of the Board of Directors, which office he held until May 9, 1910, when he retired, on the ground that his post was "only a nominal one, not at all useful and hardly ornamental."

"You see," said Sir William then, "I am getting old, and I do not wish even to keep up the appearance of attending to business. I am getting out of everything that may make the least demand on my time or freedom. I shall of course remain on the board of the C.P.R. as long as the shareholders see fit to elect me, for naturally the C.P.R. has a large place in my affections. But in such a concern as the C.P.R. there can be but one active head. Sir Thomas Shaughnessy is that head, and has been for a long time, and I need not tell you what a competent head the company has in him, nor how abundantly able he is to manage its affairs without the aid of anybody. It is my heartfelt wish that he will stick to it for years to come."

Sir William retired with the reputation not only of having accomplished the most difficult feat of railway building ever recorded, but of being the most successful railway man the North American continent had produced and the organizer of the greatest transportation company in the world.

After the close of the Spanish American War, Sir William became interested in railway construction in Cuba in view of the vast possibilities for developing its rich natural resources. In the face of many obstacles and difficulties he and his associates persevered until a splendid system had

Sir William Van Horne's funeral train.

The special Canadian Pacific Ry. train waiting at Windsor St. Station, Montreal, to convey Sir William Van Horne's body to Joliet, Illinois. The car at the rear was the Saskatchewan. Sir William's "home on wheels" for over a quarter of a century. Next to it was a 60 ft. baggage car which was fitted as a mortuary chapel. A number of men under the charge of J. W. Bell, Superintendent of Building, Windsor St. station, were at work day and night from the Saturday to the Tuesday fitting this car with beautiful drapery. Each corner had a large wreath of magnolia leaves 3 ft. in diameter and in the centre of the car was a beautifully designed dais for the coffin. The locomotive was beautifully draped in black and white. Nearly a mile of drapery was used in decorating the train and the front of the C.P.R. station and office building.

was constituted. It was in 1900 that he acquired the Cuba Company and became its president. Including the entire main line from Santiago to Santa Clara, and the numerous feeder lines, this new railroad system has something over 1,000 miles of track, which only lacks 200 miles of the aggregate mileage of the 17 other railroads on the island. Some of the principal ports reached by the branches are Baracaco, Nipe, Gibara, Santa Cruz del Sur, Sancti Spiritus and Manzanillo. It was the purpose of Sir William and his associates to encourage colonization and to develop the productive sections of Cuba as rapidly as possible. To this end organized efforts were made by agents of the Cuba Co. to induce immigration from Central and South American countries, the natives of which find the Cuban climate congenial. American colonies have been established along the line of the new railway, and American ingenuity and push are rapidly producing beneficial effects in both a commercial and social way. The Van Horne syndicate bought large tracts of agricultural and timber lands which are being converted into ranches, small farms and sites for settlements. All of the capital invested came from Canada and the United States. The Cuba Railway is pronounced by those who are familiar with the conditions of the island—its marvellous productiveness and the great economic value of its products,—to be an achievement big enough to have made the reputation of any ordinarily successful man.

The railway which Sir William built in the Republic of Guatemala, Central America, has been in operation for some years. It extends from the capital of the republic to Port Barrios, on the Atlantic coast, and is about 200 miles long. The Government of Guatemala had heard so much of Sir William's success in Cuba as a railway builder that they opened up communications with him, the result being that valuable concessions were accorded, and the work was started. The President of the republic and other dignitaries were present at the opening, and Sir William Van Horne was hailed as a public benefactor on the spot.

Sir William's fame as the head of the C. P. R. entirely overshadowed his other business activities. For instance, few outside the actual stockholders knew that he was the Dominion's greatest business authority on the pulpwood question, and the head of the largest paper-manufacturing concern in the Dominion—a concern exporting its manufactures to all parts of the world. Few knew, also, that he took a prominent part in the directing of big mining and steel manufacturing enterprises, and that he had scores of minor interests all connected with the development of the natural resources of the Dominion. He was President of the Laurentide Paper Co.; the Canadian Salt Co.; the Canadian Northwest Land Co.; the Cuba Company; the Cuba Ry Co.; Vice-President of the Dominion Steel Corporation; director of the Duluth, South Shore and Atlantic Ry.; of the Dominion Iron and Steel Co.; the Royal Trust Company; the International Banking Corporation; the Minneapolis, St. Paul and Saulte Ste. Marie Ry.; of the Equitable Life Assurance Co.; the Dominion Coal Co.; the Mexican Light and Power Co.; the Winnipeg Electric St. Ry. Co. He had formerly been a director of the Mexican Consolidated Electric Co.; the Havana Electric Co.; the Federal Sugar Co.; the Commercial Cable Co.; the Postal Telegraph and Cable Co.; the Rio de Janeiro Tramway, Light and Power Co.; and Port of Para Dock Co. He was a promoter of the North American Mail Steamships Company in 1900; of the Pacific Coal Co. in 1901; and the Grand Falls Power Co. in 1905.

Sir William, in 1911, threw himself into the memorable political struggle over the famous Taft-Fielding reciprocity agreement. In an open letter, circulated throughout the Dominion, his voice rang out, vigorous, decisive, and epigrammatic. He was even induced to deliver two or three public addresses, not so much in support of Conservative candidates as in opposition to the fiscal policy of the Laurier administration. He boldly denounced reciprocity as a fatal policy for Canada—"a bed to lie in and die in," and his utterances had a tremendous effect everywhere. As he had never been a politician, and what he had to say about reciprocity had no reference to politics, nor to any particular interests, his words were listened to with profound respect by all classes, and undoubtedly their influence was great. No one doubted that Sir William felt strongly when he went upon the platform. That was not where he belonged nor where he showed to most advantage.

Sir William's collection of art treasures, to which he was constantly adding, was a never-failing source of delight to him. He was a collector of old masters, not for the empty glory of associating his name with that of great artists, but because he was himself an artist, and gloried in having beautiful things about him. His home on Sherbrooke St. West, Montreal, so full of art treasures, was to him a "glorious court," and in it he held constant converse with the great dreamers and artists and the master craftsmen of all ages. His taste in art was broad, even universal, and his knowledge of every known school of art, dating from the earliest historic times down to the very latest post-impressionist period, was positively astounding. And what is more, he not only had the knowledge, but he was himself an artist of real genius. This man, who had earned his own living from the age of thirteen, who had educated himself and risen from the position of an office boy to that of the greatest railway builder of his age, whose life had been a titanic struggle with titanic tasks, this man was a painter of pictures which would adorn the walls of any exhibition, as they already do the walls of many homes.

There is one room in Sir William's home that very few visitors were ever allowed to enter. Its walls are entirely covered with paintings of his own execution. There are many canvasses, large and small—lovely examples of "paysage intime"; great, dignified pictures of wood and meadow, executed with a bold, sure handling of mass and color that bespeaks the master; seascapes that breathe forth the majesty and the mystery of the ocean; impressionist studies of sunrise and of night.

"I never had a lesson in painting," said Sir William to a visitor not long ago, "and never would have one. I don't think much of my own artistic efforts, but what I do know I have taught myself. Most of the pictures in this room were painted in from four to six hours. That picture there"—pointing to a fine impression of the steel works at Sydney, C.B., seen over an arm of sea at night—"I painted between bedtime and sunrise. This one"—indicating a huge canvas depicting a scene in the New Brunswick woods—"took me longer than any other. I was eight or ten hours doing it."

One of Canada's leading painters once said: "This continent lost a great artist when Van Horne became a railway builder."

Sir William's greatest delight was to paint. Many of his pictures he gave away to his friends. Down at St. Andrews, N.B., where he had his summer home, there are many houses which contain examples of his work. Whenever anybody went there and built a beautiful summer home, Sir William

regarded it as a sacred obligation on himself to repay their choice of the location by painting a picture for the newcomers, usually painting a decorative picture of a St. Andrew's scene to be let into the wall over the mantel shelf.

Sir William had no set "picture gallery." His whole house is one. The walls in every room are covered with art treasures. Many of the greatest names in the history of art—Spanish, Dutch, French, English and Oriental—are represented on his walls; and what is more, he not only had secured an exceptionally fine example of many of them, but in a surprising number of instances he had possessed himself of the artist's masterpiece. He would tolerate no junk with a great name attached to it. The picture itself had to be great.

Sir William's most valuable picture is a life-size portrait by Velasquez, which is recognized the world over as the greatest picture that artist ever painted. It is difficult to put a price upon this, but judging by the figures which other pictures by Velasquez have brought, this one would command at least \$500,000.

As befitting a man of Dutch extraction, his collection of pictures by great Dutch artists became a particularly fine one. But his taste in art was so universal that he would not admit any national preferences. He would get enthusiastic just as much over a picture painted by some Chinaman far back in the dim beginnings of history as he would over any Dutch picture, and appeared to be as great an admirer of a portrait by Crotchet, the post-impressionist, as he was of the work of the great Romney.

Sir William was proud to be the possessor of a portrait by Leonardo da Vinci, the painter of that world-famous picture, the Mona Lisa. He considered it as one of his greatest prizes. It is the portrait of a woman, with something quizzical and elusive about the expression on the face.

Among the pictures that particularly appeal to the imagination in his wonderful collection are two portraits dug up from an Egyptian tomb, and painted in a far-off dynasty B. C. The pictures are the work of some genius. In all the essentials they are as skilfully done as any modern painter could have done them. While mellowed by time, they are wonderfully preserved. The coloring is harmonious, and pose and expression perfectly natural.

Sir William's method of cataloguing was unique. As each object was acquired he made a thumb-nail water-color sketch of it in a "day journal," accompanying the sketch with a description of the object, where it was purchased, who made it and its history. Each thumb-nail watercolor sketch became itself a little masterpiece. Every line, mark and variation of coloring was faithfully depicted, with marvellous detail. Later all this was copied into a general catalogue, but instead of a thumb-nail sketch, a life-size sketch was made, also in water color, brilliantly done. In every particular each drawing was made a faithful copy of the original. There are 42 large volumes of this illustrated catalogue in Sir William's strong room, every drawing in them the work of his own hand, every bit of written description his own writing. For the work of one man this catalogue is nothing short of monumental, a sight of it giving one the impression of the work of a whole life-time. Yet every bit of this work had been done late at night. Sir William never felt that he could afford any of the serious hours of the day for this work of cataloguing. Practically all of it was done after 10 o'clock at night. It was one of his recreations after the hard work of the day. He was a marvellously quick worker, with absolute surety of touch in line and color.

Sir William carried in his head a succinct biography of every artist, a cyclopaedic knowledge of every period and of every school; he had a sympathetic insight into the painter's meaning, his composition, texture and coloring.

Pictures comprised only a part of Sir William's treasures. He had a wonderful collection of the beautiful things which come under the general description of objects d'art. Many of the world's greatest past and present master-craftsmen are represented in this collection and every object in the collection—there are hundreds of them—had been catalogued by Sir William himself.

Many years ago he started out to acquire original models of ancient war vessels, and he got together the most complete collection of them in the world. The models belong to the hey-day of the sailing age, and they are the originals of many of the most famous battleships in the great Dutch, Spanish and British navies of centuries ago. For years he was practically alone as a connoisseur of old-time war vessels, and Europe yielded him her best in this department. To-day these models are almost priceless, and they are eagerly sought after. Very proud was Sir William of his great Armada, for every model in this collection is the original model of an historic battleship.

Sir William's collection as a whole represents a big fortune in itself. Nobody except himself ever knew what it had cost him, and he wouldn't say. But he did on one occasion hazard a guess as to what it is worth. "Perhaps it is worth about \$2,000,000," he said. Considering that one picture alone—the Velasquez—is worth at least \$500,000, his estimate would seem to be an exceedingly conservative one, for his great mansion is filled from floor to roof with artistic treasures.

Sir William was a Governor of McGill University, of the Royal Victoria Hospital and of the Protestant House of Industry, a member of the Committee of Management of the Montreal Homoeopathic Hospital, and Vice-president of the St. John Ambulance Association, a councillor of the Montreal Art Association and a vice president of the National Arts Club of New York.

Sir William held peculiar ideas on the subject of sleep. His doctrine was that sleep is just a habit. Therefore instead of spending one third of his time in bed, like ordinary mortals, he went to bed only when he was thoroughly convinced that it was imperatively necessary in the interests of his health. He thought nothing of staying up nearly all night, and making up the deficiency by snatching a few winks here and there during the day. He had the knack of commanding sleep whenever and wherever he willed it. He could doze off whenever he liked for five minutes, and wake up at the end of that time thoroughly refreshed. He had such an intense interest in life that he felt he could not afford to sleep, except by way of indulging in brief intermezzos. His great business interests—although he had long since "retired" into private life—occupied much of his attention, for the rest, travel, art and study and the companionship of kindred spirits kept every waking moment occupied. Even in his most strenuous years Sir William always found time to devote himself to other pursuits than those of every day work. For instance, he was an excellent violinist and had never allowed his ability to render classical music to become rusty. He enjoyed farming on the model plan, and he was passionately fond of incessant movement and travel.

[The foregoing sketch is not original, but is a compilation of matter gathered from

various sources, particularly from the Montreal Star, which devoted a large amount of space to the subject.—EDITOR.]

Few things show Mr. Van Horne's foresight more forcibly than his decision when he assumed the C.P.R. general managership that the company should control everything connected with its operations, and that there should be no outside concern reaping earnings that should belong to its shareholders. Profiting by his experience on the Chicago, Milwaukee and St. Paul, he absolutely refused to hand over to either of the then two great sleeping car companies in the United States the right to operate over C.P.R. lines, and he had sleeping cars built as rapidly as use could be found for them. The first through train from Montreal to Vancouver had C.P.R. sleeping cars, which were probably ahead of any that had been built up to that date, and no outside sleeping cars have ever been run on the company's lines, except in a few cases where it is absolutely necessary on account of through trains running partly over United States lines. He decided to organize the company's own telegraph service, selecting one of the brightest young telegraphers of that day, Chas. R. Hosmer, under whose vigorous management the lines were built, not only along the company's railways, but through a large outside territory. An advantageous alliance was effected with the Mackay-Bennett telegraph system in the United States and with its Atlantic cable system, and as a result the C.P.R. Telegraphs is to-day one of the two largest on the American continent. Similarly there was developed the great hotel system, stretching from New Brunswick to British Columbia, while the restaurants all along the line and the news business on the trains and vessels are operated directly by the company. Steamships on the Great Lakes were a necessary adjunct of the rail services, and three vessels surpassing anything then on the inland waters were placed on the Georgian Bay, Lake Huron and Lake Superior route. Next the Pacific Ocean was used to secure traffic to and from the Orient. The most beautiful yacht like craft were put in service between British Columbia, Japan and China, and a large volume of through traffic was secured for the transcontinental lines. Later came the Atlantic steamship service and Mr. Van Horne realized one of the most cherished of his desires, the ability to ticket passengers through from Liverpool to Hong Kong over a continuous C.P.R. route. The Dominion Express Company was formed to handle the express traffic, its stock being all held in the C.P.R. treasury, and W. S. Stout was placed at the head of it, a choice which has been abundantly justified by the results.

Of all the men connected with the early history of the C.P.R., Sir William Van Horne stands out, not only as its builder and the creator of its unique organization, but as its prevailing dominant figure in many other matters. Lord Mount Stephen has sometimes been given the principal credit for the carrying through of the great undertaking, and there is no doubt that he was a tower of strength to it, but the writer, who knows something of the inner history of the company in its earlier years, has no hesitation in saying that Van Horne was the man who saved the situation at the most critical period of its history. As mentioned in the preceding sketch of his life, early in 1885 it became imperatively necessary to seek some re-arrangement of the company's finances, which would enable it to procure the capital necessary to make provision for the large volume of traffic which it had developed, as well as for the

great increase which it was felt certain would take place on the opening of the through transcontinental line in the spring of 1896. The Dominion Government was applied to, but Sir John Macdonald and the majority of his colleagues could not be persuaded to agree to the proposals made, although Sir Frank Smith strongly urged them. Mr. Stephen's visit to Ottawa in connection with the matter absolutely failed, and the company was within a day of the due date of a large amount of liabilities. When Van Horne was advised of the situation he rushed to Ottawa by a special train that made a record trip and put the circumstance squarely before the then Minister of Railways and Canals, the Hon. J. H. Pope, who was so impressed by the vigorous presentation of the facts, and of what a continued refusal would result in, that he at once sought Sir John Macdonald, and, aided by Sir Frank Smith, secured the Premier's acceptance of the company's proposals and a guarantee to the company's bankers, which enabled it to tide over its temporary difficulties. Had not Van Horne taken this prompt action and put his whole driving force at work, the company would have had to default in its payments, the bank with which it did business would have been placed in a very serious position, and a national panic would probably have ensued. The arrangement, which is now a matter of history, was approved by Parliament, and the company was placed in a stable position. This is not written with any idea of lessening the credit due Lord Mount Stephen for the great work he performed from the inception of the company until he retired from the presidency in 1888, but to put on record an indisputable fact and to show beyond all question that the C.P.R. owes not only its construction, but its actual uninterrupted existence as a company, to Sir William Van Horne.

One of Sir William's earliest selections for an appointment on the C.P.R. was Thos. G. Shaughnessy, whom he brought from Milwaukee and rapidly promoted as a result of having successfully filled every position occupied. Sir Thomas' continued able administration of the great enterprise, handed on to him by Sir William, is the best evidence of the latter's faculty to read character and to judge of ability.

Sir William was intensely human. Under the sometimes apparently brusque exterior was a sympathetic and most kindly heart. When "Jimmy" French, who was the colored porter on his private car Saskatchewan for many years, died, Sir William attended the funeral and followed the body to the grave.

**C. P. R. Stockholders.** Sir Thomas Shaughnessy is credited with stating recently that C. P. R. common stock is held by 40,468 persons, of whom 5,138 are Canadian holders. Of the \$260,000,000 of common stock, 62.88% is held in Great Britain and Ireland, 13.64% in Canada, 10.39% in the United States, 5.33% in Germany, 5.63% in France and 2.13% in other countries. Since June 1913 the percentage of British holdings has increased by 2.88%, while the holdings in the other countries named have considerably decreased, German holdings dropping from 15% to 5.63%.

**American Association of General Baggage Agents.**—As a result of a correspondence vote, the annual convention, which it was at first intended to hold at Los Angeles, Cal., in September, will be held at Kansas City, Mo., Oct. 13 and 14. J. L. Quick, General Baggage Agent, G. T. R. and G. T. P. R., Toronto, is Secretary.

## Prominent Men's Comments on Sir William Van Horne's Death.

**The Right Hon. Sir Robert Borden,** Minister of Canada: "I have learned with deep regret of the death of Sir William Van Horne, who has been for many years a conspicuous figure in the national life of our Dominion. He was distinguished not only by his remarkable ability and energy, but by the wonderful versatility of his fine intellectual powers. His keen insight into all that concerned the progress and welfare of Canada, and the wonderful opportunities afforded by his career, gave him a great grasp of the difficulties and problems attending the rapid growth and development of our country. Before leaving for England in June I asked him to accept the Chairmanship of a Commission which was then announced, and he had agreed to undertake the task. Shortly afterward, however, his health began to fail, and the constitution of the Commission was postponed until my return, when I learned of his serious illness. I know that it was his keen and intense desire to be of service to Canada in every possible way in the great struggle through which we are now passing, and his declining health alone prevented him from undertaking the service in which his ability and experience would have been of the greatest value."

The Commission above referred to, to which Sir William was to have been appointed as Chairman, was the one announced prior to the Premier's departure, to inquire into and make recommendation upon a large range of problems, including transportation, agricultural production, finance, unemployment, etc. Such a commission had been asked for by the delegation of Mayors which visited the capital early in the summer.

**Sir Thos. G. Shaughnessy, K. C. V. O.,** President, C.P.R.—"I first met him in 1880, when he became General Superintendent of the Chicago, Milwaukee, and St. Paul Ry. At that time I was connected with the purchasing department of that line. At the end of 1881 he accepted the appointment of General Manager of the C.P.R., and came to Canada. A fortnight after he asked me to accept the position of General Purchasing Agent for the C.P.R., but there were reasons why I could not accept the offer at that time. A few months later, when he urgently repeated the invitation, I decided to come and take up the post. From that time till the date of his death, Sir William and I have been intimate business and personal associates; and although in recent years his interests have been in one direction and mine in another, there is, I feel sure, no person, apart from the members of his own immediate family, who is more grieved by his death than I am. Probably I knew him more intimately than any one else. His was a great mind, a great heart and a lofty soul."

**Sir Donald Mann,** Vice President, Canadian Northern: Sir William Van Horne was a genius and one of the biggest men of his time. He never realized how great a man he was himself. In my opinion the greatest work he did for the C.P.R. was in the locating of its lines for traffic production purposes, the location of the 'Soo' line being an example of his farsightedness. As an operating man Sir William had few equals on the North American continent, and his knowledge of and experience in operating has been of incalculable value to the C.P.R. Of a most lovable disposition, he was universally liked and esteemed."

**R. B. Angus,** director, C.P.R.: "Sir William was a very dear friend of mine. His loss is a great blow. He was a man of un-

common ability and remarkable foresight, and he was very very highly appreciated by all who knew him."

**Charles R. Hosmer,** director, C.P.R.—"I have been a very intimate friend of Sir William's for 30 years, and have often remarked that there are not half a dozen men on the whole continent who were his equal. We all hold a very deep affection for him, and he was one of the ablest associates we could have had. He was a great business man but a real boy outside of his work, being very enthusiastic in everything he took up and was filled with boyish enthusiasm and eagerness over it all. His loss makes a big gap that it will be hard to fill."

**James J. Hill,** of St. Paul, Minn., formerly President Great Northern Ry.: "Sir William was a dear, close, personal friend of mine. I knew him well back in the seventies. He was a self-made man in every sense of the word. He started his railroad career as a telegraph operator and worked his way rapidly to positions of importance on the Chicago and Alton, Chicago, Milwaukee and St. Paul and other railways in the United States before he allied himself with the Canadian Pacific. He put his great personality into his work in Canada, and made of the Canadian Pacific one of the greatest railway systems of the world. He was a man of broad ideas, progressive and modern. To-night I can think of no one man whose loss in the development of business and railroad development could be compared with his."

## The Rogers Pass Tunnel Suit.

Canadian Railway and Marine World for September mentioned briefly that the British Columbia Court of Appeal had given a decision in the case of McIlwee & Sons against Foley, Welch & Stewart for practically the full amount claimed. The Vancouver Province gives the following particulars: "By allowing the appeal of J. McIlwee & Sons, tunnel drivers, of Denver, Col., and dismissing the cross appeal of Foley, Welch & Stewart, the Court of Appeal gave a judgment which, if expressed in dollars and cents, may mean anything from \$500,000 to \$800,000. The claim, which was originally for \$527,000, is now to be amended to a claim for \$800,000 before the case comes again before Mr. Justice Clement to assess the amount of damages."

"The suit in which such enormous figures are involved arises out of the contract to run the pioneer and heading tunnels for the great tunnel under Mount Donald, which the C.P.R. is boring at Rogers Pass in the Selkirks. The tunnel, which is approximately five miles long, is to be finished a year hence. Under modern systems for tunnel boring, a pioneer bore about 10 ft. in diameter is first driven at a distance from the main tunnel of some 50 ft. This enables the main tunnel to be attacked from half a dozen different points, and proves a great economy in time for construction."

"The contract for the entire tunnel was let to Foley, Welch & Stewart, who in turn sublet the contract for boring the pioneer and heading tunnels to McIlwee & Sons. In addition to the ordinary contract for the bore, a bonus of \$1,000 a foot for every foot bored in excess of a stipulated amount per month was offered as a special inducement for record speed by the McIlwee firm. The figure meant that the McIlwees would have to break the American record for rapid tunnel work to touch the \$1,000 a foot bonus.

A limit of \$250,000 was placed on the amount of the bonus.

"In September, 1914, after the McIlwees had been at work on their contract for four months, and had proceeded with such rapidity that they claimed that they had earned \$215,000 bonus in addition to the profits of their contract, troubles arose between them and Foley, Welch & Stewart. The engineers for Foley, Welch & Stewart complained that the McIlwees were using too much compressed air for their machines and fans and hindering the other workmen. After trouble and counter charges by the McIlwees that the chief contractors were purposely holding back the work, the McIlwees were ordered to stop work on the ground of disobedience of instructions given by the chief contractors' engineers. Later, after some six weeks of negotiations, Foley, Welch & Stewart offered to allow McIlwees to resume work."

"Instead of resuming work the McIlwees entered suit against Foley, Welch & Stewart for the full amount of the bonus and profits on the contract, totalling \$527,000. At the trial, before Mr. Justice Clement and two assessors, experts from all parts of the continent were called, the hearing lasting three weeks. The plaintiffs' counsel contended that the stoppage was unwarranted, and entitled the plaintiffs to full damages for breach of contract. They suggested that the stoppage was deliberate and was intended to prevent the McIlwees from reaping the profits of a fat contract. Defendants' counsel contended that Foley, Welch & Stewart were justified in stopping the McIlwees for disobedience, and that their offer to allow them to resume work was an answer to the claim for damages for breach of contract. They argued from the evidence of geological experts that the plaintiffs were not entitled to any of the \$215,000 bonus they claimed to have earned, as the rapid boring had been done in soft rock, and that later on in the heart of the mountain extremely hard rock would be encountered, which would reduce the monthly average speed and mean that no bonus at all would be earned."

"In his judgment at the trial, Mr. Justice Clement said he found that McIlwees should have returned to work on Nov. 9, when invited to do so, and their failure to return to work prevented them from obtaining damages for breach of contract. He disallowed the claim for bonus, and gave judgment for \$32,000, which comprised damages at the rate of \$600 a day unearned profits for the period from the time of stoppage of work until Nov. 9."

"The case was argued at great length before the last sitting of the Court of Appeal, both sides having entered appeals. The result of the appeal is that the judges, with Mr. Justice Gallihier dissenting, have allowed McIlwees appeal in full with costs, and dismissed the cross appeal of Foley, Welch & Stewart. Chief Justice Macdonald and Mr. Justice Irving, in their written judgments, say they find that McIlwees are entitled to the full amount of the bonus claimed, and also to all the damages for loss of profits they can show on a reference to the trial judge. At the trial Mr. Justice Clement found these damages to be at the rate of \$600 a day. The costs of the trial are said to amount to about \$8,000, and of the appeal to about \$5,000."

As stated in our last issue, Foley, Welch & Stewart will probably carry the case to the Supreme Court of Canada.

The Canadian American Railway Construction Co. has been granted a license under part 4 of the Manitoba Companies Act, and J. M. Wiley, Winnipeg, has been appointed attorney and agent for Manitoba.

## A Personal Tribute to Sir William Van Horne.

To me Sir William Van Horne's death is a severe blow and irreparable loss; the termination of an intimate friendship of over thirty years which I shall always look back to as one of the greatest privileges of my life.

When, in the autumn of 1881, Mr. Van Horne first visited Winnipeg with Mr. J. J. Hill, who, at the request of the other members of the Canadian Pacific Railway "Syndicate" (as its original directors were designated) to secure the best available man for the stupendous task of building Canada's first transcontinental railway and

at length. In many a conversation he told me of difficulties that were being encountered and of plans for the future that necessarily could not be made public, and I think I can say without egotism that in matters of this nature I enjoyed his confidence to at least as great an extent as any other person not on the company's directorate or in its service, a confidence the respect of which he often spoke of in after years. Looking back over the years that have passed I realize how great was his foresight, how far he planned ahead and how very rarely his judgment was astray.

roundings of his own home, and for other unvarying kindnesses extending considerably over a quarter of a century.

The last rail on the C. P. R. main transcontinental line was laid at Craigellachie, B. C., Nov. 7, 1885, after what was described in the directors' report for that year as "Fifty three months of arduous labor, some anxiety and much unfair and undeserved hostility." By a strange coincidence on May 25, 1894, I was at Craigellachie, the scene of Mr. Van Horne's triumphal completion of his great life work, being detained there for some three days by a series of mud slides

917 SHEARBRIDGE STREET

Montreal  
9<sup>th</sup> June 1894

Dear Brewster -

Very few,  
I assure you, of all  
the congratulations I  
have received have  
given me as much  
real pleasure as yours  
for, among other reasons  
you were the very  
first acquaintance I  
made in Canada. I  
had not then met Sir  
Donald Smith and Angus  
was at the time a  
resident of St Paul.  
When I reached Winnipeg

for the first time early  
in October 1881 you  
were the very first  
man I met on the  
station platform and  
then commenced an  
acquaintance - a friendship  
which has never ceased  
for a minute to be a  
pleasure to me.

I thank you with  
all my heart, dear Brewster  
for all your kind expressions  
and good wishes and  
I hope soon to have  
an opportunity to repeat  
my thanks in person.  
Sincerely yours  
W. Van Horne  
Action Brewster }  
Wm. B. G.

organizing its staff, had selected him, I was, among other duties, editing the Manitoba Free Press' railway department, and went to the C. P. R. station to interview him. Vividly do I remember the lasting impression I then formed of him, his commanding presence, his rugged health, his evident determination, his epigrammatic answers, his abundant humor and kindliness.

He assumed his duties at Winnipeg on New Year's Day 1882, and it was part of my work to call almost daily at his office, to which I soon had a clear right of way. Busy as he was, generally working there far into the night, he was invariably courteous and willing to give information as to the company's operations, which he often explained

Mr. Van Horne removed his office from Winnipeg to Montreal late in 1882, but during the construction period he visited Winnipeg very frequently, and after that less often, on most of which occasions I had the privilege of meeting him there, as well as, particularly during later years, in Montreal, and in addition we corresponded frequently. I have an intense feeling of gratitude to him for many personal kindnesses, of great thoughtfulness shown me in some of the happiest and some of the saddest periods of my life, for most valuable advice on many occasions, for much hospitality, including most enjoyable trips over portions of the lines on which I had the privilege of accompanying him, and in the charming sur-

roundings of his own home, and for other unvarying kindnesses extending considerably over a quarter of a century. The last rail on the C. P. R. main transcontinental line was laid at Craigellachie, B. C., Nov. 7, 1885, after what was described in the directors' report for that year as "Fifty three months of arduous labor, some anxiety and much unfair and undeserved hostility." By a strange coincidence on May 25, 1894, I was at Craigellachie, the scene of Mr. Van Horne's triumphal completion of his great life work, being detained there for some three days by a series of mud slides

Few but those who were on the spot in the early eighties have any idea of the col-

usual task Mr. Van Horne undertook and of the seemingly unsurmountable difficulties which he overcame, compared with which transcontinental railway construction to-day is a comparatively easy task. West from old Manitoba the route had to be decided on and construction pushed through an unsettled prairie country, a southerly way had to be found through the Rockies and the supposedly impenetrable Selkirk Mountains, all supplies and construction material had to be taken in from the Winnipeg and Pacific Coast termini, the former of which had no eastern Canadian connection, but never did a contractor have to wait, and continental track laying records were established for both a day's and a season's work. North of Lake Superior the construction difficulties and the getting in of supplies were gigantic tasks, but he grappled with them successfully, and, instead of taking the ten years allowed by the contract between the Government and the company, completed in half that time the great railway that will be his enduring monument and an emphatic witness to his indomitable will, his untiring energy, his organizing ability and his absolute thoroughness. Never was a railway more honestly built and never did shareholders get better value than for every dollar that was put into it.

The new Union Station, Toronto, on which work has been started.

From the day he first set foot on Canadian soil Sir William Van Horne was a never varying believer in the great future of the country, and it is not too much to say that he was one of the very first to really impress on Canadians generally the immense potentialities of the Dominion and especially of the vast territory west of Lake Superior. For the development of its latent resources, altogether outside of the railway sphere, he labored incessantly, and no native born Canadian could have performed more thorough service than he did to the country of his adoption and of which he soon became a naturalized citizen.

He was a man of gigantic intellect, an able administrator, largely self taught, with a marvellous memory for his omnivorous reading on most varied subjects, a recognised authority on geology and art, a most thorough man on any subject he became interested in, a charming companion, an always interesting conversationalist, a loving husband and father, with thorough domestic tastes, and a loyal and unvarying friend. Among the real makers of Canada none will occupy a higher place in its history.

ACTON BURROWS.

The Canadian Pacific Ry., according to a press report, proposes to cut a trail through the Rocky Mountains from Bany to Lake Louise, Alberta, about 60 miles, during 1916.

### Starting of Work on Toronto Union Station.

H. G. Kelley, Vice President, Grand Trunk Ry., and President, Toronto Terminals Railway Co., gave the following statement to the press Sept. 26:

"Preliminary arrangements having been concluded for commencing work on the construction of the new union station at Toronto, the contractors have been instructed to proceed with this work. On account of the large expenditures involved at a time when the world's money market, and more especially the source from which Canada has been accustomed to obtain capital, is practically closed for other than war purposes, it appeared for a time that the undertaking would have to be indefinitely postponed. Arrangements were finally completed, however, with the Bank of Montreal for providing the funds necessary to allow the work to go forward, and the construction of the new building will therefore proceed at once.

"In the preliminary studies and final design adopted by the directors and approved by the Board of Railway Commissioners, every comfort and convenience for the travelling public and the City of Toronto has received careful attention. Much time has been devoted to the study and personal in-

Ardley, Auditor; W. C. Chisholm, General Solicitor; J. R. W. Ambrose, Chief Engineer.

The construction work will be under the general direction of Chief Engineer Ambrose, who will be represented by H. K. Ferguson as clerk of works. W. T. Griffiths will be Superintendent for the contractors, P. Lyall & Sons Construction Co.

The new station, which will face Front St., and extend from Bay St. to York St., was fully described and illustrated in Canadian Railway and Marine World for . .

**Canadian Railway Club.**—Wm. Roger, A.M. Can. Soc. C.E., Elevation Draughtsman, Canadian Pacific Ry., read a paper before the club in Montreal, Sept. 14, on hydraulic presses vs. power presses in connection with the manufacture of cartridges and shells.

**The Canadian Northern Ry. was fined \$50** and costs in the Manitoba Provincial Police Court, Winnipeg, recently for failing to report to the factory inspectors two accidents at its shops, as required by the Factory Act. Notice of appeal was given.

**The Grand Trunk Railway Patriotic Association** of Toronto, the inauguration of which was announced in our last issue, has purchased two motor ambulances for use at the front, and will send a third one should it be required.

spection of the latest approved railway terminals on the American continent, and it is hoped and believed that Toronto will have, in the new station, when completed, a railway terminal second to none. The east wing of the building will be owned and occupied by the Dominion Government as a postal station, and, by reason of its location, immediately adjoining the railway tracks, the receiving and despatching of all mail matter can be conducted instantly, thus avoiding delays which occur when mail matter must be carried to and from trains to postal stations located at distant points in the city. The west wing of the building will be occupied as railway offices by the Grand Trunk and Canadian Pacific Railway Companies, who have equal ownership in the terminals, while the central portion of the building will be the general concourse to and from trains, in which will be located the ticket offices and other accommodations for the convenience of the public. The work will be carried through to as early a completion as is practicable with the magnitude of the undertaking."

Work was started on the site Sept. 26, and it is expected to get the excavations made and the foundations built during the ensuing winter. The officers of the Toronto Terminals Co. are: H. G. Kelley, President; Geo. Bury, Vice-President; H. Phillips, Secretary; H. E. Suckling, Treasurer; J. W. Leonard, General Manager; W. H.

**The Great Northern Ry. (U. S. A.)** has obtained authority from the Board of Railway Commissioners to make certain reductions in its train service in British Columbia. Full particulars are given on another page under "Orders by the Board of Railway Commissioners," viz, orders 24161 and 24163.

**The Mount Lehman Lumber, Timber and Trading Co., Vancouver, B.C.,** has been granted permission to build its logging railway under the British Columbia Electric Ry.'s New Westminster-Chilliwack line at mileage 30, with a head room of 12 ft.

**Canadian Northern Ry. Coal Supply.**—In operating the line north of Lake Superior coal will be supplied from Port Arthur for about 300 miles east and from that point east coal will be hauled from Toronto and other coaling stations in the east.

The Dominion Government engineers and the contractors engaged on the construction of the Hudson Bay Railway, are reported to have offered to supply two machine guns and the men to operate same, to be attached to the 45th Battalion of the Brandon Regiment.

S. Hammett, formerly treasurer of Toronto Lodge 108, Brotherhood of Railway Trainmen, Belleville, Ont., was sentenced to a term in Kingston Penitentiary, Sept. 9, for misappropriating \$800 of the lodge's funds.

# Mainly About Railway People Throughout Canada.

Mrs. Smith, wife of J. F. Smith, General Freight Agent, C. P. R., London, Eng., died there Sept. 7.

**W. F. Stevenson**, General Agent, Freight Department, C. P. R., New York, died there, Aug. 21, aged 60.

**J. Walker**, formerly Assistant Engineer, Barrie Division, G. T. R., Allandale, Ont., is on active service in Europe.

**C. M. Greene**, of New Orleans, La., who died at Cobourg, Ont., Sept. 15, aged 75, was a pioneer railway builder in the United States.

**J. L. Doupe**, Chief Surveyor, Western Lines, C.P.R., Winnipeg, has been elected a member of the American Railway Engineering Association.

**Abel Grills**, General Roadmaster, G.T.R., St. Thomas, Ont., has been elected Second Vice President, Roadmasters and Maintenance of Way Association, for the current year.

**Major C. N. Monsarratt**, A.M.Can.Soc. C.E., Chairman, Quebec Bridge Commission, has been appointed officer commanding the 5th Royal Highlanders, succeeding Lieut. Col. J. G. Ross.

**Major W. B. Kingsmill**, of Saunders, Torrance & Kingsmill, Toronto, solicitors, Michigan Central Rd., has been promoted to Lieutenant Colonel and to command the 10th Royal Grenadiers.

The Anglers' Inn, a summer resort on the Rideau River near Portland, Que., which was destroyed by fire Sept. 1, is stated to have been owned by **I. G. Ogden**, Vice President, C. P. R., and was valued at \$12,000.

**Gordon Reed**, cadet, Royal Military College, Kingston, Ont., and son of Hayter Reed, formerly Manager in Chief, C. P. R. hotels, has received a commission in the Imperial Army and gone to England.

**H. Le Jeune**, formerly of the C.P.R. Hotel Department, who has lived at the Royal Alexandra Hotel, Winnipeg, for several years, was stricken with paralysis, Sept. 19, while looking over the improvements in the C.P.R. station there.

**James Carson**, of Carson and Whan, contractors, who held a sub contract on the Edmonton, Dunvegan and British Columbia Ry., was run over by a grader and killed, at Smoky River, Alta., towards the end of August.

**Sir Thomas Tait**, President, Fredericton & Grand Lake Coal & Railway Co., and Lady and Miss Tait, who spent most of the summer at St. Andrews, N.B., have returned to Montreal and taken a suite at the Ritz-Carlton Hotel.

**John Aird**, who has been appointed General Manager, Canadian Bank of Commerce, began work with the old Northern Ry. of Canada, and was subsequently secretary to its Managing Director, the late F. W. Cumberland, before entering banking service.

**Brigadier-General Nanton**, was received in audience by the King recently, and invested with the insignia of a Companion of the Order of the Bath. He is a brother of A. M. Nanton, of Winnipeg, who is one of the C. P. R. directors.

**J. H. Plummer**, President, Dominion Steel Corporation, and of its subsidiary companies, the Cumberland Railway and Coal Co., and the Sydney and Louisburg Ry., is reported to have been told by his physician that he must take a rest.

**W. E. Mullins**, who was formerly in G. T. R. service, and who has been for some time with the United Fruit Co., latterly as Gen-

eral Manager, Costa Rica Division, San Jose, has been appointed General Manager in charge of freight traffic, with office at New York.

The will of the late **F. S. Hammond**, who was a passenger on the s. s. Lusitania, when she was torpedoed by Germans, and who was a son of the late H. C. Hammond, of Toronto, one time President of the Northern Navigation Co., left an estate valued at \$100,333.34 to the widow.

**T. S. Moise**, General Manager, Central of Georgia Ry., Savannah, Ga., died at Timagami, Ont., towards the end of August, aged 53. His entire railway service from 1880 to the time of his death was with that company, and he passed through all the grades from clerk and agent upward.

**Acton Burrows**, Managing Director and Editor in Chief, Canadian Railway and Marine World, has been re-elected a mem-

**A. A. Tisdale**, Superintendent, Regina Division, Grand Trunk Pacific Railway.

ber of the Canadian Press Association's Postal and Parliamentary Committee, and has also been elected Chairman of the Association's Trade and Class Paper Section and a member of the Association's Board of Directors.

**W. H. Stennett**, Auditor of Expenditures, Chicago and North Western Ry., who died at Oak Park, Ill., recently, was born in Ontario in 1832, and went to the U. S. at the age of 17. He entered railway service in 1867 with the Illinois Central Rd., transferring to Chicago and North Western Ry. service in 1873, and remaining with that company to the time of his death.

**William F. Fitch**, who died at Marquette, Mich., recently, was born at Circleville, Ohio, June 28, 1839, and entered railway service, Oct. 14, 1851, as clerk in the General Manager's office, Chicago and North Western Ry. He rapidly rose to the higher positions, and in 1866 was appointed General Manager of the Fremont, Elkhorn and

Missouri Valley Rd. and Sioux City and Pacific Rd. In 1888 he was appointed Vice President and General Manager, Duluth, South Shore and Atlantic Ry., and in 1902 he was appointed President, retiring in 1911.

**John Andrew Humble**, who has been appointed Claims Agent, Canadian Government Railways, Moncton, N.B., was born at Stanley, N.B., Dec. 12, 1856, and during 1912 was material clerk for the Fredericton and Grand Lake Coal and Ry. Co., Fredericton, N.B. In 1913, he was arbitrator for the St. John and Quebec Ry. Co., Fredericton, N.B.

**H. A. Robson**, Commissioner of Public Utilities for Manitoba, who has acted in that capacity since the inauguration of the Commission in 1912, was reported by Winnipeg papers to have resigned, Sept. 2. We were officially advised, Sept. 22, that the newspaper reports were unwarranted, that there was no change in the personnel of the Commission, and that until official announcement was made (should any change occur) it was not safe to speculate. This official statement, of course, does not necessarily imply that a change is not imminent.

**Arsene Babin**, who has been appointed Resident Engineer, Maintenance of Way, National Transcontinental Ry., Quebec, Que., was born there, Sept. 8, 1881, and entered N.T.R. service in May, 1904, since when he has been, to June, 1906, topographer, leveller, transit man on preliminary survey and location, La Tuque, Que.; June, 1906, to Nov., 1914, Resident Engineer on Construction, St. Basile and Portneuf, Que. He graduated with the degree of B.A., from the College of Ste. Anne de la Pocatiere, in 1900, and with the degree of B.Sc. from Laval University, Que., in 1904.

**Bliss A. Bourgeois**, whose appointment as Assistant to the Comptroller and Treasurer, Canadian Government Railways, Moncton, N. B., was announced in our last issue, was born at Moncton, N. B., May 24, 1869, and entered Canadian Government Railways service, Nov. 17, 1887, since when he has been, to June 1890, clerk in General Superintendent's office, Moncton, N. B.; June 1890 to Nov. 1894, secretary to Treasurer, Moncton, N. B.; Nov. 1894 to Mar. 1907, bookkeeper, Treasurer's Department, Moncton, N. B.; Mar. 1907 to May 1915, chief clerk, Accounting Department, Moncton, N. B.

**Clayton H. Lundgren**, who has been appointed General Yardmaster, National Transcontinental Ry., Fort William, Ont., was born at Northfield, Minn., Dec. 22, 1877, and entered railway service in April 1895, since when he has been, to Oct. 1900, in the Mechanical Department, Minneapolis, St. Paul and Sault Ste. Marie Ry., Glenwood, Minn.; Oct. 1900 to Sept. 1909, freight and passenger conductor, same road, Minneapolis, Minn.; 1909 to 1911, in private business at Glenwood, Minn.; 1911 to 1912, in train service, G. T. Pacific Ry., Graham, Ont.; 1912 to 1913, Assistant Yardmaster, Canadian Northern Ry., Port Arthur, Ont.; 1913 to Aug. 1915, Assistant Yardmaster, G. T. Pacific Ry., Mission Yard, Fort William, Ont.

**Arthur A. Tisdale**, whose appointment as Superintendent, Regina Division, Grand Trunk Pacific Ry., Regina, Sask., was announced in our last issue, and whose portrait appears in this issue, was born at Mount Vernon, Ont., Mar. 8, 1874, and entered railway service Sept. 18, 1889, since when he has been, to July 1892, in local freight office, G. T. R., Hamilton, Ont.; July

1892 to May 1899, secretary to Chief Engineer G. T. R. Hamilton and Montreal; May 1899 to Oct. 1907, successively, secretary, chief clerk, and Assistant to Fourth Vice President in Charge of Transportation and Maintenance of Way, G. T. R., Montreal; Oct. 1907 to Oct. 1909, Assistant to Vice President and General Manager, G. T. Pacific Ry., Montreal; Oct. 1909 to June 1915, Superintendent Lake Superior Division, G. T. Pacific Ry., Fort William, Ont.

**E. Eley**, who has been appointed Master Car Builder, Eastern Lines, C. P. R., Montreal, was born in London, England in 1867, commenced railway service with the Great Northern Ry., at King's Cross, London in June 1888 and came to Canada in 1889. He entered C. P. R. service in the Bridge and Building Department, Mar. 1894, and was transferred to the Car Department at North Bay, Ont., Aug. 1894, and was, from Mar. 1902 to Jan. 1903, charge hand at Chapleau, Ont.; Jan. 1903 to July 1906, leading hand at North Bay, Ont.; July 1906 to Feb. 1907, Car Foreman, Quebec, Que.; Feb. 1907 to May 1911, Car Foreman, Glen Yard, Montreal; May 1911 to Apr. 1912, General Foreman, passenger car repair shops, West Toronto, Ont.; Apr. 1912 to Sept. 7, 1915, Divisional Car Foreman, Lake Superior Division, North Bay, Ont.

**A. P. Linnell**, Chief Assistant to A. B. Smith, Manager of Telegraphs, Grand Trunk and Grand Trunk Pacific Railways, Montreal, has been granted extended leave of absence, due to his having enlisted in the 3rd. Universities Company (reinforcements Princess Patricia Light Infantry) Canadian Expeditionary Force, and has sailed for England preparatory to going to the front. He was for some years secretary to the Commercial & Traffic Superintendent, Grand Trunk Pacific Telegraph Co., Winnipeg; subsequently, in order to gain additional experience, he transferred to the construction side of the telegraph business as an ordinary groundman, reaching ultimately the position of foreman in charge of one of the telegraph outfits building lines through the Rocky Mountains. In Jan. 1913 he was transferred to Montreal and given the position he has just temporarily vacated. On leaving Montreal recently he was presented with a wrist watch by his staff.

**W. M. Kirkpatrick**, Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Montreal, has been appointed an officer in the 87th Overseas Battalion, Canadian Grenadier Guards, which has its headquarters in Montreal, and will leave shortly for active service. He is a son of the late Sir of the C.P.R., and was born at Kingston, Ont., Oct. 8, 1874. He entered C.P.R. service Mar. 7, 1892, in the Vice President's office, and up to July, 1899, filled various positions in the Chief Engineer's office, Foreign Freight Department, Montreal, and General Freight Agent's office, Toronto; July, 1899, to Dec., 1902, clerk in Fourth Vice President's office, Montreal; Dec., 1902, to Apr., 1905, Assistant General Freight Agent, Pacific Division, Vancouver, B.C.; Apr., 1905, to Feb., 1907, Export Freight Agent, Montreal; Feb. to Dec., 1907, General Freight Agent, Atlantic Division, St. John, N.B.; Dec., 1907, to Apr., 1911, General Freight Agent, Through Traffic, Ontario Division, Toronto; Apr. to Aug. 21, 1911, General Freight Agent, Eastern Lines, Montreal, at which latter date he was appointed Assistant Freight Traffic Manager, Eastern Lines.

**P. J. Flynn**, who has been appointed Superintendent, Districts 2 and 3, Central Division, Canadian Northern Ry., Winnipeg, was born at Fishers, N. Y., Nov. 22, 1872, and entered railway service, Apr. 1, 1888, since

when he has been, to Aug. 1, 1891, yard clerk, Lehigh Valley Rd., Buffalo, N. Y.; Aug. 1, 1891 to Apr. 1, 1892, night yardmaster, same road, Buffalo, N. Y.; Apr. 1, 1892 to Jan. 24, 1894, Yardmaster, Tift Farm, Yards, same road, Buffalo, N. Y.; Jan. 24, 1894 to Nov. 1, 1898, General Yardmaster, same road, Manchester, N. Y.; Nov. 1, 1898 to Apr. 1, 1901, Assistant Trainmaster, Pennsylvania Division, same road; Apr. 1, 1901 to Feb. 1, 1905, General Yardmaster, same road, Sayre, Pa.; Feb. 1, to Aug. 1, 1905, General Yardmaster, New York, New Haven and Hartford Rd., Worcester, Mass.; Aug. 1, 1905 to Feb. 1, 1907, General Yardmaster in charge of Terminals, same road, Providence, R. I.; Feb. 1, 1907 to Oct. 1, 1908, General Yardmaster in charge of Terminals, Lehigh Valley Rd., Buffalo, N. Y.; Oct. 1, 1908 to Jan. 1, 1913, Trainmaster, same road, Buffalo, N. Y.; Jan. 1, 1913 to Aug. 1915, Terminals Manager, Winnipeg Joint Terminals, Canadian Northern Ry., G. T. Pacific Ry. and National Transcontinental Ry., Winnipeg.

*P. 194*  
The Late F. M. Spaidal.  
General Superintendent, Quebec Grand Division.  
Canadian Northern Railway.

**F. M. Spaidal**, General Superintendent, Quebec Grand Division, Canadian Northern Ry., Montreal, died there, Sept. 2, after a prolonged illness. He was born at Gananoque, Ont., Nov. 13, 1858, and entered railway service in 1876, since when he was, to June 1883, operator, agent and dispatcher, G. T. R. at various points between Montreal and Kingston, Ont.; June 1883 to June 1885, agent and dispatcher, Union Pacific Rd., Butte, Mont., and other points; Aug. to Dec. 1885, operator, C. P. R., Ottawa, Ont.; Dec. 1885 to June 1893, dispatcher, C. P. R., Ottawa, Ont.; June 1893 to Sept. 1897, Chief Dispatcher, C. P. R., Ottawa, Ont.; Sept. 1897 to Oct. 1903, Trainmaster, C. P. R., Ottawa, Ont.; Oct. 1903 to Aug. 1906, Superintendent, District 2, Eastern Division and Montreal Terminals, C. P. R., Montreal; Aug. 1906 to Dec. 1907, Superintendent, Canadian Northern Ontario Ry., Toronto; Dec. 1907 he was appointed General Superintendent, Canadian Northern Quebec Ry., Montreal, and in Mar. 1908, he was also appointed General Superintendent, Quebec and

Lake St. John Ry., and his office moved to Quebec, Que. In 1913 he was appointed General Manager, C. N. Q. R. and Q. & L. St. J. R., and his office moved to Montreal, and in July 1914, on fuller organization of the Canadian Northern Ry., he was appointed General Superintendent, Quebec Grand Division, C. N. R., with office at Montreal. The funeral took place at Brockville, Ont.

**R. E. Larmour**, who has been appointed General Agent, Freight Department, C.P.R., New York, was born at Brantford, Ont., Sept. 26, 1868, and entered railway service Aug., 1884, at Stratford, Ont., as office boy in the office of his father, who was then Division Superintendent, G.T.R., remaining there until 1886; since when his record has been: 1886 to 1888, clerk in the office of General Manager, Great Eastern Fast Freight Line, Detroit, Mich.; 1888 to 1890, Accountant to General Superintendent, Chicago and Grand Trunk Rd., Detroit, Mich.; 1890 to 1892, Local Freight Department, G.T.R., Detroit, Mich.; 1892 to 1898, Transfer Clerk, Through Freight from Wabash Rd. to G.T.R., at Windsor, Ont. He entered C.P.R. service in 1898, and has been, to Nov., 1899, chief clerk Freight Department, Fort William, Ont.; Nov., 1899, to May, 1900, acting agent, Fort William; May, 1900, to Aug., 1900, chief clerk, Superintendent's Office, Fort William; Aug., 1900, to Feb., 1903, agent, Port Arthur, Ont.; Feb., 1903, to Feb., 1905, Freight Claims Agent, Pacific Division, Vancouver, B.C.; Feb., 1905, to Feb., 1906, Freight Claims Agent, Central and Western Divisions, Winnipeg; Feb. to Aug., 1906, City Freight Agent, Winnipeg; Aug., 1906, to June, 1908, Freight Agent, Fort William, Ont.; June to July, 1908, General Agent, Fort William, Ont.; July, 1908, to June, 1909, General Freight Agent, Kootenay and Boundary District, Nelson, B.C.; June, 1909, to Apr., 1911, General Freight Agent, Central Division, Winnipeg; Apr. to June, 1911, Division Freight Agent, Manitoba Division, Winnipeg; June, 1911, to July, 1914, Division Freight Agent, British Columbia Division, Vancouver; July, 1914, to Sept. 30, 1915, Assistant General Freight Agent, Vancouver, B.C.

#### Canadian Northern Ry. Through Service.

—The C.N.R. will probably start a freight service on its main line north of Lake Superior and also on the western portion of the line through British Columbia during October, thus giving through service between Toronto and the Pacific coast. The company's present construction terminus in B.C. is at Port Mann, on the north side of the Fraser River, four miles from New Westminster Bridge, but it has bought the Great Northern Ry.'s Port Kells branch over which it will run from Port Kells, 10.7 miles from New Westminster Bridge, to New Westminster and thence over the Great Northern track into Vancouver. It is probable that a through passenger service will be established in November.

**Railway Construction Laborers for the Front.**—A press report from Vancouver, B.C., states that Lt.-Col. A. E. Hodgins, who was formerly a Division Engineer on construction, National Transcontinental Ry., at Kenora, Ont., has been selected by the Government to superintend the recruiting of 1,100 specially selected men from railway construction camps and men who have had experience in railway construction and general mechanical work in the western provinces. It is stated that they will be utilized in Europe for trench work, road building and railway construction.

**The Dominion Bridge Co.** has opened an office in London, England, at 15 Dartmouth St., Westminster, S. W., with J. E. Bell as London Representative.

## Steel Frame Box Cars for the Russian Government.

The Russian Government has placed orders recently for a large number of freight cars to be delivered on short notice. These include 2,000 steel framed, inside sheathed 40 tons capacity box cars for grain and general service, now being delivered by the Eastern Car Company, New Glasgow, N. S. As will be noted from the accompanying illustrations the type of construction embodies a design of outside metal roof with runningboard and handrail attachments to suit European practice. Insulation is obtained by the use of a layer of matched boards, placed longitudinally and secured to furrings which are bolted on top of pressed steel carlines, which in turn are riveted to the side plate Z-bar. The roof sheets are applied in 20 sections per car of no. 24 galvanized steel having standing seams.

A structural steel side framing is employed. The side posts and diagonal braces, with the exception of the inner diagonal brace at bolster, which is formed from a 3-in Z-bar @ 8.4 lb. per ft., are all 3-in. Z-bars @ 6.7 lb. per ft. Side post and brace top connections to 4-in. Z-bar @ 8.2 lb. side plate are made with pressed steel connection plates. The 7 x 3½ x 7-16-in. rolled steel angle iron side sill is so located as to admit of the side posts and braces being riveted directly to same with three rivets at each crossing. The side and end lining is formed from 1¼ x 5¼ in. tongued and grooved boards, secured to each post by eight and to each brace by six button head bolts with nuts placed outside, so as to give a smooth interior. The top flange of the side plate Z-bar forms a sealed joint with the lining and at the bottom, the lining is extended to the lower edge of the flooring. A 2½ x 2 x 3-16-in. corner angle secured to the bottom board of the lining with button head bolts and having the wide flange resting on the top of the floor forms a grain tight joint all around the base of the car. The side doors are 6-ft. 5½-in. wide formed with a frame 2¼-in. thick, having two centre rails reinforced by ½-in. pressed steel brace. The corners of the door are

thick is secured over the flooring at the door opening. The flooring is formed by tongued and grooved boards 1¾-in. thick, bolted to the underframe members.

Pressed steel corner posts ¼-in. thick are provided in conjunction with 3-in. Z-bars @ 6.7 lb. for centre end posts and diagonal braces. The usual type of brake mast application, as used for cars operating on this continent, is followed, and a pressed steel platform and brace is included.

Hook type, drop forged couplings are used in conjunction with springs and cast follower cups, the stem of the coupling is extended and threaded, so as to accommodate one hexagon nut and a flat split key placed immediately behind the rear follower. The European type of disc buffer, 17 23-32-in. diameter, is used, same being bolted directly to the end sill.

The design of the underframe presents an unusual procedure, in that truss rods 2-in. in diameter, located 13¾-in. off centre, are employed in conjunction with an all metal underframe and steel side frame. The centre sills are 10-in. @ 21.8 lb. per foot rolled steel channels, placed 12¾-in. apart back to back, a full length top cover plate 20-in. by ¾-in. is provided, also a 4 x 3½ x ½-in. x 33¼ ft. rolled steel angle is riveted to the lower portion of the web of each centre sill. Bolsters are formed with 16 x ¾-in. cover plates, the top one only extending from side sill to side sill, the lower one just includes side bearing, all secured to pressed steel diaphragms flanged all around. Cast centre plate fillers between centre sills form a tie between the two bolster diaphragms. Two crossbearers placed 12¼ ft. apart centre to centre, provided with same design of diaphragms as bolster, and top and bottom cover plates 6 x ¾-in., form support for truss rod struts, which are 23¼-in. deep. Floor supports of pressed steel 4¼-in. deep are located as follows: one between bolster and crossbearer and one between crossbearers at centre of car. Longitudinal floor stringers of 3-in. Z-bars @ 6.7 lb. per ft. run full length of car, located 3 ft. 1 in. each side from centre of car. Press-

steel piping. All safety appliances are arranged to come within the clearance gauge of the German and Austrian Railways.

An arch-bar type of truck is employed in conjunction with axles having journals for 100,000 lbs. capacity cars, in spite of the fact that the cars are only built for 80,000 lbs. loading. The side frames are formed by top and bottom bars 5 x 1¼-in. steel and

End View of Steel Frame Box Car for Russian Government.

tie bar 5 x ⅝-in. steel. Centre plates are of malleable iron, body section bolted, truck section riveted to truck bolster, latter being formed by two 10-in. I-beams @ 25 lb. per ft. and fitted with 13-in. x ¾-in. top and bottom cover plates. Roller type side bearings located 2½ ft. off centre and arranged for ¾-in. clearance, are employed in con-

Steel Frame Box Car for Russian Government.

strengthened by angle plates; the top and bottom combination guide and stiffener strips, which are Z-shaped, are bolted to the door frame and engage three malleable iron bottom guides when the door is closed. Door hangers operate on an enclosed track as shown by the illustration. Grain doors of the removable type are provided and the usual type of steel threshold plate ¼-in.

ed steel diagonal braces, transmitting thrust from end sill buffer to centre sill are formed, so as to tie the bottom and centre sill construction together, as well as giving stiffness to the pressed steel end sill, which has a flange 12-in. wide lapping over the centre and side sill construction.

The ladder stiles are formed from angles with round iron treads; hand rails are of

junction with four-cluster type bolster springs located 6 ft. 8 5-32-in. centre to centre. Offset style of brake rigging is arranged to provide a distance of 15-in. from rail to centre of brake head. Column castings are designed with brake hanger lugs cast integral. Clearance between top of bolster and underside of top arch bar is maintained at ¾-in. centre pins, 2-in.

diameter, and fitted with top and bottom keys with cover provided inside of car to admit of their removal. Spring planks are formed from 13-in. channels @ 32 lb. per ft.

The following are the general dimensions:

Gauge	5 ft.
Length over buffers (free)	46 ft. 10 $\frac{1}{2}$ in.
Length over pulling face of couplers	44 ft. 5 $\frac{1}{2}$ in.
Length over end sills	42 ft. 11 $\frac{1}{2}$ in.
Width over side sills	9 ft. 1 in.
Width over side plates	9 ft. 1 $\frac{1}{2}$ in.
Width inside	8 ft. 10 in.
Width of door opening	6 ft.
Height top of rail to top of side plates	11 ft. 6 $\frac{1}{2}$ in.
Height top of rail to top of floor	4 ft. $\frac{7}{8}$ in.
Height top of rail to bearing face of centre plate	2 ft. 8 $\frac{3}{4}$ in.
Height top of rail over runningboard	12 ft. 10 $\frac{3}{8}$ in.
Height top of rail over runningboard hand	

Height top of rail over brake mast	15 ft. 3 in.
Height top of rail to centre of buffer	3 ft. 5 $\frac{1}{4}$ in.
Height inside at centre (clear)	8 ft. 2 in.
Height of side door opening	7 ft. 1 $\frac{3}{4}$ in.
Centre to centre of lamp brackets	10 ft. 2 1-16 in.
Centre to centre of trucks	30 ft. 9 in.
Centre to centre of buffers	5 ft. 10 $\frac{1}{2}$ in.
Truck wheelbase	6 ft. 3 in.
Total wheelbase of car	37 ft.
Capacity of car	80,000 lbs.
Capacity of axles (each)	38,000 lb. (Size of journal 5 $\frac{1}{2}$ in. by 10 in. M.C.B. std.)
Diameter of wheels	31 $\frac{3}{8}$ in. (M.C.B. std. cast iron chilled tread and flange).
Weight of wheels (each)	1,025 lb.

The cars are being shipped knocked down, the underframe all in one piece, with floor laid, and are routed via the Panama Canal to Vladivostok, where they will be assembled. The first vessel with 175 cars left Sept. 7.

conditions the manners of the old world that so well became him, and to the end of his long career retained the respect and honor of all. In the social directions in which he was interested, apart from his business affairs, he assumed with the quiet modesty which distinguished him, a role that gave those movements a stability and an influence which they would not otherwise have possessed."

### Location of Emergency Valve on Passenger Cars.

G. Spencer, Chief Operating Officer, Board of Railway Commissioners, sent the following memorandum to the Secretary of the Board, Sept. 15:—

Re Mr. Barry's letter of May 5 bringing up the question of having the conductor's valve or emergency valve placed in a prominent position and stencilled or otherwise indicated, so that in the event of an accident or emergency case cropping up any person in the car might operate the valve and stop the train. This case was considered and heard at Ottawa, Jan. 7, 1913. At that time no action was considered necessary. The different companies were to send in plans, specifications and data. These we have on file. In addition, I have had investigations made and find that the number of valves, their location, and the cord attachments are by no means standard. A great many of the valves have no cord attachments and the handles for operating them do not all work the same way.

The Master Car Builders' Association meeting at Chicago, in May of this year, recommended that

"All passenger equipment cars to be fitted with one or more conductors' valves. If one valve is used it is to be connected with a cord running the full length of the car. If the construction of the car does not permit the use of a cord running the full length, two valves should be used, one located at each end of the car, with a cord as long as practical."

After discussing the matter thoroughly with the different members of the staff in this department, I am of the opinion that it is very desirable in the interests of safety that the position of these valves be standardized, and that the cord or handle in the body of the car or compartment occupied by passengers be so placed and stencilled so that it will be understood what its functions are. These valves should be placed at the end of the car and outside of it, with a handle which trainmen can use in case of necessity and a cord attachment running to the inside of the car, as stated above. On cars with vestibules, the valves should be placed at the end of the vestibule over the doorway, and non vestibule cars on the end of the car (bulkhead) handle outside, and in both cases handle to operate so that it would open by being pulled up rather than pulled down, the cord from this valve handle to go through to the body of the car in all cases, and the handle on the cord in the body of the car to be stencilled "Emergency Valve."

On Sept. 18 the Secretary of the Board transmitted a copy of the memo to railway companies, and asked them to submit comments on it within 30 days.

**Railway Extensions in South Africa.**—The Union Government of South Africa has completed railway connections with the lines connecting with Walfisch Bay, in the country formerly known as German Southwest Africa, but which has been absorbed into the Union, and has established the Government gauge throughout. The change on the last section of 32 miles was completed in 50 hours, thus constituting a South African record.

## Death of Harry Braithwaite Abbott at Vancouver.

Harry Braithwaite Abbott, M. Can. Soc. C.E., who died at Vancouver, B.C., Sept. 14, of pneumonia after only a few days illness, was the son of the late Rev. Joseph Abbott, first Anglican incumbent of St. Andrews, Argenteuil, Que., by his wife Harriet Elizabeth, daughter of the Rev. Richard Bradford, first rector of Chatham, Que. He was born at Abbotsford, Que., June 14, 1829, educated at the High School, Montreal, and at McGill University, and commenced his professional career on the engineering staff of the St. Lawrence and Atlantic Ry., now part of the Grand Trunk. On the completion of the line he was appointed resident engineer of one of the divisions. This position he resigned in 1857, to take the contract with the late C. Freer, on the Grand Trunk. Later he and Mr. Freer leased the Riviere du Loup section of the Grand Trunk, which they opened up and operated for a year. They also operated the Carillon and Grenville Ry. until its purchase by the Ottawa River Navigation Co. In 1864 Mr. Abbott assumed the control of the Brockville and Ottawa Ry., filling the position of Chief Engineer, and in 1872 he built the Carleton Place and Ottawa branch of the Canada Central Ry. He was for some time President and Managing Director of the former road, and Managing Director of the latter. In 1876 he organized the Eastern Extension Ry. Co., and was appointed Chief Engineer and Manager of Construction. His connection with the Canadian Pacific Ry. dated from 1882, when he was appointed Manager of construction of the Sault Ste. Marie Branch. After completing this work he was appointed Manager of Construction of the main line west from Sudbury. He was in charge of this division at the outbreak of the rebellion in the Northwest Territories, and the arrangements for the conveyance of the troops sent from the east for its suppression were carried out by him. After having served as Supervising Engineer, he was appointed in 1886 as the first General Superintendent of the C.P.R. in British Columbia, from which position he retired, March, 1897, when he was offered, but declined, an advisory position. He was admitted as a member of the Canadian Society of Civil Engineers in 1887, and served as a member of its council. During the Trent affair, he assisted in raising the 11th Battalion V.M. Argenteuil Rangers, and served under the command of his brother, the late Sir J. J. C. Abbott (afterwards Premier of Canada), for a considerable period, finally retiring with the rank of Major. He unsuccessfully contested Brockville in the Conservative interest at the Dominion general election in 1872, and East Algoma for the Ontario Legislature in 1886. He was a member of the Church of England. He married Margaret Amelia, daughter of the late

Mr. Justice Sicotte, and widow of C. Freer, who predeceased him by a number of years.

Mr. Abbott was one of the earliest residents of Vancouver, and as the chief C.P.R.

Harry Braithwaite Abbott, M. Can. Soc. C.E.

official there for a number of years occupied a leading position in its public and social life. He was Honorary Life President of the Vancouver Club and a member of many other local organizations. Besides being an expert rifle shot and billiard player, he was an enthusiastic fisherman, and keenly enjoyed golf. Only a week before his death, notwithstanding his 87 years of age, he attended a recruiting meeting.

The Vancouver Province says of him: "Mr. Abbott saw the townsite which he laid out grow into importance and go through those periods of sensation which may be compared to the maladies and slight fevers of childhood. He saw it grow into a city that attracted visitors and residents from all over the world, and in those days he occupied a position of leadership and much influence. Always a worker rather than a talker, he never joined the ranks of the loquacious, and he certainly never played to the gallery. He lived his life as a quiet Canadian citizen, who retained in the midst of the necessary rawness of western

# Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, Telegraph, and Railway and  
Canal Contractors' Interests.  
Official Organ of the various Canadian  
Transportation Associations.  
Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors,  
70 Bond Street, Toronto, Canada.

ACTON BURROWS, A. Can. Soc. C.E.,  
Managing Director and Editor-in-Chief.  
AUBREY ACTON BURROWS - Secretary and  
Business Manager.

Associate Editor - - - DONALD F. KEIR  
Mechanical Editor - - - FREDERICK H. MOODY, B.A.Sc.

Canadian Business Representative - W. H. HEWITT  
70 Bond Street, Toronto

United States Business Representative, A. FENTON WALKER  
143 Liberty Street, New York, N.Y.

European Business Representative - J. MEREDITH MCKIM  
18 Regent St., London, S.W., Eng.

Authorized by the Postmaster General for  
Canada, for transmission as second class mat-  
ter.

Entered as second class matter, July 25, 1913,  
at the Postoffice at Buffalo, N.Y., under the  
Act of Congress of March 3, 1879.

SUBSCRIPTION PRICE, including postage  
anywhere, \$2 a year.

SINGLE COPIES, 20 cents each, including  
postage.

The best and safest way to remit is by express  
money order. Where one cannot be obtained, a  
post office money order, or bank draft, payable  
at par in Toronto, may be sent. Cheques or  
drafts not payable at par in Toronto cannot be  
accepted. Remittances should be made payable  
to Canadian Railway and Marine World.

## Progress of Rogers Pass Tunnel Con- struction, Canadian Pacific Railway.

The following table, for which we are in-  
debted to J. G. Sullivan, Chief Engineer,  
C.P.R., Winnipeg, shows the progress made  
from July 29 to Sept. 2, also the total pro-  
gress to Sept. 2. The figures give the num-  
ber of feet:

Main heading .....	1,400		8,869
Main tunnel .....	951		4,705

## Sir William Van Horne's Appreciation of Canadian Railway and Marine World.

Before starting the publication of the  
Railway and Shipping World (now Cana-  
dian Railway and Marine World) in 1898,  
its founder consulted several of the prin-  
cipal Canadian railway officials, among them  
Sir William Van Horne, who, while sympa-  
thetically friendly to the project, doubted  
whether it could be made a financial suc-  
cess. But from the issue of its first num-  
ber he evinced a keen interest in it, received  
it regularly, and took many occasions to  
recommend it. Only last year he wrote our  
Managing Director as follows:

"Montreal, Jan. 31, 1914.

"My dear Burrows,—I have just now been  
looking over the last number of your Cana-  
dian Railway and Marine World, and I am  
more than ever struck by the extraordinary  
amount and the high character of the in-  
formation it contains, which puts it on a  
par with or even beyond any railway jour-  
nal I know.

"I remember the doubts I expressed to  
you at the time you started it, and I feel  
bound to confess the extent of my mistake,  
and to congratulate you warmly on your  
splendid success.

"Sincerely yours,

W. C. VAN HORNE."

"P.S.—I am still confined to my room, but  
am beginning to hobble about on crutches.  
I have just found the photograph you ask  
for and send it herewith."

[The photograph referred to is the one  
reproduced on the first page of this issue.—  
EDITOR.]

The International Engineering Congress,  
which concluded its sittings at San Fran-  
cisco, Cal., Sept. 25, arranged for a series  
of excursions to be held subsequently so  
that the members could return to their  
homes by a number of routes. One of these  
trips was arranged from San Francisco,  
via Portland, Ore., to Seattle, Wash.,  
thence by steamship to Victoria and Van-  
couver, and by special train on the C.P.R.  
and its Minneapolis, St. Paul and Sault Ste.  
Marie Ry. and other connections to New  
York. The special train was timed to leave  
Vancouver Sept. 30, and it was expected to  
reach Chicago about Oct. 7.

The G. T. R. Stratford Division Patriotic  
Association, Palmerston Branch, has been  
formed to raise funds among the company's  
local employes, for patriotic purposes, by  
means of monthly contributions. C. For-  
rester, Superintendent, Stratford Division,  
Ontario Lines, G. T. R., has been elected  
President.

Dominion Government Elevators.—The  
completion of the Government elevator at  
Calgary, Alta., makes a chain of Govern-  
ment elevators from Calgary to the head of  
the lakes. The capacity of this elevator is  
about 2,500,000 bush.

## Putting Municipal and Private Utilities on a Par.

New evidence of the spreading tendency  
in the United States to subject all munici-  
pally owned utilities, like electricity and gas  
works, street railways, etc., to the same  
standards of operation and finance that are  
applied to public service companies under  
private ownership is seen in a recent de-  
cision of the California Railroad Commis-  
sion. The City and County of San Fran-  
cisco applied for permission to carry the  
Municipal Ry. tracks on Potrero Ave. at  
grade across two main tracks and a siding  
of the Southern Pacific Co. It further asked  
that the expense of maintaining the  
main line crossing be ordered divided be-  
tween the municipality and the railway and  
that the spur crossing be maintained by the  
railway. Special privilege was claimed by  
virtue of being a municipal corporation. In-  
vestigation showed that the railway had a  
franchise from the city permitting it to  
cross Potrero Ave., with its two main  
tracks, but that the siding existed only on  
sufferance. Permission was granted the  
city to make the crossing, but the entire ex-  
pense of construction and maintenance was  
imposed on the Municipal Ry., under the  
usual rule of imposing the burden of a grade  
crossing on the junior company. Municipal  
privilege was specifically denied, and cer-  
tain similar cases in Los Angeles were  
cited as precedent.

## The Ownership of a B. C. Logging Railway.

The question of the ownership of a log-  
ging railway from Powell Lake to the  
seacoast in British Columbia came before  
a court at Vancouver, Sept. 2, upon an ap-  
plication of the Powell River Co. for an in-  
junction to restrain the Jordan River  
Lumber Co., Elder Bros., and other lumber  
operators from using this railway. The  
plaintiff company owns the townsite of  
Powell River, which is crossed by the rail-  
way which runs from Powell Lake to Mal-  
aspina Strait. The Canadian-Puget Sound  
Co. had a 10 year contract for the use of the  
railway, and the plaintiffs desire that the  
defendant companies be enjoined from using  
the line. Counsel for Elder Bros., contended  
that the plaintiffs were putting quite a  
wrong interpretation upon the facts, as the  
line which was the property of the Canadian-  
Puget Sound Lumber Co., had been trans-  
ferred to his clients. Elder Bros. had been  
using the line since May, and were shipping  
150,000 ft. of logs daily over it. The hearing  
was adjourned.

Railway Lands Patented.—Letters patent  
were issued during August, for Dominion  
railway lands in Manitoba, Saskatchewan,  
Alberta and British Columbia, as follows,—

	Acres.
Calgary and Edmonton Ry. ....	319.00
Canadian Northern Ry. ....	643.00
Canadian Pacific Ry. ....	6.85
Edmonton, Dunvegan and British Col- umbia Ry. ....	36.10
Grand Trunk Pacific Branch Lines Co. ...	6.16
Qu'Appelle, Long Lake and Saskatch- ewan Rd. and Steamboat Co. ....	2,880.00

Total ..... 3,891.11

Railway Route Map Approved.—The Min-  
ister of Railways and Canals approved, on  
Sept. 1, the general location of a branch  
line of the Edmonton, Dunvegan and British  
Columbia Ry., from Spirit River Settlement,  
near Dunvegan, southerly to Grand Prairie  
Settlement, about 50 miles.

The G. T. R. Barrie Division Railwaymen's  
Association is making its first contribution  
of a fully equipped motor ambulance for  
European service, and is co-operating with  
the Red Cross Society in field comfort work.

# Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**Canadian Government Railways.**—J. A. HUMBLE has been appointed Claims Agent for the territory from Moncton to Campbellton and subdivisions (Intercolonial Ry.), Campbellton to St. Leonards (International Ry. of N. B.), Centreville to Gagetown (St. John & Quebec Ry.), and Moncton to Edmundston (National Transcontinental Ry.). Office, Moncton, N. B.

W. D. STEWART, heretofore foreman of erecting shop, Intercolonial Ry., Moncton, N. B., has been appointed Assistant to the General Storekeeper, with office for the present at Transcona, Man.

See also Intercolonial Ry. and National Transcontinental Ry.

**Canadian Northern Ry.**—The Quebec Grand Division and the Ontario Grand Division have been renamed Quebec Lines and Ontario Lines respectively.

W. A. KINGSLAND, heretofore Local Auditor, Quebec Lines, Quebec, Que., has been appointed General Superintendent, Quebec Lines, vice F. M. Spaidal, deceased. Office, Montreal.

JAMES ORR, heretofore in the General Traffic Manager's office, Toronto, has been appointed Assistant to the General Traffic Manager, there.

S. J. HUNGERFORD, Superintendent of Rolling Stock, has had his office moved from Winnipeg to Toronto, his jurisdiction having been extended over the whole system, as announced in a previous issue.

A. L. GRABURN, heretofore Mechanical Engineer, Toronto, has been appointed Assistant Superintendent of Rolling Stock. Office, Toronto.

Canadian Railway and Marine World for September contained particulars of the subdivision of the Ontario Grand Division into the Toronto District and the Lake Superior District and gave a complete list of the operating and maintenance officials thereon. Following are additional particulars in regard to the officials and their previous positions:

J. IRWIN, heretofore Superintendent, District 1, Western Division, Dauphin, Man., has been appointed Superintendent, Toronto District, Ontario Division. Office, Rosedale, Toronto.

G. COLLINS, heretofore Superintendent, Ottawa Division, Trenton, Ont., has been appointed Superintendent, Branch Lines, Toronto District, with jurisdiction over Picton, Maynooth, Tweed, Irondale and Kingston Subdivisions, reporting to the Superintendent, Toronto District. Office, Trenton, Ont.

W. C. MOORE, heretofore Master Mechanic, Ottawa Division, Trenton, Ont., has been appointed Master Mechanic, Toronto District, reporting to the Superintendent. Office, Trenton, Ont.

O. OGDEN, heretofore Supervisor of Track, Ottawa, Ont., has been appointed Supervisor of Track, with jurisdiction over Rideau and Brockville Subdivisions, Toronto District. Office, Trenton, Ont.

J. McDONALD, heretofore Supervisor of Track, Central Ontario, Quinte and Kingston Districts, Trenton, Ont., has been appointed Supervisor of Track with jurisdiction over Maynooth, Picton, Irondale and Tweed Subdivisions, Toronto District. Office, Trenton, Ont.

W. R. KELLY, heretofore Assistant Superintendent, Ottawa Division, Trenton, Ont., has been appointed Assistant Superintendent, Toronto Division, with jurisdiction over the Parry Sound, Orillia, Toronto

Terminals, Trenton, Rideau and Brockville Subdivisions. Office, Rosedale, Toronto.

J. D. EVANS, heretofore Division Engineer, Ottawa Division, Trenton, Ont., has been appointed Supervisor of Bridges and Buildings, with jurisdiction over Maynooth, Picton, Irondale and Tweed Subdivisions, Toronto District. Office, Trenton, Ont.

P. H. FOX, heretofore Chief Dispatcher, Trenton, Ont., has been appointed Chief Dispatcher, Toronto District. Office, Rosedale, Toronto.

G. P. MacLAREN, heretofore Division Engineer, Mackenzie, Mann & Co., Ltd., North Bay, Ont., has been appointed Division Engineer, Toronto District, reporting to Superintendent. Office, Rosedale, Toronto.

E. MYERS, heretofore Roadmaster, Trenton, Ont., has been appointed Supervisor of Track, with jurisdiction over Toronto Terminals, Parry Sound and Trenton Subdivisions. Office, Rosedale, Toronto.

J. H. McALPINE, heretofore Locomotive

P. J. Flynn,  
Superintendent, Districts 2 and 3, Central Division, Canadian Northern Railway.

Foreman, Winnipeg, has been appointed Master Mechanic, Lake Superior District, reporting to the Superintendent. Office, Parry Sound, Ont.

A. J. GAYFER, heretofore Division Engineer, Mackenzie, Mann & Co., Ltd., Port Arthur, Ont., has been appointed Trainmaster, with jurisdiction over Ruel, Oba, Long Lake and Nipigon Subdivisions, Lake Superior District, and also Division Engineer, Lake Superior District. Office, Hornepayne, Ont.

W. M. JACKLIN, heretofore Inspector of Tracklaying on Construction, Port Arthur, Ont., has been appointed Supervisor of Roadway, including track, bridges and buildings, with jurisdiction over Nipigon and Long Lake Subdivisions, Lake Superior District. Office, Hornepayne, Ont.

W. J. CURLE, heretofore Superintendent, Toronto Division, Toronto, has been appointed Superintendent, Lake Superior District, except Nipigon Subdivision. Office, Capreol, Ont.

J. E. CATHER, heretofore Chief Dis-

patcher, Rosedale, Toronto, has been appointed Chief Dispatcher, Lake Superior District, except Nipigon Subdivision. Office, Capreol, Ont.

J. R. AUDET, heretofore with Foley Bros. and Northern Construction Co. on C. N. R. construction, has been appointed Supervisor of Roadway, including track, bridges and buildings, with jurisdiction over Ruel and Oba Subdivisions, Lake Superior District. Office, Capreol, Ont.

E. HAYSTEAD, heretofore Supervisor of Track, Parry Sound, Ont., has been appointed Supervisor of Track with jurisdiction over Sudbury and North Bay Subdivision, Lake Superior District. Office, Capreol, Ont.

F. McKAY, heretofore Supervisor of Bridges and Buildings, Toronto, has been appointed Supervisor of Bridges and Buildings, with jurisdiction over Sudbury and North Bay Subdivisions, Lake Superior District. Office, Capreol, Ont.

J. E. NELSON, heretofore Superintendent, District 1, Central Division, Port Arthur, Ont., has been appointed Superintendent, Nipigon Subdivision, Lake Superior District. Office, Port Arthur, Ont.

T. J. BROWN, heretofore Chief Dispatcher, District 1, Central Division, Port Arthur, Ont., has been appointed Chief Dispatcher, Nipigon Subdivision, Lake Superior District. Office, Port Arthur, Ont.

P. J. FLYNN, heretofore Manager, Fort Garry Union Terminals, Winnipeg, has been appointed Superintendent, Districts 2 and 3, Central Division, Canadian Northern Ry., vice M. B. Murphy, transferred to Western Division. Office, Winnipeg.

P. SPENCE, heretofore Locomotive Foreman, Saskatoon, Sask., has been appointed Locomotive Foreman, Winnipeg, Man., vice J. H. McAlpine, whose appointment as Master Mechanic, Parry Sound, Ont., was announced in our last issue.

A. H. EAGER, Superintendent of Shops, Winnipeg, has been appointed Assistant Superintendent of Rolling Stock. Office, Winnipeg.

A. McCOWAN, General Car Foreman, Winnipeg, has been appointed Supervisor of Car Work, there.

H. W. ANDREW, coach yard foreman, Winnipeg, has been appointed General Car Foreman there, vice A. McCowan, promoted.

J. E. JOHNSTON, night coach foreman, Winnipeg, has been appointed coach yard foreman there, vice H. W. Andrew, promoted.

J. A. DAWSON is reported to have been appointed assistant yard foreman, Winnipeg, vice J. E. Johnston, promoted.

E. H. DREW has been appointed Sleeping and Dining Car Inspector, Western Lines, Sleeping, Dining and Parlor Cars and News Departments.

I. L. BOOMER, heretofore Superintendent, District 4, Western Division, Calgary, Alta., has been appointed Superintendent, District 4, Central Division, vice W. E. Roberts, transferred to Western Division. Office, Brandon, Man.

W. E. ROBERTS, heretofore Superintendent, District 4, Central Division, Brandon, Man., has been appointed Superintendent, District 1, Western Division, vice J. Irwin, transferred to Ontario Lines. Office, Dauphin, Man.

C. E. LEPARD, heretofore in Locomotive Foreman's office, Regina, Sask., has been appointed Divisional Storekeeper, Regina, Sask., vice J. Butterfield, enlisted for active service.

A. T. HANNAH, heretofore Assistant Foreman, Saskatoon, Sask., has been appointed Locomotive Foreman, Humboldt,

Sask., vice W. B. Steeves, transferred to Saskatoon, Sask.

W. B. STEEVES, heretofore Locomotive Foreman, Humboldt, Sask., has been appointed Locomotive Foreman, Saskatoon, Sask., vice P. Spence, transferred to Winnipeg.

M. B. MURPHY, heretofore Superintendent, Districts 2 and 3, Central Division, Winnipeg, has been appointed Superintendent, District 4, Western Division, vice I. L. Boomer, transferred to Central Division. Office, Calgary, Alta.

**Canadian Pacific Railway.**—GORDON SPROULE has been appointed acting Engineer of Tests, vice E. B. Tilt, who has resigned from the service. Office, Montreal.

E. ELEY, heretofore Divisional Car Foreman, North Bay, Ont., has been appointed Master Car Builder, Eastern Lines, vice F. B. Zercher, who has left the service. Office, Montreal.

W. M. KIRKPATRICK, Assistant Freight Traffic Manager, Montreal, having been appointed an officer in the 87th Overseas Battalion, Canadian Grenadier Guards, the following four appointments have been made until he returns to the company's service:

H. E. MacDONELL, heretofore General Freight Agent, Eastern Division, Montreal, will perform the present duties of the Assistant Freight Traffic Manager. Office, Montreal.

E. N. TODD, heretofore Division Freight Agent, Eastern Division, Montreal, will perform the present duties of the General Freight Agent, Eastern Division, vice H. E. MacDonell. Office, Montreal.

A. O. SECORD, heretofore District Freight Agent, Ottawa, Ont., will perform the present duties of the Division Freight Agent, Eastern Division, vice E. N. Todd. Office, Montreal.

J. J. KELLY will perform the present duties of the District Freight Agent, Ottawa, Ont., vice A. O. Secord.

G. J. FOX, heretofore Yardmaster, Swift Current, Sask., has been appointed Yardmaster, Fort William, Ont.

F. PLAYER has been appointed station master, Moose Jaw, Sask., vice J. T. Turner, promoted.

J. T. TURNER, heretofore station master, Moose Jaw, Sask., has been appointed Yardmaster, Swift Current, Sask., vice G. J. Fox, transferred.

J. GRAHAM, heretofore Assistant Roadmaster, North Bend, B.C., has been appointed Roadmaster, Nelson, B. C.

J. A. MARTIN has been appointed Assistant Manager, Ocean Services. Office, Royal Liver Building, Liverpool, England.

R. E. LARMOUR, heretofore Assistant General Freight Agent, Vancouver, B. C., has been appointed General Agent, Freight Department, New York, vice W. F. Stevenson, deceased. Office, 1550 Woolworth Building.

**Grand Trunk Pacific Ry.**—W. E. BELL has been appointed acting Chief Assistant to Manager of Telegraphs, G.T.R. and G.T.P.R., during absence on leave of A. P. Linnell. Office, Montreal.

C. E. BROOKS, heretofore acting Superintendent of Motive Power, has been appointed Superintendent of Motive Power, and will also assume the duties of Master Car Builder, J. L. Hodgson having resigned to enter National Transcontinental Ry. service. Office, Transcona, Man.

A. McTAVISH, heretofore Locomotive Foreman, Biggar, Sask., has been appointed Locomotive Inspector, to look after G.T.P.R. motive power equipment turned out of the Transcona shops by the National Transcontinental Ry.

E. HACKING, heretofore Car Foreman, Prince George, B.C., has been appointed

General Car Foreman, to look after G.T.P.R. car equipment turned out of the Transcona shops, now operated by the National Transcontinental Ry.

R. P. GRAVES, heretofore Resident Engineer, Fort William, Ont., has been transferred west of Winnipeg.

H. DARBY has been appointed acting Locomotive Foreman, Biggar, Sask., vice A. McTavish, promoted.

J. A. BRYANT, heretofore General Yardmaster, Mission Yard, Fort William, Ont., has been transferred to Edmonton, Alta.

J. A. BRYANT, heretofore General Yardmaster, Fort William, Ont., has been appointed Yardmaster, Edmonton, Alta., vice C. W. Sweet, assigned to other duties.

C. A. MUNRO has been appointed Car Foreman, Prince George, B.C., vice E. Hacking, promoted.

The following station agents have been appointed,—Fort Qu'Appelle, Sask., A. G. Redford; Mawer, Sask., —. Pelland; Frobisher, Sask., J. R. Wilson; Irma, Alta., H. F. Jones; Viking, Alta., T. W. MacKenzie; Calgary, Alta., J. L. Dodds.

**Grand Trunk Ry.**—W. E. BELL has been appointed acting Chief Assistant to Manager of Telegraphs, G.T.R. and G.T.P.R., during absence on leave, of A. P. Linnell. Office, Montreal.

The following station agents have been appointed,—St. Rosalie Jct., Que., passenger, J. A. Tardif; Goodwood, Ont., J. F. Reid; Limehouse, Ont., W. L. Milliere; Port Dover, Ont., W. A. Murray; Harrisburg, Ont., H. W. Sussex; Centralia, Ont., P. B. Wade.

Through the utilization of an unconfirmed item, published in an English paper, it was announced in our last issue that E. J. Wearing had been appointed acting General Assistant, G.T.R. and Canadian Express Co., Liverpool, England, vice W. Cuthbertson, deceased. We are officially advised that the position of General Assistant has been abolished, temporarily at least. E. J. WEARING is Passenger Agent, G.T.R., and has also been appointed acting General Agent, Canadian Ex. Co., and J. M. CHARLES is Freight Agent, G.T.R. Offices, 20 Water St., Liverpool, England.

**Intercolonial Ry.**—C. W. BLEAKNEY is reported to have been appointed foreman of machine shop, Moncton, N.B., vice Jas. Starkey, transferred.

J. STARKEY, foreman of machine shop, Moncton, N.B., is reported to have been appointed foreman of erecting shop there, vice W. D. Stewart, appointed Assistant to General Storekeeper, Canadian Government Railways, Transcona, Man.

**National Transcontinental Ry.**—H. BAILEY, formerly Bridge and Building Master, Dominion Atlantic Ry., Yarmouth, N.S., has been appointed Bridge and Building Master, District 1, N.T.R., vice P. J. Henselwood, resigned. Office, Parent, Que.

J. E. SIMPSON has been appointed Roadmaster, Quebec and Fitzpatrick Subdivisions, vice A. Beauseigle. Headquarters, Parent, Que.

M. J. SHERIDAN has been appointed acting Roadmaster between mileage 109.5, Cochrane Subdivision, and mileage 63.4, Grant Subdivision, vice J. Wilson. Headquarters, Grant, Ont.

P. BARNARD has been appointed Roadmaster, Graham Subdivision, Redditt to Graham. Headquarters, Graham, Ont.

D. CAMPBELL has been appointed Bridge and Building Master, Winnipeg to Fort William. Headquarters, Fort William, Ont.

A. M. MACGILLIVRAY has been appointed Resident Engineer, Winnipeg to Fort William, vice R. P. Graves. Office, Fort William, Ont.

R. A. POSTANS has been appointed Road-

master, Lake Superior Branch, Fort William to Graham. Headquarters, Fort William, Ont.

C. H. LUNDGREN has been appointed General Yardmaster, Mission Yard, Fort William, Ont., vice J. A. Bryant.

J. L. HODGSON, heretofore Master Car Builder, Grand Trunk Pacific Ry., has been appointed General Car Foreman, N.T.R., in charge of Car Department, Transcona, Man., and of Car Department at divisional points, Transcona to Fort William inclusive. Office, Transcona, Man.

J. A. MITCHELL has been appointed General Foreman in charge of Motive Power Department, Transcona, Man.

G. E. McGUIRE has been appointed General Yardmaster, Transcona, Man.

H. McCORMICK has been appointed Roadmaster, Winnipeg Subdivision, Winnipeg to Redditt. Headquarters, Transcona, Man.

R. KING, heretofore Agent, C.P.R., Cornwall, Ont., has been appointed Assistant Superintendent, District 3, N.T.R. Office, Winnipeg, Man.

D. W. STEEPER, heretofore Trainmaster, G.T. Pacific Ry., Graham, Ont., is now engaged as a passenger conductor, N.T.R., between Graham, Ont., and Winnipeg, Man.

Dr. JOHN M. LENEY has been appointed Assistant Chief Medical Officer, with jurisdiction from Cochrane to Winnipeg and from Lake Superior Jct. to Fort William. Office, Winnipeg.

**New York Central Rd.**—The position of Superintendent of Rolling Stock has been created for the district west of Buffalo, N. Y., by separation from the Motive Power Department, and all employees and appurtenances connected with these departments have been separated for maintenance and operation accordingly.

W. O. THOMPSON, heretofore District Master Car Builder, East Buffalo, N.Y., has been appointed Superintendent of Rolling Stock, West of Buffalo, N.Y. Office, Cleveland, Ohio.

D. R. MacBAIN, Superintendent of Motive Power, West of Buffalo, continues in that position.

**St. John and Quebec Ry.**—W. M. DUNLOP, Chartered Accountant, Ottawa, Ont., has been appointed Commissioner for adjusting claims against the company, by the New Brunswick Government, which has taken over the line, owing to default.

**Thousand Islands Ry., Oshawa Ry.**—H. W. COOPER, heretofore Secretary-Treasurer, has been appointed Manager, vice J. F. Chapman, deceased. Office, Gananoque, Ont.

J. H. VALLEAU has been appointed Secretary-Treasurer, vice H. W. Cooper, appointed Manager. Office, Gananoque, Ont.

**Wabash Rd.**—W. A. HOPKINS, heretofore Division Freight Agent, Toledo, Ohio, has been appointed General Live Stock Agent, vice J. L. Harris, resigned to accept service elsewhere. Office, St. Louis, Mo.

R. A. BROWN, heretofore Travelling Freight Agent, Buffalo, N.Y., has been appointed Commercial Agent, Cleveland, Ohio, vice D. E. Gilbert, promoted.

T. A. SHERWOOD, heretofore Travelling Freight Agent, Memphis, Tenn., has been appointed Travelling Freight Agent, Buffalo, N.Y., vice R. A. Brown, promoted.

**Winnipeg Joint Terminals.**—H. J. HUNT, heretofore Trainmaster, has been appointed acting Terminals Manager, vice P. J. Flynn, resigned to enter C.N.R. service. Office, Winnipeg.

W. McAULEY, heretofore General Yardmaster, has been appointed Trainmaster, vice H. J. Hunt, promoted.

## Railway Development.

### Projected Lines, Surveys, Construction, Betterments, Etc.

**Alberta and Great Waterways Ry.**—J. D. McArthur, President, is reported to have said Sept. 3 that track laying would be started immediately on the section of the line from Lac la Biche to Fort McMurray, 144 miles, and that, as the grading was practically completed, track laying was expected to be completed by Dec. 31. The line from Carbondale, the junction with the Edmonton, Dunvegan and British Columbia Ry., to Lac la Biche, 114 miles, is reported to be practically ready for traffic. (Sept., pg. 341.)

**Alberta Oil Fields.**—E. A. Cunningham, of the Alberta Petroleum Consolidated Co., Calgary, is reported to have said recently:—"The key to the oil situation is transportation and refining. As to the former we have a railway planned to tap the northern field, and we are working to get thing started."

**Athabasca and Fort Vermillion Ry.**—The preliminary survey being made for a projected railway from Athabasca Landing to Fort Vermillion, is reported to have located two possible points for the building of a bridge across the Athabasca River, and to have reached Wabiscaw, on the survey for the best route to Fort Vermillion. C. F. Law, who represents the D. A. Thomas interests in Vancouver, and A. C. Galbraith, Chief Engineer of the A. and F. V. R., left Edmonton, Alta., Aug. 27, for Fort Vermillion, where they expect to meet the survey party. The other projects in which the Thomas interests are concerned are the Pacific, Peace River and Athabasca Ry., and the Peace River Tramway and Navigation Co. (Sept., pg. 341.)

**Burrard Inlet Tunnel and Bridge Co.**—At the annual meeting of the shareholders in North Vancouver, B. C., Sept. 8, it was reported that none of the plans submitted by the Board were acceptable to the Provincial Government, without considerable alterations, and that the Government would not agree to any work being started on the bridge until complete arrangements had been made for the money necessary to finish it. The funds available amount to \$1,500,000, while the lowest tender on the present plans is \$1,744,831. The Dominion subsidy is contingent upon the bridge being completed by Aug. 1917, and the company's present charter expires in April 1916. It was decided to apply for an extension of time for construction of the bridge, and for a renewal of the Dominion subsidy. The directors for the current year are:—F. L. M. Carter-Cotton, President; Mayor Taylor, Vice President; Aldermen Woodside, McLurg, Foreman and Councillor Loutet. These represent the several municipalities interested in the construction of the bridge.

**Central Canada Ry.**—J. D. McArthur, President, is reported to have said in an interview, Sept. 3, that all the grading was under way to the proposed crossing of Peace River, and that sufficient progress had been made to warrant him in stating that track laying would be completed by the end of the year. The line starts at McLennan, on the Edmonton, Dunvegan and British Columbia Ry., and was completed to mileage 28 in 1914, track being laid on this mileage in the spring. The grading now in progress consists of 22 miles of rather difficult work. (July, pg. 255.)

**Dominion Government Railway to Hudson Bay.**—The contractor, J. D. McArthur, is reported to have said in an interview recently, that the accident early in the summer, when

the trestle bridge over Armstrong Lake gave way, had not interfered materially with the summer's work on the line. When the two big bridges are completed over the Nelson River, which it is expected will be the case next spring, he anticipates that there will be very little work left to be done to complete the line for operation. At the time of the accident a locomotive and a track layer were precipitated into the lake, these have been definitely located, and it is expected that they will be recovered during the winter.

From the experiences of the past summer it is believed that navigation of the Hudson Strait and Bay will be possible in July. The supply boats have left the wireless equipment for installation at several points on the straits and bay. Five dipper and clam shell dredges have been built at Port Nelson for harbor dredging work. Good progress is being made with the laying out of the railway terminals at Port Nelson, the work being reported to be in charge of Engineer Bayfield, who is said to have replaced Engineer McLachlan, formerly in charge. (Sept., pg. 348.)

**Edmonton, Dunvegan and British Columbia Ry.**—Track was reported, Sept. 3, to have been laid on the temporary bridge across the Big Smoky River, mileage 290 from Edmonton, Alta., and is being continued to the Spirit River, a further distance of 67 miles. Grading on the branch line to Grande Prairie, about 60 miles, let to J. Timothy, is reported to be well forward, and it is expected to have track laid on it by Dec. 31.

The permanent bridge over the Big Smoky River is in course of erection by the contractor for the steelwork, the Dominion Bridge Co. It will consist of 85 ft. deck plate girder approach spans, six 128 ft. deck truss spans, and one 125 ft. through truss span which will be erected over the navigable channel. (Aug., pg. 304.)

**Grand Trunk Ry.**—The Montreal City Council has adopted two reports of its railway engineer recommending that the Lachine, Jacques Cartier and Maisonneuve Ry., a G. T. R. subsidiary, be permitted to cross about 50 streets in the north end of the city. This is a projected line through the Maisonneuve manufacturing district, and considerable difficulty has been experienced in bringing the negotiations for the right of way to a successful issue. (Sept., pg. 345.)

**Great Northern Ry. (U. S. A.)**—Construction is reported to be in progress in the section of the Vancouver, Victoria and Eastern Ry. branch near Grand Forks, B. C., on a bridge over the North Fork Canyon. The new bridge will be 662 ft. long, on stone and concrete abutments. About 2,000 ft. of track has been laid to connect the branch with the C. P. R. branch to the Granby Smelter, pending the reconstruction of the bridge.

That plans for the G. N. R. station on the reclaimed land at False Creek, Vancouver, are being prepared in that city by F. Townley, was reported to the bridges and railway committee of the city council at a recent meeting. Under the Board of Railway Commissioners' order dated June 2, construction on the new station is to be started within six months. (Sept., pg. 349.)

**Intercolonial Ry.**—During the summer a large amount of ballast has been laid on the lines on Cape Breton Island, between Point Tupper and Sydney, while the bridges have all been overhauled and repaired. A new

timber bridge is being built at Grand Narrows, which will raise the track 4 ft. above the present level. The bridge is expected to be completed early in November.

The new station at Humphreys, N. B., was reported, Sept. 10, to be nearly completed, and the new freight shed at Levis, Que., replacing the one burned down, was expected to be completed Oct. 31. (Sept., pg. 341.)

**The International Union Terminals Co. of Seattle, Wash.**, through A. F. Gillies and E. C. Matheson, laid a proposal before the Bridge and Railway Committee of the Vancouver City Council, Aug. 30. The company proposes to lay out a union terminal on Burrard Inlet, between Main St. and Heatley Ave., with tunnels to False Creek, and an electric railway from Vancouver to Seattle, Wash., at which place the company plans to lay out a similar terminal. The officers of the company, it is stated, are: President, J. C. Eden; Vice President, M. McDougall; Treasurer, J. McMasters; and Secretary, F. C. Jackson, all of Seattle. The cost of the entire Canadian end of the project is mentioned as \$50,000,000, and the first unit would involve an expenditure of \$15,000,000. An option, it was said, had been secured on the Hastings Mill site. The financial end of the project would be handled by the Stone and Webster interests of Boston, Mass., and it was sought to arrange with the Western Canada Power Co. for the necessary power.

**Kettle Valley Lines.**—The extension from the Coquihalla summit to Hope on the Fraser River, is expected to be completed by Nov. 30. Track is being laid, and the erection of the 7,500 lineal feet of snow sheds is well forward. Track laying is being gone on with from the Hope end, and is reported to have reached Ladner Creek, where a steel bridge is being built. The bridge across the Fraser River at Hope has been completed, and the tracks connecting with the C. P. R. have been laid. (Sept., pg. 341.)

**Pacific Great Eastern Ry.**—It is expected to have the track laid and the line completed from Squamish, the seacoast terminal, as far as Clinton, B. C., this autumn. It is hoped to have track laid to the Hundred Mile House by Dec. 31. From Fort George about 50 miles of grading has been completed southerly, and it was reported, Sept. 5, that work on this section was at a standstill. (Sept., pg. 341.)

**Prince Edward Island Ry.**—Tenders are under consideration for the erection of a station building, water tank, locomotive house, transfer platform, standpipe pit, ash-pit and turntable foundations for the car ferry terminal at Carleton Point, P. E. I. The carrying out of this work will complete the works necessary for the operation of the car ferry to the mainland at Cape Tormentine, N. B.

The car ferry terminal works at Cape Tormentine are reported to be nearly completed. The last crib of the 1,070 ft. built was put in position recently, and is practically an extension of the previously existing breakwater. In this cribwork about 3,000,000 ft. of lumber, board measure, and 120,000 tons of stone have been used. As soon as the last crib is completed the work of driving the pile fender for the ferry will be gone on with. Two dredges are at work within the enclosed area dredging the approach to the ferry landing. A breakwater nearly 600 ft. long, and containing about 140,000 tons of stone is being built. The substructure work is also in a forward condition. The work is being carried out by A. T. Markle and the O'Brien and Doheney Co., with the Lynn Brennan Co. as subcontractors. F. P. Frapp, Ottawa, is Engineer in charge, with J. McLean as Assistant Engineer on the work.

**St. John and Quebec Ry.**—Under the act passed by the New Brunswick Legislature in the spring, the company's charter has been taken over by the Provincial Government, and a new board of directors has been appointed to complete the construction. The first work taken in hand by the new board is the adjustment and settlement of outstanding claims arising out of the construction of the 120 miles, between Gagetown and Centreville. This section is being operated by the Canadian Government Railways, under a contract. The uncompleted section of the line extends from Centreville to Grand Falls, and from Gagetown southerly to St. John. On this latter section three big bridges across the Kennebecasis and the St. John Rivers are necessary, the cost of which is to be borne by the Dominion Government.

A party of St. John business men visited the sites of the proposed crossing at the Mistake, Sept. 9. Borings are being made there, under the direction of the Provincial Government, to decide which site will be adopted. (Sept., pg. 341.)

**St. John and Quebec Ry.**—A meeting of the shareholders was held in the Provincial Government Buildings, Fredericton, N. B., Sept. 8, when the directors appointed recently by order-in-council, were elected directors for the current year. The directors subsequently elected the following officers: President, I. R. Todd, St. Stephen; First Vice President, R. O'Leary, Richibucto; Second Vice President, W. S. Fisher, St. John; Treasurer, J. D. Palmer, Fredericton; Secretary, E. Girouard, Moncton. Each of the five directors appointed has thus been elected to an office. It is said that as soon as questions connected with the adjustment of outstanding accounts are settled the directors will give consideration to the letting of contracts for the construction of the sections of the line from Centreville to Grand Falls, and from Gagetown southerly.

**Toronto, Hamilton and Buffalo Ry.**—G. A. Mountain, Chief Engineer of the Board of Railway Commissioners, visited Hamilton, Sept. 11, and inspected the King St. West bridge, which the city is asking to have widened and strengthened. The present bridge is 30 ft. wide, and the city desires that it be made 55 ft. wide. Mr. Mountain will report as to the plans, and the Board may make an order as to what, if anything, can be done, and how the cost is to be apportioned between the company and the city. (June, pg. 212.)

**Toronto Terminals Co.**—An order-in-council was passed at Ottawa, Sept. 4, providing for the building, at the cost of the Dominion Government, of the east wing of the new union station in Toronto, which will be used for post office purposes. It is said that there is now nothing in the way of an early start being made upon the erection of the new building. (Sept., pg. 349.)

**Gopher Extermination in the West.**—The Canadian Northern Ry. has since the early with instructions for its use, for the destruction of gophers in the districts through which it operates. The poison is mixed with wheat of inferior grade, which in most cases is supplied by local elevator companies, but where this cannot be arranged, wheat is purchased. Records of the cost, time, territory covered, and effectiveness of the poison are kept, which up to date show that the efforts made have proved efficacious. In most municipalities bylaws have been passed requiring farmers to destroy gophers on their lands, and the co-operation of the railway has been of considerable benefit in the efforts to exterminate the pest.

## Freight Rates on Steel from the United States to Saskatchewan and Alberta.

Early in September, S. J. McLean, one of the Board of Railway Commissioners, gave the following opinion on the complaint of the Saskatchewan Bridge and Iron Co., of Moose Jaw, Sask., Chief Commissioner Sir Henry Drayton, concurring:—

The applicant desires to tender for building a bridge at Calgary, Alta. The situation is that steel is brought from Pittsburg, Pa., via. Minnesota Transfer (St. Paul) over the "Soo" line to Moose Jaw, where it is fabricated and then shipped on to Calgary. The applicant complains of being at a disadvantage of 12c as compared with the movement via. Winnipeg. Steel is shipped from Pittsburg via. Minnesota Transfer to Winnipeg, and thence shipped to Calgary. The rate situation is as follows:

Pittsburg-Minnesota Transfer (Commodity) .....	38.2c
Minnesota Transfer-Winnipeg (Class) .....	32 "
Winnipeg-Calgary (Class) .....	56 "
Through .....	126.2 "
Pittsburg-Minnesota Transfer (Commodity) .....	38.2c
Minnesota Transfer-Moose Jaw (Class) .....	64 "
Via Portal (Soo Line)	
Moose Jaw-Calgary (Class) .....	36 "
Through .....	138.2 "

Difference against Moose Jaw—12 cents.

Omitting the movement from Pittsburg to St. Paul, which is common both to the movement to Winnipeg and Moose Jaw, the situation is that the total mileage from St. Paul to Calgary, via. Winnipeg, is 1,295 miles; and from St. Paul to Calgary, via. Moose Jaw, it is 1,168 miles; that is to say, the movement by way of Winnipeg is 127 miles longer. The rate from St. Paul to Winnipeg is 32c. While the distance from St. Paul to Winnipeg is 458 miles, the rate is not made on that distance. The policy of the United States lines is to give Minneapolis and St. Paul the same rate as Duluth. Duluth is 397 miles from Winnipeg; consequently the St. Paul rate is made on this shorter mileage. The "town" tariff rate is not applicable on the movement from St. Paul to Emerson, nor is it applicable on the movement from Emerson to Winnipeg. If it had been applicable for the distance of 458 miles, the rate would have been 37c. If the traffic were moving the same distance in Canada between two points covered by the prairie scale, and if neither of these points was a "town" tariff point, the rate on the prairie mileage scale would be 44c. It is thus apparent that as the result of the Duluth rate controlling the St. Paul rate, the actual rate is 5c less than would have applied on the actual movement from St. Paul if the Canadian "town" tariff rate had been applicable, and 12c less than would have been the case had the Canadian standard prairie scale applied. From Moose Jaw to Calgary, the distance is 438 miles. The "town" tariff rate applies. Consequently, in respect of the movement out of Winnipeg and a movement out of Moose Jaw, both are on the same basis, subject, of course, to the effect exercised by the tapering of the rate on the longer haul. On the movement from St. Paul to Moose Jaw, the "town" tariff rate does not apply. Of the total distance of 730 miles between these points, 168 miles, that is the distance between North Portal and Moose Jaw, is within Canada. On the 562 miles from St. Paul to the boundary, a higher rate basis applies than on the movement from Winnipeg. There is no "town" tariff from North Portal; and even if there were the advantage of the "town"

tariff would not be applicable unless the steel were stopped in transit at North Portal to be fabricated and shipped beyond. It may be noted that the rate charged is 2c higher than would be the case on the same mileage under the standard prairie scale.

To sum up the matter, the situation when analyzed is as follows: There is a low rate basis into Winnipeg which is brought about by the policy of the United States lines in making the Minneapolis and St. Paul-Winnipeg rate on the basis of the shorter mileage via Duluth. This rate is divided on percentages, and for the 66 miles from Emerson to Winnipeg the Canadian carrier receives 32½% of the rate, or 10.4c. At the same time, the haul by the Canadian carrier represents 14% on mileage. The rate being controlled as indicated, it happens that the division received, viz., 10.4c., is practically identical with the "town" tariff rate for the same distance, viz., 10.5c. On the movement from St. Paul to Moose Jaw, the factor of a correlated shorter mileage point is not present to hold down a portion of the rate. On the movement from the Canadian boundary at North Portal to Moose Jaw, 168 miles, no "town" tariff is applicable. On a movement of the same distance from a Canadian point into Winnipeg, no "town" tariff would be applicable. On the movement via Winnipeg, the "town" tariff is effective from Winnipeg to Calgary, 837 miles. On the movement via Moose Jaw, the "town" tariff is effective only from Moose Jaw to Calgary, 438 miles. Of the movement to Moose Jaw, 562 miles is within United States territory. The rate is higher than in Canada. The situation is, then, that for a haul of 730 miles to Moose Jaw, the rate charged is higher than it would be under the standard mileage of the prairie scale. There is no difference in rate treatment in respect of movements in Canada as between similar movements into and out of Winnipeg on the one hand and into and out of Moose Jaw on the other. There is a higher rate basis on the haul in the United States. Here the Board has no jurisdiction.

## Canadian Pacific Railway Construction, Betterments, Etc.

**North Toronto Union Station.**—The corner stone of the new union station at North Toronto was laid Sept. 9, by Mayor Church, A. D. MacTier, General Manager, Eastern Lines, representing the C. P. R. A full illustrated description of the new building appeared in our August issue, page 298.

**Alberta Division.**—W. A. James, Division Engineer of Construction, Western Lines, arrived in Lethbridge, Aug. 25, and proceeded to Foremost, to take charge of track laying on 25 miles of the grading completed easterly on the Weyburn-Lethbridge line. The work is expected to be completed early in October.

A petition from farmers resident in the Kipp-Lomond district of Alberta has been forwarded to the C. P. R. by the Lethbridge Board of Trade, asking for the grading of an extension from Kipp to Lomond, the farmers offering to give one week's work of a man and team each. (Sept., pg. 349.)

**The Roadmasters' and Maintenance of Way Association's annual convention** was held at Chicago, Ill., Sept. 7 to 10. Following are the officers for the current year:—President, C. King, Jamaica, N. Y.; First Vice President, M. Burke, Chicago, Ill.; Second Vice President, A. Grills, General Roadmaster, G.T.R., St. Thomas, Ont.; Secretary, L. C. Ryan, Sterling, Ill.; Treasurer, W. H. Kofmehl, Elgin, Ill.

# Orders by the Board of Railway Commissioners for Canada.

The Board, with June 1901, Canadian Railway and Marine World has published in each issue a list of orders passed by the Board of Railway Commissioners, so that subscribers will be kept posted on paper have a continuous record of the Board's proceedings. No other publication has done this.

The index, which of orders, immediately following the numbers, are those on which the orders were made.

Order 24102, as summarized in Canadian Railway and Marine World in September, has been cancelled and the following order substituted:

24102. Aug. 19.—Allowing increased rates on pulpwood to Mechanville, N.Y., via Boston & Maine R.R., on Supplement 1 to C. P. R. joint freight tariff, C.R.C. no. 1-2817, and Supplement 1 to G.T.R. Joint Freight Tariff, C.R.C. 288, supplements to become effective not earlier than Nov. 1, and rescinding order 23020, Dec. 22, 1911.

24104. Aug. 19.—Ordering G.T.R. to switch cars in its service, and to interswitch cars in the service of any other railway with which it has connection at Cobourg, to and from track on Esplanade alleged to be owned by the Town, when desired to do so by the Mayor in writing, in general terms on condition that G.T.R. shall not be responsible for collection from consignees of freight charges nor for damages to cars nor loss of contents while on siding, unless caused by or resulting from negligence of G.T.R., its servants or agents, and rescinding order 21976, June 12, 1914.

24105. Aug. 19.—Amending order 21181, Jan. 1901, re provision of signalmen for interlocking plant at crossing by Campbellford, Lake Ontario and Western Ry. (C.P.R.) of G.T.R., at Cobourg, Ont.

24106. Aug. 19.—Allowing correction of error in plan, profile and book of reference to show land from station 5+60 to station 9+62, shown bordered yellow on plan, as being owned by the G.T.R., shown bordered green on revised plan marked A, instead of as being owned by Department of Railways and Canals.

24107. Aug. 19.—Relieving G.T.R. from providing further protection at second crossing south of Hespeler, Ont.

24108. Aug. 19.—Authorizing Alberta & Great Waterways Ry. to join its track with Edmonton, Dunvegan & British Columbia Ry.

24109. Aug. 19.—Authorizing Dominion Government, for Province of Ontario, to build highway crossing over Canadian Northern Ry. west of North Bay, about half a mile west of Meadowside, Pedley Tp., Ont.

24110. Aug. 16.—Authorizing London Railway Commission to build team tracks on north side of Bathurst St., from junction of London & Port Stanley Ry., on Bathurst St., near Burwell St., east to Adelaide St., London, Ont., no rail to be laid within 16 ft. south of street line; and authorizing it to build a track on north half of Bathurst St., from Richmond St. west to Thames St., track to be planked between rails to 18 in. on either side; track not to be used for storage purposes, and car not to be loaded on the highway.

24111. Aug. 21.—Authorizing C.P.R. to use bridge 242 over the Otonabee River, near Peterborough, Ont.

24112. Aug. 21.—Authorizing G.T.R. to use bridge over C.P.R. at Myrtle, Ont.

24113. Aug. 21.—Authorizing C.P.R. to use bridge 3416, Toronto Subdivision, at Cavan, Ont.

24114. Aug. 24.—Ordering G.T.R. forthwith to move station building at Mimico, Ont., from the present location to its original position, as near as may be to the south of track; station to be cleaned and put in proper order for use.

24115. Aug. 21.—Ordering Canadian Northern Ry. to build extra pen, of the same size as present one, at Waseca, Sask.; to be completed by Sept. 15.

24116. Aug. 20.—Approving changes in location of Montreal and Southern Counties Ry., from station 1765+05.9 to station 1788+02.9, St. Paul d'Abbotsford Parish, and authorizing the M. & S. C. R. to build across Jackmann's Road, Rouville County, Que.

24117. Aug. 20.—Approving plan and specifications showing work to be done on Wilson-Mathers Drain under G.T.R., near Sarnia.

24118. Aug. 24.—Authorizing C.P.R. to build road through Canmore station grounds, Alta., to cross Y to coal mine in n. e. ¼ Sec. 32-24-10, and cross its main line in s. w. ¼ Sec. 33-24-10, and to close portion of road allowance along eastern boundary of n. e. ¼ Sec. 32-24-10, w. 5 m., which lies within station grounds, except portion of road allowance within boundaries of proposed road.

24119. Aug. 20.—Approving plan, July 15, showing girder to be erected at trestle bridge over Shawinigan River, Que.

24120. Aug. 26.—Relieving speed restriction of 15 miles an hour imposed on that portion of C.P.R.'s Shebo Extension, from Leslie to Wynward, Sask., mileage 66.2 to 89.0.

24121. Aug. 26.—Authorizing Central Canada

Ry. to join Edmonton, Dunvegan and British Columbia Ry. in Tp. 77, R. 20, w. 5 m.

24122. Aug. 28.—Ordering that wages of watchmen at crossing of Winnipeg Electric Ry. and C.P.R. at Logan Ave., Winnipeg, Man., be paid by Winnipeg Electric Ry. as from Dec. 16, 1912.

24123. Aug. 28.—Authorizing Great Northern Ry. to remove regular agent at Baynes, B.C., on its Crownsnest Southern Line, caretaker to be appointed to attend to station and care for I.C.I. freight and express matter.

24121. July 31.—Extending, to Nov. 1, time within which G.T.R. shall complete highway crossing over its track in Tay Tp., Ont.

24125. Aug. 30.—Authorizing Town of Windsor, N.S., to build wooden box culvert under Dominion Atlantic Ry. where it crosses the old bed of Cunnabel Creek, culvert to have 4 by 6 ft. opening and be according to C.P.R. standard and under D.A.R. supervision.

24126 to 24130. Aug. 30, 26.—Approving Bell Telephone Co. agreements with Muskoka, Victoria and Haliburton Telephone Co., Aug. 16; Noisy River Telephone Co., Aug. 20; Mornington and Wellesley Telephone Co., Aug. 13; South Bruce Rural Telephone Co., Aug. 19; and New Dundee Rural Telephone Co., Aug. 12.

24131. Aug. 31.—Extending, for four months from date, time within which C.P.R. shall complete sidings in Bala, Ont.

24132. Aug. 28.—Approving Canadian Northern Ry. Release of Responsibility Special Contract, in connection with transportation of perishable freight in cold or stormy weather.

24133. Aug. 30.—Authorizing Kettle Valley Ry. to carry freight over its line from junction with C.P.R. near Hope, B.C., mileage 39.5 easterly to mileage 31.

24134. Sept. 2.—Authorizing C.P.R. to enter L. G. Perry's lands, s. e. ¼ Sec. 22-8-3, w. 3 m., Sask., for ploughing fireguards on each side of its right of way between mileage 15.2 and 15.6, Shaunavon Subdivision, Sask.

24135. Sept. 3.—Authorizing Canadian Northern Ry. to open for traffic its line from Laird to Carlton, 8 miles, speed of trains limited to 15 miles an hour.

24136. Sept. 1.—Authorizing Hamilton St. Ry. to operate over crossing of Toronto, Hamilton and Buffalo Ry. spur to Steel Co. of Canada's premises, Hamilton, Ont.

24137. Sept. 1.—Ordering that \$250 directed under order 24000 to be paid by York Tp., Ont., towards cost of installing bell at crossing of Eglinton Ave., be divided equally between C.P.R. and G.T.R., on account of separate bells required under amending order 24092.

24138. Sept. 1.—Extending, for 30 days from date, time for Great Northern Ry. to install bell at highway east of White Rock station, B.C.

24139. Sept. 2.—Authorizing G.T.R. to rebuild overhead farm crossing between Lots 10 and 11, Con. 1, Murray Tp., Ont.

24140. Sept. 2.—Authorizing C.P.R. to build extension of siding for McKinnon, Holmes & Co., Ascot Tp., Ont.

24141. Sept. 3.—Authorizing Canadian Northern Ry. to open for traffic its line from Tichfield to Dumblane, 8 miles; speed of trains limited to 15 miles an hour.

24142. Sept. 2.—Approving C.P.R. revised location from near Stony Creek to easterly portal of Rogers Pass Tunnel, mileage 76.44 to 80.20, Mountain Subdivision, B.C.

24143. Sept. 2.—Ordering Lake Erie and Northern Ry. to provide suitable overhead farm crossing with a 10% grade for A. and D. J. McEwen, Brantford Tp., Ont.

24144. Sept. 2.—Approving plan of C.P.R. standard pile trestle with 20 ft. clear opening.

24145. Sept. 7.—Authorizing C.P.R. to build temporary conveyor and trestle across its track at mileage 105.79, Toronto Subdivision, Ont.

24146. Sept. 7.—Authorizing Canadian Northern Ry. to open for traffic its line between Canora and Sturgis, Sask., 22 miles.

24147. Sept. 3.—Authorizing Canadian Northern Ry. and Suburban Rapid Transit Co. to operate half-interlocking plant at crossing on Portage Ave., Winnipeg, Man.

24148. Sept. 7.—Authorizing Rural Municipality Fertile Valley, no. 285, Sask., to build highway crossing over Canadian Northern Ry. Elrose Branch in n. e. ¼ Sec. 8-28-9, w. 3 m., at C.N.R. cost.

24149. Sept. 8.—Ordering G.T.R. to install, within 30 days, a derail at east end of siding at Killaloe, Ont., a light to be kept burning on derail at night to indicate its position.

24150. Sept. 8.—Ordering Toronto, Hamilton & Buffalo Ry. to re-arrange bents of timber trestle over Hamilton Radial Ry., at Sherman Inlet, Hamilton, Ont., within 60 days from date.

24151. Sept. 9.—Authorizing Canadian Northern Ry. to divert road in n. e. ¼ Sec. 9-53-16, w. 4 m.

24152. Sept. 7.—Ordering C. N. Quebec Ry. to fence west side track from mileage 23.5 to 25.2, Sarazin Siding to Deer Lake, Montfort Subdivision, and complete same by Oct. 15.

24153. Sept. 9.—Authorizing Saskatchewan

Government to build highway over Canadian Northern Ry. at south end station grounds at Richard, at C. N. R.'s cost.

24141. Sept. 7.—Approving clearances at G.T.R. siding for West, Taylor, Bickle & Co., Norwich, Ont.

24155. Sept. 8.—Authorizing C.P.R. to build extension to spur for Curtis's & Harvey Canada, Ltd., Lots 5 and 6, Rigaud Parish, Vaudreuil County, Que.

24156. Sept. 10.—Authorizing C. N. Quebec Ry. to build spur for La Compagnie des Produits Agricoles, Lac St. Jean, Que.

24157. Sept. 10.—Approving C.P.R. plans, re clearances at country elevators, in compliance with order 23935, subject to condition that side of siding farthest from elevators have clearance of at least 6 ft. from gauge side of nearest rail.

24158. Sept. 8.—Ordering Esquimalt & Nanaimo Ry., within 60 days, to install improved automatic bell at crossing Comox Road, Nanaimo, B.C.; 20% to be paid out of railway grade crossing fund.

24159. Sept. 10.—Approving proposed road diversion by G. T. Pacific Ry. in s.w. ¼ Sec. 8-21-2, w.2 m., mileage 253 west of Winnipeg, Yorkton District, Sask., subject to consent of rural municipality 183.

24160. Sept. 9.—Authorizing G.T.R. to build siding from east of Don River, Toronto, into Toronto Harbor Commissioners' premises, crossing of 150 ft. roadway to be according to standard regulations; siding to be built at expense of Toronto Harbor Commissioners, and completed within three months.

24161. Sept. 11.—Authorizing Great Northern Ry. to withdraw for present year its service on its Croville-Princeton Subdivision, B. C., required by order 23663, May 4, effective Sept. 15.

24162. Sept. 10.—Relieving Canadian Northern Ry. from providing further protection at crossing of main road between Brockville and Westport, Ont.

24163. Sept. 13.—Authorizing Great Northern Ry. to withdraw its suburban train service between Crescent and Vancouver and New Westminster, B. C., from June 15 to Oct. 15 each year, subject to condition that it stop trains 355 and 356 on flag signal at Ocean Park, Crescent, Townsend and stations between New Westminster and Vancouver.

24164. Sept. 14.—Authorizing London Railway Commission to build transfer track between London & Port Stanley Ry. and G.T.R. at St. Thomas, Ont.

24165. Sept. 13.—Authorizing C.N. Quebec Ry. to dispense with use of signal levers 1, 2, 3, 7, 11 and 12 at interlocking plant at crossing of C.P.R. east of Lorette.

24166. Sept. 13.—Relieving C.P.R. and Canadian Northern Ry. from maintaining night signalman to operate interlocking plant at Mervin Jct., Man.

24167. Sept. 13.—Relieving Canadian Northern Ry. and C.P.R. from maintaining night signalman to operate interlocking plant in lot 56, Portage la Prairie Parish, Man.

24168. Sept. 3.—Ordering G.T. Pacific Ry. to build and divert road allowance between Secs. 35 and 36-53-10, w. 5 m., across its track, crossing to be on 7% grade.

24169. Sept. 14.—Authorizing C.P.R. to build spur on s.w. ¼ Sec. 28 and n.e., n.w. and s.e. ¼ Sec. 21-14-10, e.p.m., and across allowances between Secs. 28 and 21, and Secs. 21 and 16, and across Winnipeg Electric Ry. transmission line; and rescinding order 24091, Aug. 12.

24170. Sept. 14.—Relieving G.T.R. from providing further protection at crossing at 10th line of Brooks, 5 miles west of Alvinston, Ont.

24171. Sept. 11.—Authorizing Dixville Municipality, Que., to build crossing over G.T.R., ½ mile west of Dixville station.

24172. Sept. 15.—Extending to Oct. 4, time within which Great Northern Ry. shall fence portion of right of way, mileage 187 to 188; also entire right of way, mileage 185.2 to 188.75; and 189.50 to 191.45.

24173. Sept. 15.—Relieving Canadian Northern Ry. from providing further protection at highway one mile south of Clarkleigh, Man.

24174. Sept. 11.—Extending for 60 days from date time within which clearances between G.T.R. railway and telegraph poles carrying Great North Western Telegraph Co.'s wires and railway wires between Guy St. and St. Henri station, Montreal, were authorized.

24175. Sept. 15.—Extending to Dec. 31, time within which C.P.R. shall complete extension to siding for Cataract Jct. Sand & Gravel Co., Lot 14, Con. 3, west of Hurontario St.

24176. Sept. 14.—Authorizing residents of Mont Laurier, Que., to build highway over C.P.R. at Ouellette St.; and dismissing application for crossings at Lafontaine and Des Belges St.

24177. Sept. 16.—Authorizing C.P.R. to build spur for Western Terminal Elevator Co., West Fort William, Ont., and approving clearance there.

24178. Sept. 15.—Extending to Oct. 15, time within which C.P.R. shall install bell at crossing at Ketepec station, N.B.

24179. Sept. 13.—Authorizing Canadian Northern Ry. to open for traffic its line between Inwood and Hodgson, Man., 50 miles, and rescinding order 23001, Dec. 14, 1914.

24180. Sept. 16.—Authorizing Canadian Northern Ry. to open for traffic its North Battleford Northwestern line from Edam to Turtleford, Sask., mileage 38 to 57, speed of trains limited to 18 miles an hour.

24181. Sept. 16.—Authorizing C.P.R. to cross at grade, Walnut St., Galt, Ont.

24182. Sept. 16.—Authorizing City of Merritt, B.C., to build highway crossing where Main St. crosses C.P.R.

24183. Sept. 16.—Extending for six months from date, time within which C.N. Quebec Ry. shall complete siding across Stadacona and Marlborough Sts., Montreal.

24184. Sept. 17.—Authorizing Canadian Northern Ry. to open for traffic its line from Wroxton Jct. to Yorkton, mileage 0 to 25.2.

24185. Sept. 16.—Authorizing C.P.R. to enter upon land, ¼ Sec. 31-8-4, e.p.m., Man., mileage 14, Emerson Subdivision, fireguards to be built in accordance with Fire Guard Regulations, May 3.

24186. Sept. 17.—Ordering G.T. Pacific Ry., as provided by Sec. 254 of Railway Act., to erect fence on north side right of way on Lot 35, Tp. 47, r. 13, w. 4 m., to be completed within

60 days from date.

24187. Sept. 17.—Amending order 24087, Aug. 14, re location of Toronto Terminals Co.'s railway between York St. and Don River, Toronto.

24188. Sept. 18.—Approving proposed Supplement No. 5 to Canadian Freight Classification 16, as amended, revised and resubmitted by Canadian Freight Association, Sept. 14, to become effective not later than Nov. 1, with exception of item giving specifications for cheese boxes, which is to become effective not later than Dec. 1.

24189. Sept. 17.—Ordering Halifax & Southwestern Ry. to fence right of way from Chain Lake to Bayers Lake, 1 mile, to be completed within two weeks from date.

24190. Sept. 15.—Extending to May 30, 1916, time within which Canadian Northern Ry. may carry traffic temporarily, over its Oakland Branch from mileage 42 to end of track, 12 miles, speed of trains limited to 12 miles an hour.

General order 148. Sept. 1.—Authorizing all railway companies within legislative control of Parliament of Canada and operating in Alberta and Saskatchewan, to endorse upon bills of lading, approved under order 7562, amount of advances for seed grain, fodder for animals, and other goods furnished to persons in those provinces, and interest agreed to be paid, authorized by Chap. 20 of 1915, and as provided under order in council of July 23, 1915.

## Canadian Northern Railway Construction, Betterments. Etc.

Sir William Mackenzie arrived in Ottawa, Sept. 7, after having made a trip over the Canadian Northern Ry. lines, starting at Toronto and travelling via Capreol, Port Arthur, Winnipeg, and Edmonton to Port Mann, B.C., and thence to Vancouver, and on his return going over to the eastern section of the main line between Capreol and Ottawa. The trip occupied over two weeks, and was made in a special train. During its course the newly completed lines between Ruel and Port Arthur, from near the Yellowhead Pass to Port Mann, and the Capreol-Ottawa section, were given special attention, as they are to be put into immediate operation. A freight service on the through line from Toronto to the Pacific Coast is expected to be started in October and a passenger service in November.

The line will only be operated to New Westminster for the present, but will be extended to Vancouver as soon as the terminal work at False Creek has been completed. In the meantime the Great Northern Ry. tracks will be used between New Westminster and Vancouver. In an interview at Vancouver, Aug. 28, Sir William Mackenzie is reported to have said that the company has the necessary funds, and is prepared to go ahead with the terminal project. While certain work has been in progress on the False Creek flats, which are being reclaimed for terminal purposes by the Canadian Northern as well as by the Great Northern Ry. (U. S.), there have arisen certain difficulties respecting which negotiations were in progress which were brought to a definite conclusion during the President's visit. That this is the case appears evident from statements made at a meeting of the city's Bridge and Railway Committee, Sept. 2. The chairman of the committee announced that tenders for the construction of the seawall section of the False Creek reclamation plans would be called for by the end of the month, and said the plans were in the hands of the City Engineer for approval. The cost of the work is estimated at \$115,000, and it is expected to be completed within five months. This work is in addition to that now in progress at the head of the creek. About 2,000,000 cubic yards of filling are reported to have been put in there up to Aug. 31. The erection of the station, which is to be built 250 ft. east of the east line of Main St., on the line between the Canadian Northern and the Great Northern Ry. sections of the site, is, it is said, to be completed by Mar., 1918. The total cost

of the projected terminal work at Vancouver is estimated at \$5,000,000.

Referring, in the Vancouver interview to the construction of the Vancouver Island line, Sir William Mackenzie is reported to have said the Patricia Bay line will be rushed to a completion, and that a ferry service to the mainland will be put in operation as soon as possible after the inauguration of regular traffic on the line to New Westminster. D. O. Lewis, Division Engineer, on his return to Victoria, after having met Sir William at Vancouver, is reported to have said that track laying would be started at once on the lines on Vancouver Island, and would be gone on with as far as the stock of rails available would carry it.

The Board of Railway Commissioners has authorized the opening for traffic of the following extensions of lines:—From Laird to Carleton, 8 miles, an extension of the branch from Dalmeny in the direction of Prince Albert, Sask.; from Tichfield to Dumblane, 8 miles, an extension of a branch of the line from Saskatoon to Elrose, Sask.; and from Canora to Sturgis, Sask., 22 miles, a line connecting the main line to Saskatoon with the Thunderhill branch.

On branch line work, press reports state that track laying is being gone on with on the extension of the Thunderhill Branch for

on the extension of the Camrose line southeasterly towards Battle River. It is also reported that there have been talks for building two 200 ton automatic locomotive coaling plants at Kindersley, Sask., and Big Valley, Alberta. (Sept., pg. 348.)

**Canadian Local Freight Agents' Association.**—A branch of this association for Port William and Port Arthur, Ont., was organized at a meeting held at Port William, Sept. 9, when the following officers were elected:—President, G. H. Drowley, Canadian Northern Ry., Port Arthur; Vice President, C. E. Legg, C. P. R., Port William; Secretary-Treasurer, M. Travers, C. P. R., Port William.

**Steam Railway Electrification in England.** The section of the Lancashire and Yorkshire Ry. between Manchester and Bury, which is being electrified, will, it is expected, be ready for operation during November. The third rail system has been adopted, the same as is used on the line between Liverpool and Southport, which has been in operation several years. Corridor cars will be adopted.

## Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,206,100	\$921,000	\$285,100	x\$145,400
Aug.	1,192,800	914,000	278,800	(x) 200
	\$2,398,900	\$1,875,000	\$523,900	\$151,300
Decr.	\$ 563,100	\$ 411,800	\$151,300	.....
	x Decrease.			

Mileage in operation at Aug. 31, 4,965, against 1,670 at same period 1914.

Approximate earnings for three weeks ended Sept. 21, \$1,182,400, against \$1,345,400 for same period 1914.

## Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$7,895,375.47	\$5,094,972.35	\$2,800,403.12	x\$978,042.71
Aug.	7,895,375.47	5,094,972.35	2,800,403.12	x\$978,042.71
Decr.	\$2,586,596.25	\$1,608,553.54	\$ 978,042.71	.....
	x Decrease.			

Approximate earnings for August, \$7,914,000, against \$9,532,000 for Aug., 1914, and for three weeks ended Sept. 21, \$6,624,000, against \$7,184,000 for same period 1914.

## Grand Trunk Railway Earnings, Etc.

The following figures show the earnings for the G.T.R. (including the Canada Atlantic Ry.), the G.T.W.R. and the D.G.H. & M.R. for August:

Grand Trunk Railway.	
Earnings .....	\$3,612,900
Expenses .....	2,507,500
Net earnings .....	\$1,105,400
Grand Trunk Western Railway.	
Earnings .....	\$635,950
Expenses .....	512,500
Net earnings .....	\$123,450
Detroit, Grand Haven and Milwaukee Ry.	
Earnings .....	\$249,100
Expenses .....	188,400
Net earnings .....	\$60,700
Approximate earnings for August, \$4,585,881, against \$4,853,740 for Aug., 1914, and for three weeks ended Sept. 21, \$3,188,108, against \$3,267,866 for same period 1914.	
TRAFFIC RECEIPTS OF THE SYSTEM.	
Aggregate from Jan. 1 to Aug. 31:—	
	1915                      1914                      Incr                      Decr.
G.T.R.....	\$25,771,392      \$28,188,120                      \$2,416,728
G.T.W.R.....	4,788,364      4,746,721      \$41,643
D.G.H.&M.R..	1,720,902      1,630,296                      90,606
Totals.....	\$32,280,658      \$38,565,137                      2,284,479

## Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section, 916 miles, for August were \$259,581, against \$363,074 for Aug., 1914. Aggregate earnings for two months ended Aug. 31, \$481,088, against \$707,061 for same period 1914.

## Songhees Indian Reserve, Victoria, B. C.—

The British Columbia Department of Public Works is laying out the portion of the Songhees Indian Reserve, Victoria, received by it on the partition with the railway companies. The plans include the building of a retaining wall along the waterfront, and the reclamation of an extensive area behind it, the construction of a public road across it extending from high level at the proposed Johnson St. terminal to a subway at the wharf level, and a railway track to be used jointly by the Esquimalt and Nanaimo Ry. (C. P. R.) and the Canadian Northern Pacific Ry. After the reserve is laid out it is proposed to complete the scheme by the erection of two freight docks, a coal dock and a ferry slip, as required by the development of the area reserved for industrial plants. H. A. Icke is resident engineer in charge of the work.

## Traffic Orders by the Board of Railway Commissioners.

### Endorsement of Bills of Lading re Advances For Seed Grain, Etc.

General order 148, Sept. 1, re the collection of advances for seed grain, fodder for animals and other goods by way of relief, furnished to persons in Alberta and Saskatchewan, under the authority of the Statutes of 1915, chap. 20, and the Board's order 7562, July 15, 1909, approving forms of bill of lading for use by railway companies, and setting forth conditions and limitations to be endorsed upon them. Upon the request of the Governor General in Council that railway companies be instructed to endorse upon the bills of lading under which shipments of grain are made in Alberta and Saskatchewan, the amount payable for advances for seed grain, fodder for animals and other goods, as authorized under said Statutes of 1915, chap. 20, and the interest agreed to be paid, and reading what has been filed on behalf of the Canadian Pacific, Canadian Northern and Grand Trunk Pacific Railway Companies: It is ordered that in pursuance of the powers conferred upon the Board under the Railway Act, sec. 340, and all other powers possessed by it in that behalf, all railway companies within the legislative control of the Parliament of Canada and operating in Alberta and Saskatchewan, are authorized to endorse upon the bills of lading, approved under order 7562, the amount of advances for seed grain, fodder for animals and other goods furnished to persons in Alberta and Saskatchewan, and the interest agreed to be paid, authorized by said chap. 20 of the Acts of 1915, and as provided under Order in Council of July 23, 1915.

### Fredericton Freight and Passenger Rates.

24001. July 27. Re application of the Board of Trade of Fredericton, N. B., for an order remedying arbitrary and discriminatory rates on both freight and passenger traffic to and from Fredericton, on the Canadian Pacific and Intercolonial Railways; and the application of the C. P. R. Co. for a rehearing of the matter: Upon hearing the application of the Board of Trade of Fredericton at St. John, N. B., May 14, 1914; and upon consideration of the general principles involved as developed at the hearing of the application of the C. P. R. Co. at Ottawa, Nov. 17, 1914, and what was alleged; and upon its appearing that the matter has been standing for submissions from the Board of Trade of Fredericton, and that none have been received: it is ordered that the application of the Board of Trade of Fredericton be refused.

### Class Rates, Winnipeg to Two Creeks.

24040. Aug. 3. Re complaint of Two Creeks Grain Growers' Association alleging unjust discrimination in freight rates as between Winnipeg and Elkhorn, and Winnipeg and Two Creeks, Man., on the C. P. R., to the prejudice of Two Creeks: It is ordered that the C. P. R. be directed forthwith to amend its distributing tariff from Winnipeg, St. Boniface, Paddington and North Transcona, so as to apply the same rates to Two Creeks, as to Elkhorn.

Commissioner McLean gave the following judgment:—Elkhorn, which is on the C. P. R. main line, 198 miles west of Winnipeg, had a 1st class rate of 54c, the other classes being appropriately scaled. Two Creeks, 194 miles west of Winnipeg, has a 1st class rate of 57c. Complaint is made of the difference as being discriminatory. On the movement west from Winnipeg to the two points in question, the mileage is common to Virden: Elkhorn is 16.8 miles west of

Virden, on the main line. Two Creeks is 13.4 miles north-westerly from Virden, on the line extending from Virden to McAuley. Both Two Creeks and Elkhorn fall within the mileage grouping from 190 to 200 miles, inclusive, of the standard freight mileage tariff, and therefore are prima facie entitled to the same rate on the mileage scale. Two Creeks was first opened to traffic in March, 1910. The history of the arrangements whereby the so-called Manitoba Scale was worked out has been set out in the judgment of the Board in the Western Rates Case. In substance, the standard mileage rate applicable in Manitoba was arrived at by deducting 15% from a hitherto existing uniform scale applicable generally in the prairie provinces. The distributing, or "town" tariff, rates were arrived at by a further deduction of 15%. The standard 1st class rate for the Two Creeks distance was 68 cents, and the "town" tariff rate was 57c. Adding to this the charge for Winnipeg cartage, viz. 3c., the 1st class rate would be 60c. This was the rate charged to and from Two Creeks. The Elkhorn 1st class rate at the same time was 57c. In May, 1912, the railway company abolished its cartage service at Winnipeg, reducing the 1st class rates by 3c in each case. This made the Elkhorn 1st class rate 54c and the Two Creeks 1st class rate 57c.

The railway company in its answer alleges that the rate to Elkhorn as established prior to Sept. 1, 1914, had been erroneous, and that it should properly have been 57c. The railway company stated, further, that as it was understood that under the Board's Order in the Western Rates Case, no rates were to be raised, the old rate of 54c from Winnipeg to Elkhorn was continued, although it was out of line. Miniota, the terminus of the branch line system from Chater, is 196.8 miles from Winnipeg and falls in the same mileage group as Elkhorn and Two Creeks. It is in the same territory as Two Creeks, being about eight miles due north of it. It has a rate of 54c which, standing by itself, might appear to be controlled by the fact that the Grand Trunk Pacific has the short distance, viz. 180 miles, the appropriate rate for which is 54c. However, the C. P. R. operated to Miniota before the Grand Trunk Pacific was in operation. The original rate to Miniota was 57c, 1st class. By deduction of the cartage charge, the present rate of 54c was arrived at. Winnipeg to Virden, 180.5 miles, falls within the group of the standard mileage, covering from 180 to 190 miles. The distributing rate appropriate to this is 54c. Harmsworth, which is 8.7 miles west of Virden, on the Virden-McAuley Branch, falls within the same group as Virden, and is given the 54c rate.

It is alleged that the difference in rate as between Elkhorn and Two Creeks does not create a discriminatory situation. It is stated that the two points have nothing in common; that the tonnage in and out of Two Creeks is insignificant; that Two Creeks is situated on a branch line, while, on the other hand, Elkhorn is on the main line, where the cost of operating is lower and the density of tonnage and population much greater. While reference has been made to the difference in the density of traffic as between the main line and the branch line, the pertinency of this is not apparent when it is considered that what is involved is a general mileage scale. As has been indicated, the 54c rate is also given to Elkhorn; but, while Virden and Harmsworth, falling within the same mileage group, are given the same rate, and while Elkhorn and

Miniota have the same rate, Elkhorn and Two Creeks, falling within the same mileage group, are given different rates, as has been indicated. This is a discriminatory treatment, which has not been justified, and Two Creeks should be given the same rate as is given to Elkhorn.

### Interchange of L. C. L. Traffic at Lyn, Ont.

24039. Aug. 3. Re complaint of J. N. Knowlton, Jr., of Newboro, Ont., that the Canadian Northern Ry. refuses to accept from the Grand Trunk Ry. at Lyn, Ont., certain goods consisting of a sewing machine and box of settlers' effects consigned to him from Black Rock, N. Y., on June 29, 1915: Upon its appearing that Lyn is shown in the Official Stations Lists of the Grand Trunk and Canadian Northern Railway Companies, C.R.C. nos. E.2368 and E.227, respectively, as a point of transfer, by track connection, for freight in less than carload lots, as well as in carloads between the said companies' railways, and that freight in less than carload lots has accumulated at Lyn because of the refusal of the Canadian Northern to receive other than carload shipments from the Grand Trunk over the said track connection; It is ordered that the Canadian Northern forthwith accept the said less-than-carload freight from the Grand Trunk over the track connection between the railways of the two companies at Lyn, and forward it to its destinations without further delay.

### Interchange Facilities at Calgary.

24079. Aug. 13. Re application of City of Calgary, Alta., for the construction of interchange tracks between the Grand Trunk Pacific and Canadian Pacific Railways there: Upon hearing the application at Calgary on Nov. 26, 1914, and a subsequent sitting at Calgary on June 9, 1915, and it appearing that the Department of Trade and Commerce, in order to secure access for the Grand Trunk Pacific Ry. to the elevator at Calgary of the Board of Grain Commissioners for Canada, is willing to contribute \$14,000 toward the construction of the interchange tracks—It is ordered that the Grand Trunk Pacific Ry. forthwith proceed with the construction of interchange tracks between its railway and the C. P. R., at the location known as 'the Globe Elevator site,' in accordance with plans to be submitted by the railway company to the Board for approval, upon the following conditions: The Department of Trade and Commerce will pay to the Grand Trunk Pacific Ry. \$14,000 towards the cost of the construction of the interchange tracks. The construction of the interchange tracks is to be carried on under the supervision and to the satisfaction of an engineer of the Board.

### Pulpwood Rates to Mechanicville, N. Y.

24102. Re complaint of Auger & Son and the d'Auteuil Lumber Co., of the City of Quebec, against Supplement 1 to the C. P. R. Tariff, C.R.C. no. E.2847, increasing rates on pulpwood to Mechanicville, N. Y., via Boston & Maine Rd.: It is ordered that Supplement 1 to C. P. R. Joint Freight Tariff, C.R.C. no. E.2847, and Supplement 16 to Grand Trunk Ry. Joint Freight Tariff, C.R.C. no. 2588, providing increased rates on pulpwood to Mechanicville, via Boston & Maine Railroad, be allowed: the said supplements to become effective not earlier than Nov. 1, 1915; and that order 23020, Dec. 22, 1914, suspending the said supplements, be rescinded.

### Interswitching to Cobourg Town Dock.

24104. Re application of Town of Cobourg, Ont., for an order directing the Grand Trunk Ry. to grant access to the harbor or dock located on the town esplanade, owned by the corporation, and connecting

with the G. T. R. main line: It is ordered that the G. T. R. be directed to switch cars in its service, and to interswitch cars in the service of any other railway company with whose railway it has, or may have, a connection at Cobourg, to and from the track on the esplanade alleged to be owned by the Town of Cobourg, when desired to do so by the Mayor or Clerk of the Municipality, in writing, in general terms, or in specific cases, upon condition that the G. T. R. shall not be responsible for the collection from consignees of freight charges nor for damages to cars, nor for damage to or loss of contents while on the said siding, unless caused by or resulting from the negligence of the G. T. R., its servants or agents. Order 21976, June 12, 1914, is rescinded.

#### Release Form for Carriage of Freight in Cold or Stormy Weather.

24132. Aug. 28. Re application of the Canadian Northern Ry. for approval of Release of Responsibility Special Contract in connection with transportation of perishable freight in cold or stormy weather. It is ordered that the said Special Contract be approved.

#### Supplement to Canadian Freight Classification.

24188. Re application of Canadian Freight Association, on behalf of the railway companies subject to the Board's jurisdiction under section 321 of the Railway Act, for an order approving the proposed Supplement 5 to Canadian Freight Classification 16, containing certain increased, reduced, and additional ratings: Notice of the proposed increased ratings having been given in The Canada Gazette, as required by sec. 321 of the Railway Act, and the Board having invited consideration thereof by the Canadian Manufacturers' Association, the Montreal Chamber of Commerce, the Ontario Wholesale Grocers' Guild, and the Boards of Trade of Halifax, St. John, Quebec, Montreal, Ottawa, Toronto, Hamilton, Brantford, London, Winnipeg, Brandon, Regina, Saskatoon, Calgary, Edmonton, Vancouver, and Victoria; upon the consideration of what has been filed; and upon the recommendation of the Chief Traffic Officer of the Board—It is ordered that the said proposed supplement, as amended and revised and resubmitted for approval by the Chairman of the Canadian Freight Association, by letter dated at Montreal, Sept. 14, 1915, be approved, to become effective not later than Nov. 1, 1915, with the exception of the item on page 9 giving specifications for cheese boxes, which is to become effective not later than Dec. 1, 1915.

#### Canadian Northern Standard Mileage Tariff.

24200. Sept. 20. Re application of Canadian Northern Ry., under sec. 327 of the Railway Act, for approval of its Standard Freight Mileage Tariff C.R.C. no. W-862, cancelling C.R.C. no. W-793. It is ordered that the said tariff be approved.

**Fish Traffic in Western Canada.**—Since the opening of the Grand Trunk Pacific Ry. to Prince Rupert, B. C., there has been a large development in the fishing industry at that point, and considerable shipments are being made to Chicago and the middle west. By the opening of the Edmonton, Dunvegan and British Columbia Ry. northward from the G. T. P. R. main line, the fishing in Lesser Slave Lake has been made accessible. Two companies have been formed to deal with the business, and the Canadian Express Co. has been called on to supply special refrigerator cars to carry fish to Edmonton and thence to Winnipeg by G. T. P. R., and on by connecting lines to Chicago.

#### Railway, Finance Meetings, Etc.

**Algoma Central and Hudson Bay Ry.** The bondholders' committee has issued a circular stating, as a result of its recent enquiries, that while it is unable to recommend that any action be taken at present against the Lake Superior Corporation, it feels bound to criticise the financial arrangements which were made, under which the Corporation guaranteed the bonds of the railway company, the terminal company and the Algoma Steel Corporation, and other concerns. The guarantee was entirely dependent for any value upon the success of the various subsidiaries whose bonds were guaranteed. Some important negotiations are pending, and as the committee desires to strengthen its hands, it has requested bondholders to deposit their bonds with the Bank of Montreal.

**Klondike Mines Ry.** Following are the officers and directors for the current year, elected at the recent annual meeting,—President, H. B. McGiverin; Vice President, J. P. Ebbs; Secretary, A. Haydon; other directors,—John Latta and C. G. Kekewich.

**White Pass and Yukon Route.** Gross earnings from Jan. 1 to July 31, \$739,582 against \$804,498 for same period 1914.

**Lachine, Jacques Cartier and Maisonneuve Ry.**—The annual meeting was held at Montreal, Sept. 7. Following are the directors for the current year:—President, E. J. Chamberlin; Vice President, R. S. Logan; Secretary-Treasurer, Frank Scott; other directors, H. G. Kelley, J. E. Dalrymple, W. H. Biggar, K. C., and Hugh Paton.

**Shuswap and Okanagan Ry.**—Canadian Pacific Ry.—Application is being made to

the Board of Railway Commissioners for a recommendation to the Governor General in Council to sanction the leasing of the Shuswap and Okanagan Ry. to the C. P. R. for 999 years from July 1, 1913. The S. and O. R. extends from Sicamous Jct., on the C. P. R., to Okanagan Landing, on Okanagan Lake, B. C., 50.8 miles. The line was built under a British Columbia charter granted in 1886, and was finally opened for traffic in 1893 by the C. P. R., under a lease for 25 years. The British Columbia Legislature authorized the issue of \$1,249,760 of 4% bonds upon which there was a provincial guarantee of interest for 25 years from 1890, receiving in return 40% of the gross receipts.

**Thousand Islands Ry.**—The Annual meeting was held at Deseronto, Ont., Sept. 13. Following are the directors for the current year: President, E. W. Rathbun, Deseronto, Ont.; Secretary-Treasurer, J. H. Valteau, Gananoque, Ont.; Manager, H. W. Cooper, Gananoque, Ont.; other directors, C. S. Lee and B. R. Hepburn.

**Toronto Terminal Ry. Co.**—The annual meeting was held at Montreal, Sept. 14. The officers and directors for the current year are,—President, H. G. Kelley; Vice President, George Bury; other directors, Sir Thomas G. Shaughnessy, E. J. Chamberlin, I. G. Ogden, J. E. Dalrymple; Secretary, H. Phillips; Treasurer, H. E. Suckling; General Manager, J. W. Leonard; Auditor, W. H. Ardley; General Solicitor, W. C. Chisholm; Chief Engineer, J. R. W. Ambrose.

**Franklin Railway Supply Co.,** New York, has opened an office in the Transportation Building, Montreal, in charge of J. S. Coffin, Jr., as Canadian Sales Manager.

### Railway Rolling Stock Notes.

The Canadian Northern Ry. has received 10 steel frame baggage cars from National Steel Car Co.

The Intercolonial Ry. has received 300 of the 650 box cars, which were ordered recently from Canadian Car and Foundry Co.

Canadian Locomotive Co., Ltd., Kingston, is building 16 Canadian Baldwin electric trucks for the Lake Erie and Western Ry. for standard gauge suburban electric cars.

### Steel Frame Box Cars for Canadian Government Railways.

The 350 forty ton box cars which are being built for Canadian Government Railways by the National Steel Car Co., Hamilton, Ont., are of steel frame type from drawings submitted by the Superintendent Rolling Stock, G. R. Joughins. Following are the general dimensions:

Height from rail to top of brake mast	13 ft. 10 ins.
Height from rail to top of eaves	12 ft. 7 1/4 ins.
Width over eaves	9 ft. 3 1/2 ins.
Length inside	36 ft. 0 ins.
Width inside	8 ft. 6 1/2 ins.
Distance between pulling face of couplers	39 ft. 11 1/4 ins.

To resist the shocks and injury to end sheathing, 2 3/4 in. oak blocking extending 3 ft. from floor is bolted through end sheathing to centre and corner posts. Over the side door track is placed a hood 11 1/2 ft. long, no. 14 gauge, thus ensuring weather proof conditions and the easier working of door. To further assist in making the car weatherproof, the side plate filler on Z-bar side plate besides fitting snugly between T carline has a continuous bearing surface between end of carline connection and edge of Z bar side plate. Side doors are 5 ft. 4 ins. long. At one end of car 16 1/2 ins. from floor is a 10 x 10 in. rail door opening with a steel sliding door inside of car. A cast steel pocket is placed in the rail door opening and bolted to car. On same end of car a grain door opening 14 x 24 and 19 1/2 in. from bottom of end plate is covered on outside of car by a steel sliding door and on inside of car by a swinging door of pressed steel. The roof is the all metal inside type resting on T shape carlines. Ladder rounds are riveted to stiles which can easily be detached from car in case of repairs. The pressed shape running board splice is designed by the builders. Couplers are the top operating type operated by uncoupling device.

The centre sills consist of two 15 in. 23-lb. channels spaced 12 3/4 in. back to back with a 19 1/2 in. cover plate at bolster. At ends of centre sill is riveted a pressed shape sub draft sill designed to take twin spring draft gears, and stiffened with a 3 x 3 in. angle between sub draft sill and centre sill. The side sills are 8 in. 11.25 lb. channels connected to end sills by gussets. The end sills consist of 10 in. 15 lb. channels with a 12 in. cover plate which is riveted to centre and side sills. Between bolster and end sill is a 5 x 3 1/2 x 3/8 in. diagonal brace riveted to pressed shaped gussets. The bolster and cross bearer diaphragms are pressed shapes and the bridging of 4 in. 8.2 lb. Z-bars. Between the centre and side sills is a 3 in. 6.7 lb. Z-bar, the length of car, to which the floor is bolted. Nuts are secured by nut locks. The side framing consists of 3 in. Z-bars riveted directly to side sill and to side plate by means of pressed shaped connections. The side plate is a 4 1-16 in. 10.3 lb. Z-bar

and the end plate of a pressed Z-shape plate. The end framing consists of two 4 in. 8.2 lb. Z-bars and two intermediate posts of 3 in. 6.7 lb. Z-bars. The end framing together with the end blocking ensures a thoroughly strong end and is capable of resisting the shocks and injuries due to movements of material in the car.

Westinghouse air brakes are used complete with centrifugal dirt collector, and J. M. piston expander rings. The trucks are of the arch bar type with bolsters fitted with roller attachments and side bearings, and cast steel centre plate. Trucks are equipped with the McCord malleable iron journal boxes with improved McCord lid. The brake beam is hung from brackets cast integral with cast steel columns. The malleable brake heads are fitted with safety keys. Brake shoes are steel back.

### The Obsolete Gross Ton.

E. J. McVeigh, General Storekeeper, Grand Trunk Ry., writes Canadian Railway and Marine World: "When is a ton not a ton? Answer—When it is a gross ton. But why a gross ton? Who, away back in the dark ages started the thing anyway? And why in the name of common sense, meaning something very uncommon, should we as, presumably intelligent people continue to use it? Is it convenient? No. Does it get us anything beyond confusion and trouble? No. Then why, and again why? If we would only stop to think for a moment, which few of us do, would we go on following a useless, and worse than useless custom or habit? Try the thing yourself. Figure out 987,468 lbs. at \$14.60 a gross ton. Then figure it at the net ton. And then think of all the poor clerks in Canada and the United States, who are using the gross tons, and making mistakes. Then ask yourself, why the gross ton? Surely it is a dead one, long dead, so pitch in and help to bury it."

### Miscellaneous Electric Railway Matters.

**Running Board on the Toronto Ry. Cars.** The charge against the Toronto Ry. Co. for criminal negligence in operating cars with an outside running board, was heard at the Toronto Police Court, Sept. 2, when formal evidence only was taken and the case sent for trial to a higher court.

**The Sandwich, Windsor & Amherstburg Ry.,** is running a special night service to and from the Michigan Central Rd. station at Windsor, Ont. A car leaves Ouellette Ave. and Sandwich St. at 12 midnight to connect with C. P. R. train 19. A car leaves the same point at 1.30 a. m. to connect with C. P. R. train 20 and to return to starting point if there are passengers on that train for Windsor.

**Proposed Commission for Three Border Towns.**—A Windsor, Ont., press dispatch says that at a meeting there representatives of the municipal councils of Windsor, Walkerville and Sandwich adopted a resolution in favor of asking the Ontario Government to enact legislation for the formation of a metropolitan commission to deal with all street railway questions and to take charge of the waterworks, sewers and Hydro-electric system of each of the border municipalities.

**Children's Fares on Ottawa Electric Ry.**—The Ottawa Electric Ry. has notified the public that all children under 10 years of age, excepting only infants in arms, will be charged a 3c. fare. The practice has hitherto been to let children up to 5

years, in company with parents or guardians, travel free, and to charge half fare for those between 5 and 12 years. The abuse of this by parents and those in charge of children has led the company to give notice that it will charge 3c. in cash according to the published tariff for children under 10. This will not affect the school children's rate, which is 20 tickets for 50 cents, good only during school hours.

### Miscellaneous Marine Matters.

A press report from Vancouver states that an attempt is to be made shortly, to save the C.P.R. Islander, which sank in the Lynn Canal nearly 14 years ago. Previous attempts have been made in this connection, and it is said that the safe on board contains several thousand dollars worth of gold dust. A new diving apparatus is to be tried on the work. The vessel is said to be lying in 320 ft. of water, but its exact location has not been arrived at.

**The Donald Steamship Co. Ltd.** has been incorporated under the Dominion Companies Act, with \$500,000 capital and office at Montreal, to carry on business as steamship owners, agents, brokers, etc., and to own and operate steam and other vessels, wharves, docks, piers and other shipping facilities. The incorporators are, R. T. Heneker, K. C., H. N. Chauvin, G. A. Coughlin, H. Wylie and C. A. Shannon, Montreal.

**The International Mercantile Marine Co.'s** plan for reorganization has been declared operative by the reorganization committee, and in making this announcement the committee states that the continued large earnings of the properties indicate that the assured cash resources of the company made it unnecessary for the stockholders to subscribe to the bonds of the new company at \$2.50 a share. Stockholders were allowed to deposit their securities without payment of this subscription, and those who had already paid, could obtain a refund up to Oct. 1, which date was set as the limit for the deposit of stock, trust certificates and bonds under the new arrangement.

**Panama Canal Traffic.** In the first fiscal year of operation, ended June 30, but embracing only 10 1/2 months, from Aug. 14, 1914, to June 30, 1915, the canal was used by 1088 vessels, and 4,969,762 tons of cargo were moved. At this rate the movement would be 5,679,762 tons in a full calendar year, 473,313.4 tons a month or 15,530.6 tons a day. The movement was 2,125,735 tons eastbound and 2,844,057 westbound. The heaviest month was March, when 635,057 tons were moved. There were only 137 vessels moved that month, however, while in June 143 vessels carried only 603,180 tons. In May 142 vessels carried a still smaller tonnage.

**Victoria Harbor Improvement Works.**—water and piers at Ogden Point, Victoria, B.C., is proceeding rapidly. The break-work on the construction of the breakwater will extend out to sea about 1,500 feet, and from the end will project an elbow about 750 feet long. The base of this will be about 200 feet wide and 50 feet high, composed of rubble, capped with granite blocks and concrete. On the eastern side there will be a pier 1,000 feet long, and on the western side one of 800 feet, giving accommodation for 11 ocean-going vessels. The concrete cribs for the bases of the piers are being built at Esquimalt and floated to their locations and sunk into position. The contractors for the breakwater are Sir John Jackson (Canada), Ltd., and for the piers, Grant, Smith and MacDonnell, Ltd.

# Electric Railway Department

## Motorman Instruction on the Toronto and York Radial Railway.

By A. M. Smith, Master Mechanic, Toronto and York Radial Railway.

In 1902, W. H. Moore, Assistant to President, Toronto Ry., introduced an organization of roadmasters on that line who were to operate directly on the cars. The special duties of these officers was to keep in direct touch with the men on their respective runs, so as to be ready at all times to instruct them in their duties when necessary to improve the service, with the result that a more regular service was maintained, careless men disciplined, defects reported and complaints investigated. Official attention given to these matters soon showed their worth, not only in improving the men, but the officials obtained information otherwise overlooked and of value to the management.

Meetings of the roadmasters were held from time to time, at which suggested improvements were open to discussion by the roadmasters, and these meetings were greatly encouraged by the presence of the superior officers when possible for them to attend, who assisted and encouraged the men, and corrected any errors that might arise. The writer had the pleasure of attending and taking an active part in these discussions, the object of which was to obtain as nearly as possible an uninterrupted service, better conditions and safe transportation, all of which naturally involved the selection of better men.

Instructions were prepared and given to the roadmasters, who in turn instructed their men, so that when a new man was trained as a motorman, he was not sent to the official responsible for final examination without first being properly prepared by the roadmaster, resulting in a considerable saving in time.

After the introduction of this system of instruction, it became apparent that something more than mere verbal instruction was necessary to properly demonstrate the practical side of their duties. Therefore, in 1903, the writer prepared a system of lamps, similar to that shown in the accompanying illustration, for this purpose, to show as nearly as possible the exact working of the electrical equipment on the car, and so arranged that breakdowns such as occur on the line could be demonstrated, and the methods of locating and repairing the trouble visualized. This arrangement shows a controller, each motor separate, rheostat, etc. The practice in using this system was to cause one roadmaster to leave the room while another disabled the equipment, the absent roadmaster on returning being instructed to locate the trouble, and when located, to make temporary repairs or cut out the defective part, and proceed. The other roadmasters took a keen interest in these tests, absorbing as much information as possible, and anxiously waiting their turn to locate and repair defects. As one roadmaster remarked after submitting to this test, "We were only drivers before, now we are motormen." When the trouble was located and a repair made, the lights would indicate whether it was performed correctly or not. These lights would show the motors cut out, effect of one motor being open, sectional and unit operation of the rheostat the lights replacing acceleration, and they would also show plainly the action of the different parts of the equipment. This left little doubt in the minds of those receiving instructions as to just

what should be done in the event of any breakdown.

All motormen on the Toronto and York Radial Ry. receive similar instruction on the equipment shown in the illustration, and my department has been greatly benefited in the saving of time and the convenience of having the men trained and capable of repairing minor defects, and bringing home the car without having to send out men from the mechanical department, perhaps miles up the line. All motormen train ten days with an instructor, after which they receive their final examination on the system. At the same time the necessity for care, responsibility and obedience is impressed on their minds. The results obtained have been very gratifying to me,

Arrangement of Lamps for Instruction Purposes, Toronto and York Radial Railway.

and I feel justified in saying that I believe Mr. Moore was in many ways amply repaid for undertaking such an organization, which at that early date was responsible for showing the necessity for safety first methods in more careful training. I have used this system for years, and still use it with very satisfactory results.

(EDITORIAL NOTE.—One of Canadian Railway and Marine World's editorial staff was present recently at the examination of a candidate for motorman, to observe the operation of the system. The candidates are first given ten days road instruction as mentioned above, by trained and older motormen, who have demonstrated their ability to impart the necessary instruction. The final examination is made by Mr. Smith personally, the equipment shown in the illustration being located in a corner of his office.

The method followed by Mr. Smith is rather unique, but the results obtained would seem to demonstrate the value of

the method followed. The examination may be said to be in two parts: first, a general talk and queries, and second, a practical test on the demonstration board. The remarks open with a few words intended to instil loyalty in the candidate. This is emphasized by a simple comparison between a jeweller selling a watch, and the motorman selling his services, the inference being that in both cases value must be given, or the motorman is not living up to his obligations. This is followed by a reading of the more salient sections of the Ontario Railway Act, in so far as they affect the prospective motorman. A general talk follows on the evils of taking chances, and the duties of the motorman at crossings, switches, etc. Special emphasis is placed on the actions of the motorman in the car, as the company is judged by the actions of its employees.

The candidate is required to give the path of the electricity through the car, which is followed by a general talk on the use and duties of equipment parts; knowledge of the circuit breaker, as a power control, an indicator of trouble, a protection from overcrowding of the motors, a cutout in case of the controller sticking, and a safeguard to the operator, are required of the candidate, and the several features are elaborated on by Mr. Smith. The action of the controller and rheostat, and a comparison of the combination with a valve are brought to the candidate's attention.

The candidate is then taken to the test board, and the action of the car under normal operating conditions shown, the lights gradually increasing in intensity, representing the increasing power to the motors as the controller is moved from the off to the on position, the row of lights representing the rheostat, also sections being cut out one by one as the controller is moved forward, this and the action of the motors in this change being shown clearly by the action of the banks of lights.

Various defects are made in the outfit, by unscrewing lamps to represent dead motors, broken rheostat grids and fouled controller sections. It shows in all cases the method of locating the difficulty on the cars and repairing or cutting out the same so as to reach home without assistance from the shops. The whole examination takes about 1½ hours.)

### Special Track Work, Etc., for Toronto Civic Railway.

The Toronto City Council has awarded contracts for the Lansdowne Ave. car line to the United States Steel Products Co. as follows:

Double track branch-off for intersection of St. Clair Ave. and Lansdowne Ave., \$2,125. Diamond for intersection of Toronto Suburban and Toronto Civic Rys., \$789. Curved rail layout for Lansdowne Ave., \$1,328. Two 100-ft. centre radius right-hand cross-overs for Lansdowne Ave., near St. Clair Ave. and for Lansdowne Ave., near C.P.R., \$1,140 each.

For the Lansdowne Ave. line extension contracts were given the same company as follows:—Tie rods, 33c. each; tie plates, 28c. each.

## Rail and Track Dispute in St. John. New Brunswick.

Up to May 22 last, when the City of St. John, N. B., wished to make any change in grade, it was in the habit of requesting the St. John Ry. to make the necessary change in grade rails, the city then putting in the concrete base and pavement under an agreement which existed with the company, whereby a stated sum was to be paid to the city monthly, in advance, relieving the company of any liability regarding the repairing of streets. On April 6 the following resolution was moved by the City Commissioner of Public Works, and passed by the Common Council:—"Whenever the rails of the Saint John Ry. Co. are renewed for any purpose, it will be necessary for the company to replace them with grooved rails, and this council now approves of grooved rails to be adopted for use on city streets."

The Company's contention was that permission having been given to lay one kind of rail, in making repairs they had a perfect right to repair with the same type of rail as removed, i.e., that if a T rail had been laid under permission of the council, repairs could be made with T rails. This was opposed by the Commissioner of Public Works, and he also ordered the company to put in a concrete foundation. The company refused to put in grooved rails at the corner of Princess and Sydney Streets and the Commissioner of Public Works removed the rails. After considerable argument before the Commissioner of Public Works, and letters to and from the Mayor, the company and the city agreed to leave the matter to a stated case to be heard before the Supreme Court.

On June 2, the Commissioner of Public Works ordered the company to tear up its tracks and concrete base at the intersection of Union and Waterloo Streets and put in grooved rails, as he was altering the grade of the street from nothing to half an inch over a distance of about 120 ft. Representatives from the railway met the Common Council on that date at 4 p.m., and were promised consideration. On June 3, at 7 a.m., the Commissioner of Public Works tore up the company's tracks at the above mentioned intersection and, before the company could procure an injunction, placed a tar macadam pavement where the rails had been. An injunction was obtained at 5 p.m. on June 3, and is still in force.

The company, immediately following the action of the Commissioner of Public Works, and on receipt of the injunction, agreed to another stated case, and judgment was given that the company's contention was correct.

Subsequent to the occurrences outlined above the differences between the city and the company reached the courts in a new form. Under a recent decision the company was directed to bring its tracks to a level with the street paving, etc., and to put a permanent foundation under them, where the city was doing repaving work. Within the last month or so some repaving work has been in progress and differences have arisen, as to what should or should not have been done. Matters reached a climax, Sept. 6, when the city employees took up a section of the company's tracks on Main St., and filled the space with concrete. Commissioner Potts stated that the company had had ample time to bring these tracks up level with the street paving, and claimed to be justified in removing them. The company secured an injunction restraining the city from any further interference with the tracks and directing the restoration of them. The work of removal was stopped, but nothing was done

in the way of restoration of the tracks removed. Proceedings were taken against the Mayor and Commissioner Potts for not having obeyed the injunction, and the first hearing was given by Justice Grimmer, Sept. 18. A number of affidavits were put before the court, and some legal arguments were put forward, before an adjournment was made until Sept. 26.

## Edmonton Radial Railway Employees' Wages.

The employees of the Edmonton, Alberta, Radial Ry., on Sept. 5, adopted by vote a new wages agreement, as from Aug. 31, which is to be renewed from year to year, either side having power to give the other 30 days notice of a desire to change any of the conditions. The schedule of wages per hour is as follows: For conductors and motormen: First six months, 26c. Second six months, 28.5c. Commencing 2nd year, 32c. Commencing 3rd year and thereafter, 34c.

Car barns department: Electricians, painters, carpenters, machinists and fitters and blacksmiths shall be paid the recognized rate of wages as adopted by the City of Edmonton under the fair wage clause as amended Mar. 2, 1915.

Barn men and car repairers: First six months, 26c. Second six months, 28.5c. Commencing the 2nd year, 32c. Commencing 3rd year and thereafter, 34c. Experienced car repairers, 36c.

Car cleaners: Head car cleaners, 32c. Other car cleaners, 28.5c. Track greasers, 30c.

## Sherbrooke Railway and Power Company's Annual Report.

Following are extracts from the report for the year ended June 30:—

"The directors feel, that while results were not as good as anticipated, the shareholders are to be congratulated that, under the circumstances, the company has been able to hold its own. As a result of the war many manufacturers curtailed their operations, thus reducing the demand for power and this naturally affected the revenue from electric light and street railway departments. To make up for this reduction in revenue, your directors decided to purchase the lighting and power business of Waterville and Compton, together with certain rights in the Coaticook River Power Co. and an undeveloped water power and were also obliged to extend several lines to secure other contracts. As a result practically the whole of the power from the present development has been sold and will substantially increase the revenue when in operation. To cover financial requirements, however, your directors being of the opinion that this is not an opportune time for the sale of long term securities, have decided to authorize the issue of \$100,000 of 7% short term notes, payable in three, four or five years, at the option of the purchaser. As these notes will be absolutely secured by double the amount of the consolidated first mortgage bonds of the company, they will no doubt be fully subscribed for. These notes will be offered in the first place to the shareholders and bondholders of the company on terms which will undoubtedly meet with their approval.

"During the year Major D. R. McCuaig, D.S.O., a director of your company, who left for the front at the beginning of the war, was seriously wounded in the battle of Langemarck and is at present in a German military camp, and has almost recovered from his wounds. This summer, Major

N. C. Pilcher, General Manager of the company, accepted a responsible appointment with the 5th Royal Mounted Rifles and has gone abroad with his company. During his absence, J. H. Trimingham, General Superintendent of the company, will administer its affairs. Your directors desire to place on record their appreciation of the valuable and faithful services rendered by the officers and employees during a very trying period."

Assets.

## Calgary Municipal Railway Annual Report.

The report for the year ended June 30 shows that the City of Calgary, Alta., owns and operates 71.5 miles of track, computed as single track. Of this 15.5 miles is double track and 1 mile sidings and turnouts. The total cost of construction and equipment was \$2,240,227.93, or \$31,331.85 a mile. The employees number 272 and the aggregate salaries and wages paid for the year was \$277,894.17. The total number of cars operated was 99, of which 12 are without equipment, such as trailers and work cars. During the year, no passengers or employees were killed, but 5 passengers, 2 employees and 3 others were injured. Following are statistics for the year:—

Operating earnings	\$611,826.85
Operating expenses	428,797.18

Net earnings	\$183,029.67
Interest on deposits	13,660.87

Total income	\$196,690.54
Taxes	3,316.42
Rental, land and conduits	1,012.39
Interest on funded debt	106,359.48
Interest on floating debt	2,023.04
	<b>112,811.33</b>

Net income	\$ 83,879.21
Reserves and sinking fund charges	74,984.89

Surplus	\$ 8,894.32
Car earnings	\$593,437.28
Chartered cars	1,109.35
Freight	2,522.02
Sprinkling	4,961.51
	<b>\$602,030.16</b>

Advertising earnings	\$9,626.69
Post card sales	170.00
	<b>\$ 9,796.69</b>
Maintenance of way and structures	\$11,566.42
Maintenance of equipment	\$44,270.73
Transportation, hired power	\$92,816.22

Operation of cars .....	\$240,264.27
General expenses, etc. ....	\$ 39,879.21
Ratio of operating expenses to gross earnings .....	70.08%
Ratio of operating expenses and taxes to gross earnings .....	70.62%
Total car mileage .....	2,822,699
Total car hours .....	298,185
Fare passengers carried .....	14,073,273
Transfers .....	5,000,000
Average per revenue passenger .....	4.216c.
Average all passengers .....	3.058c.
Passenger earnings per car mile .....	21.328c.
Miscellaneous earnings per car mile .....	0.847c.
Total earnings per car hour .....	\$2.05
Operating expenses per car mile .....	15.191c.
Operating expenses and taxes per car mile .....	15.308c.
Operating expenses per car hour .....	\$1.43

### The Jitney Situation in Canada.

One feature of the jitney movement has brought considerable sums to the Red Cross funds in Canada. Private owners have loaned their cars for use to run from railway stations to golf grounds and summer resorts; from towns to the scene of garden parties, and in a few instances a regular service is given to make connection with electric car lines. In all these cases the total amount of the fares goes to the patriotic fund; the owners of the cars pay the bills, and some member of the car owner's family or friend runs the car. There are other so called jitney services in a considerable number of towns, competing with the railway town bus, and otherwise. Neither of these kinds of service, which are temporary, irregular and unlicensed, have any bearing on the organized and licensed jitney services in the cities.

In Toronto the jitney situation was not in any way complicated by the holding of the annual exhibition. A considerable number of the vehicles ran on routes to the exhibition and did a good business, but with the closing of the exhibition, the regular routes were resumed, and any extra vehicles that had been running dropped out. It is not definitely known how many jitneys are now actually in service, but there certainly are not so many as there were a month ago.

The Winnipeg city licensing committee took up, on Aug. 28, the question of the drawing up of a bylaw for the regulation of the traffic in that city, and met R. W. Craig, the legal representative of the Winnipeg General Jitney Despatch and other owners, to discuss its terms.

It was reported in Winnipeg, Sept. 14, that there were at that date 635 jitneys in operation in the city against over 800 about three months ago.

The Vancouver Chief of Police submitted suggestions for the amendment of the street traffic bylaw at a meeting of the City Council's Fire and Police Committee on Sept. 8. The suggested amendments are for the better protection of pedestrian traffic, which the Chief is of opinion is menaced by the changed and increased vehicle traffic since jitneys have appeared on the streets.

The Victoria, B. C., City Council failed at its August sitting to agree upon the terms of a bylaw to control jitney traffic, and decided, Sept. 4, to have the bylaw redrafted so as to give effect to some suggestions made by jitney owners.

Outside Toronto, Winnipeg and Victoria, the situation is apparently not under discussion in any way.

Statistical and other information gathered in the United States points to the conclusion that the average "jitney" driver stays in the business about 60 days, and that the highwater mark of the traffic in any city is reached in about five months. These facts seem to suggest, one United States paper points out, that the life of the movement is not going to be measured by the ultimate life of the cars put into the service, but rather by the number of the

drivers who can be induced to enter the service. It is pointed out that so long as the cars are in good condition and the cost of the upkeep at a minimum considerable apparent profits can be made, and that as soon as the overhead charges mount up the driver gets disgusted and disappears from the service, because the returns are not equal to the outgoings. This is found to be the experience even in Los Angeles, where restrictive regulations are practically nonexistent.

The City of Portland, Ore., grants licenses to operate jitneys at \$2 a month for a seven seated car and 25c. a month for every extra seat. The regulations provide among other things that the cars must operate on regular routes, and to provide for rush hour traffic must operate to the outer terminals between 6 and 8 a.m. and between 4.30 and 7.30 p.m. must operate as far as the corner terminals. The Oregon City Council proposes to charge jitneys operating from that city to Portland a prohibitory fee for a license.

### The Elimination of the Running Board From Toronto Railway Cars.

For several months the Toronto Ry. has been experimenting with various types of cars with a view to the elimination of the running board from open cars. In a report made to the city by B. J. Arnold, of Chicago, in 1912, cross seated cars were among the recommendations made. It is, however, not deemed practicable to adopt this system as, owing to the narrow devil strip in Toronto, the cars are about 12 ins. less in width than those on most of the other larger systems in Canada and the U. S. The main difficulty is in planning the seating layout of a car to meet the requirements, and three suggestions have been made. First, the cross seated centre aisle car, second, the cross over cross seated cars with half cross seats and half longitudinal seats with a zig-zag aisle, both of which were described and illustrated in Canadian Railway and Marine World for April, and third, the centre aisle car with a longitudinal seat on the inner side, and cross seats on the outer side. The first mentioned was considered impracticable on account of the narrow devil strip, and the second was considered bad practice chiefly on account of the interruption in the aisle caused by the cross over. Regarding the third suggestion, the Toronto Ry. has equipped one of its standard semi-convertible cars with cross seats on the outer side, the side which is open in the summer being closed, the only entrance being at the rear end, with exits at both front and rear. This car has been running under observation for some time, and the Ontario Railway and Municipal Board has obtained a report on it from J. C. Royce, Consulting Engineer, Toronto, and it is probable that when certain alterations are made, the design will be approved by the Board, and cars of this type gradually placed in service.

The experimental car has a longitudinal seat the full length of the car on the inner side, with accommodation for 19 persons, and 10 cross seats and two short longitudinal seats, on the outer side, with accommodation for 24 persons. The inside width of the car is 7¼ ft., divided as follows,—cross seats 33 ins., aisle 37 ins., longitudinal seat 17 ins. The total length of the car is 44 ft. 10 ins. The body is off-set on the trucks to the extent of about 2 ins. to compensate for the slightly increased width on one side, and to allow for a more perfect distribution of weight in a fully loaded car. In the report made to the Board it is suggested that the number of

cross seats be reduced to 9, thus allowing more space between the seats, and a few other alterations will probably be made in the dimensions before the plans are finally approved. The seating capacity of the proposed car is 42.

### The Electric Railway Accident at Queenston.

The charge against E. J. Dickson, Vice President and General Manager, International Ry., of criminal negligence in connection with the accident on the Niagara Falls Park and River Ry., at Queenston, Ont., July 7, when several persons were killed and a number injured, came before the local magistrate at St. Catharines, Ont., Sept. 2. After some of the evidence taken at the inquest was read, the magistrate stated, in dismissing the case, that the General Manager could not be held responsible for any negligence on the part of the crew of the car, or of the men in the car barns, as each division of the railway is operated under a separate executive head. All the evidence showed that all rules regarding safety had been complied with and the car had all the necessary equipment. The fact that there was no sand on the car, was not the fault of the General Manager. It is a set rule of the company, that sand shall be used. Regarding track construction and curves, he pointed out that plans and specifications of the road had been submitted to the Ontario Railway and Municipal Board, and no member of the Board, nor any one else had made any suggestions in regard to making any of the curves safer. The line had been operated for over 20 years without an accident, and the company was perhaps justified in thinking that an accident could not be possible at that point.

On Sept. 17, the case against S. Boyt, the motorman in charge of the car at the time of the accident, was heard before the magistrate at St. Catharines. The only witness heard was Jas. Milne, electrical and mechanical engineer in the City of Toronto service, who stated that he would have insisted on the use of sand both in descending and ascending the hill in question. He stated that he believed the cause of the accident was that some of the brake rods must have broken unknown to the motorman, as he had found one of the brake rods with a clean break in it. In such case, the use of sand would have been unavailing. In the face of this evidence, the magistrate held that it could not be contended that the accident was due to the neglect of the motorman, and the charge was dismissed.

### Regina Municipal Railway Earnings, Etc.

Operating results for July, compared with those for July, 1914, are as follows:—

	1915.	1914
Revenue .....	\$15,887.44	\$23,177.00
Operating expenses .....	15,918.87	19,821.00
Capital charges .....	9,137.53	7,476.52
Deficit .....	8,268.96	4,120.52
Expenses per car mile ...	11.12c.	16.45c.
(excluding power)		
Expenses per car mile ...	18.37c.	21.42c.
(including power)		
Power per k.w.h. ....	2.05c.	2.00c.
Platform wages per car hour .....	75.97c.	81.26c.
Expenses per cent. of earnings less capital charges .....	94.53	
Expenses per cent. of earnings with capital charges .....	152.95	

London & Port Stanley Ry. Traffic.—A London, Ont. press dispatch says that arrangements have been made between the L. & P. S. Ry. and the Wabash Rd., for an interchange of freight and passenger traffic.

# British Columbia Electric Railway Employees' Wages Arbitrated and Reduced.

A new agreement as to wages and working conditions between the British Columbia Electric Ry. and its employees which was signed Sept. 4, is to run until six months after the cessation of the present war in Europe, with a minimum period of duration of six and a maximum period of 22 months. The basis of the agreement is the majority award of the arbitration board, made Aug. 2, which was accepted in its entirety by the company, with certain modifications subsequently made as a result of mediation of H. H. Stevens, M. P., and Dominion Fair Wage Officer McNiven.

The arbitration court consisted of Mr. Justice McDonald, chairman, appointed by the Dominion Government; A. C. McCandless, representing the company, and J. H. McVety representing the men. The board began its sittings July 19, and continued them from time to time until Aug. 13, the case for the company being put forward by W. G. Murrin, General Superintendent, and W. Saville, Chief Clerk, the men's case being presented by F. A. Hoover and W. Gates. The company desired to put in force a new schedule of wages making a reduction of 15% from that previously in force, upon the following grounds:—1. General business depression existing throughout the company's territory, which had led to an almost universal reduction of wages; 2. That the financial position of the company, owing to decreased business, made it unable to continue the old wage rate; 3. That if the rate of wages was determined by the cost of living, such cost had decreased since the last wage agreement was signed in 1913; 4. That the wages paid by the company were, in general, higher than those paid by other street railways; 5. That the wages paid had advanced 8% since 1913, because of the sliding scale, this increase coming in the face of decreased business; and in a general way the company argued that the rate of wages should depend upon the supply of and the demand for labor. The men submitted that there should not be any reduction, claiming that the wage scale which had prevailed could not be designated a living wage; that through the time of prosperity the wages should have been higher, and that the cost of living had increased since 1913.

The majority report, signed by the chairman and A. C. McCandless, goes fully into the questions coming before the board, and the evidence given upon them, and concludes as follows:—"The majority of the board feel satisfied that for the reasons stated we are warranted in recommending the adoption by the parties interested, of the agreement enclosed herewith containing reductions as shown by the wage schedule. After due consideration we trust that it will be deemed satisfactory to both sides. In the working conditions, the seniority clause remains intact. This protection, when coupled with efficiency, creates permanency of employment, more especially to those who, by length of service, have secured to themselves an advantageous position under this privilege. It appeared to us of even greater benefit at this time, when so many men are waiting to fill any vacancies that might exist in the service of the company. In fixing a rate of wages, we have not attempted to capitalize in dollars and cents the concessions above referred to, but have not overlooked their consideration. They have in the past, and doubtless will in the future weigh considerably with the employees, especially those having families dependent upon them. We have also, in making our recommendations,

borne in mind the permanency of employment that will be guaranteed to the employees by the execution of an agreement covering a definite period. In fixing the time during which we recommend the agreement to exist, we thought it well that it should expire within the same period of time as the current agreement. Various changes in the working conditions of the existing agreement were advocated by both sides. The 'seniority clause' was vigorously attacked by the company, and it was strongly contended that its operation interfered with the proper carrying on of the work, especially in the shop and barn department. This point was fully considered before the last board, and we see no reason to interfere with the decision then arrived at. The company then, as now, submitted that the practice infringed upon the principle of control that should be usually exercised, untrammelled, by the employer. What the company doubtless desired, was good results from the workmen. For that purpose, in order to safeguard the company, a clause was inserted and still remains, providing that the company has the absolute right of dismissal in case of inefficiency. The other matters in the working conditions considered were not of vital importance. We suggest some changes, but in the main we deem it advisable not to interfere to any extent with the arrangements that had already been in force between the parties for a lengthy period with little apparent friction. The Board unanimously recommends the adoption of the working conditions as changed."

The following is the wage schedule attached:—City and interurban lines, motormen and conductors shall receive per hour:

First year .....	26c
Second year .....	27½c
Third year .....	29c
Fourth year .....	30½c
After fourth year .....	32c

Motormen and conductors in work train service shall receive 1½c an hour in addition to the above rates.

[Editor's note: The previous wage scale for motormen and conductors on city lines was, per hour:

First year .....	27c
Second year .....	29c
Third year .....	31c
Fourth year .....	33c
After fourth year .....	35c

The reduction noted by a comparison of the old and new scale in this field of work runs, in general, throughout the entire revised scale.]

On interurban lines, being District 1, New Westminster, (Central Park) line, District 4, New Westminster (Burnaby Lake) line, and also on Saanich line per hour:

First year .....	27½c
Second year .....	29c
Third year .....	30½c
Fourth year .....	32c
After fourth year .....	33½c

Brake men, trolley men and baggagemen on these lines shall receive per hour:

For the first six months .....	25c
For the second six months .....	26c
For the second year .....	26½c
For the third year .....	27½c
For the fourth year and after .....	28½c

Shop and barn wages:

Car cleaners .....	25c
Motor car repairers, armature winders, helpers, blacksmith helpers, carpenters helpers, machinists' helpers and sawyers, per hour:	
First year .....	26c
Second year .....	27½c
Third year .....	29c
Fourth year .....	30½c
After fourth year .....	32c
Freight car repairers .....	28c

Freight car repairers' helpers .....	25c
Freight car inspectors .....	30c
Painters .....	39c
Freight car and rough painters .....	29½c
Brush hands .....	26c
Carpenters .....	39c
Freight car carpenters .....	33c
Machinists .....	42½c
Babbiter .....	33½c
Trolley retriever repairer .....	35c
Blacksmiths .....	42½c
Car wire men .....	38c
Air brake fitters .....	38c
Armature winders, 1st class .....	42c
Armature winders, 2nd class .....	40c
Armature winders, 3rd class .....	38c

Leading hands, while so acting, to receive beyond regular pay, 3c extra per hour.

Apprentices:

First year .....	15c
Second year .....	18c
Third year .....	22c
Fourth year .....	27c

Freight shed department:

Checkers .....	28c
Truckers .....	26c

Maintenance of way men:

First nine months .....	24c
After nine months .....	25c
Track greasers .....	25c

Blacksmiths, same rate as shop blacksmiths.

Motormen:

First year .....	28½c
Second year .....	30c
Third year and after .....	31½c

Employees paid monthly, per month:

House light troublemen .....	\$87.50
Assistant house light troublemen .....	60.00
Baggage room men (Vancouver) .....	78.00
do., (New Westminster) .....	65.00
Teamsters .....	62.50
Interlocking tower men .....	60.00

The men's representative, J. H. McVety, submitted a minority report in which he gives reasons for dissenting from the majority report; and states why, in his opinion, the company's contentions should not be accepted, and concludes by recommending the continuance of the old agreement.

Between Aug. 26 and 29, meetings of the employees' unions in Vancouver, New Westminster and Victoria were held, at which the award was discussed and a ballot was taken Aug. 30, at which a large majority of the men voted against the acceptance of the majority report. On the following day a committee representing the men, waited on George Kidd, General Manager, and asked whether the company would put forward any concessions, so that they might be considered when the report on the ballot was made to the men. Mr. Kidd stated that the company had decided to accept the majority report in its entirety, and would not consider any concessions. Communications were then opened by the men with the officers of the International organization at Detroit, and it is said that they refused to lend the necessary endorsement and financial aid, without which a strike could not be declared and carried on.

On Aug. 31, the company's General Manager sent a letter to each employee, in which he said: "The award of the majority of the board is anything but satisfactory to the company, as we contended, and still contend, that we are entitled to a reduction of 15% on our total wage bill, and also to considerable relief from the onerous working conditions contained in the agreement which has now expired. Instead of obtaining the relief for which the company asked a reduction of about 8% on its total wage bill has been recommended, and the working conditions are practically unaltered. Under these circumstances the company would be justified in refusing to accept the award. Bearing in mind, however, the conditions prevailing in the province, and fully realizing the necessity of avoiding any trouble

which might still further prejudice the business interests and general welfare of the community, the company has decided to accept the recommendations of the majority of the board. The board recommended that the new wages schedule and working conditions should take effect on Sept. 1. Realizing, however, that the company has only today notified your committee of its intention to accept the award, it has been decided to continue the existing wages schedule and working conditions for one week. Should you finally decide not to accept service on the terms laid down by the majority of the board, which will, therefore, come into effect on Sept. 8, your decision will be received by the company with great regret, as we much prefer employees who have been for many years upon our pay rolls to continue the operation of our system. At the same time your decision will not in any way affect the company's intention of adhering literally to the terms of the recommendation signed by the majority of the board.

"In the event of your refusing to continue the performance of your duties, the following course will be pursued by the company: Forty-eight hours will be given you in which to reconsider your decision. If during this time you should present yourself for duty, your services will be accepted at the rate and under the conditions laid down by the board of conciliation, but should you not during this time be willing to accept service, your name will be erased from the company's books. In the event of your deciding to leave our employ, you will be instructed to hand in, within 48 hours referred to, your badge, pass, punch, change-fund and any equipment which may be the property of the company. All seniority rights will expire within 48 hours of your failure to appear for duty, and any man afterwards engaged to carry on the company's service will have a seniority standing dating from the acceptance of his application. All men so engaged will be treated as first-year men and paid accordingly. The company has arranged, as far as possible, to pay to all employees who present themselves within the 48 hours, for the purpose of returning their equipment, all moneys which may be due to them.

"I place these matters before you clearly so that you may, before taking any steps which you may afterwards regret, have no excuse for saying that you did not understand the true facts of the case, or the true intention of the company concerning this matter, and although, as I have said, the company much prefers, for the sake of peace, to operate under the award with its old employees, yet it cannot and will not under any circumstances deviate from the conditions herein described to you."

The men met at their several centres at midnight, Sept. 1, at which the employees' committee presented a report, which it is said stated that the international executive refused to endorse a strike, mainly on account of adverse industrial conditions prevailing in Western Canada, due to trade depression and the effect of the war; and that while the executive sympathized with the men, they could only advise that the majority award be accepted under protest. The committee further reported that during the day the company had consented to certain amendments being made in the majority award. These consisted in making the agreement to run for a minimum period of 12 months and a maximum period of 22 months; and providing that employees should become and remain members of the union. The fact, however, that an employee ceases to be a member of the union does not, the understanding is, entitle its executive to demand

that he be dismissed from the service. In such cases the General Manager shall give a decision on the point, and if this is not considered satisfactory the matter shall be settled by arbitration. The meeting adjourned without ordering a strike, and on Sept. 3, a ballot was taken, when the majority report as amended was adopted, and the agreement was signed Sept. 1.

### Calgary Municipal Railway Results.

In the annual report of the City of Calgary, Alta., for 1914, the Commissioners state that the street railway department has suffered more from financial conditions than any other of the city's departments, the earnings having decreased considerably as compared with former years. The operating and overhead charges were reduced to a minimum, with the result that passengers are being carried at as low a rate, or lower than in any other Canadian city, length of haul being considered. The auditors report that the Superintendent of the railway, T. H. McCauley, had long urged that the depreciation charged against the railway was excessive, and after a consultation and examination, a few unimportant adjustments were made in the rates, some being made fractionally lower and some fractionally higher. The rate which had been fixed for track and road way at  $7\frac{1}{2}\%$ , was reduced to  $5\%$ , but only temporarily, in view of the greatly diminished traffic and resulting wear and tear, but it was stipulated that as soon as the traffic increases, the rate is to revert to the old figure. The rate fixed for depreciation on the power plant machinery was also reduced from  $7\frac{1}{2}\%$  to  $6\%$ , as it is not being used to its full capacity, and the same stipulation was made in this case. The reduction in the depreciation rate on track and roadway resulted in a saving of approximately \$27,000, and on the power plant machinery, of over \$11,000, while reducing the cost of the current to the railway permitted a refund to the railway on the cost of its power, of \$9,383.26.

The balance sheet of the street railway department for the year shows total assets of \$2,404,281.26, with liabilities of \$2,325,429.12, the net revenue account showing a credit balance of \$78,852.14.

### Quebec Railway, Light, Heat and Power Company's Annual Meeting.

The annual meeting was held at Montreal, Sept. 14, when the report for the year ended June 30, showed a total revenue of \$1,784,074, an increase of \$17,076; operating and maintenance expenses \$465,817, an increase of \$11,715; fixed charges and taxes \$735,482, leaving a net surplus of \$114,775, which added to the surplus brought forward from the previous year, makes a total available surplus of \$347,444.45.

The President, Sir Rodolphe Forget, stated that an announcement would be made shortly thereafter regarding the sale of a section of the Quebec and Saguenay Ry., which has been a heavy loss to the company.

The retiring directors were re-elected and five new ones were added, as follows:—President, Sir Rodolphe Forget; Vice President, L. C. Webster; other directors, D. O. Lesperance, J. N. Greenshields, Hon. Robert Mackay, P. Galibert, L. J. Tarte, A. Berthiaume, A. Terement, T. Bastien and L. Morin.

### Answers to Questions on Electric Railway Topics.

Following are questions submitted to the American Electric Railway Association's question box, with replies thereto by W. F. Graves, Chief Engineer, Montreal Tramways Co.:—

Will any member company having a large number of plans to care for, both of its own and of foreign make, which has perfected a system of filing and indexing the same, briefly describe the system and method of keeping it up?

In our system of filing drawings, the foreign prints are kept separate from our own drawings, the foreign prints having a consecutive number given to them and catalogued under the title of the drawing by means of a card system. Our own drawings are divided into different classes, such as Intersections, Right of Way, Cars, etc., and each class is given a distinguishing letter A, B, C, etc., corresponding to the drawer letter; drawers A, B, C, etc., are then divided into different sizes, and the record of these drawings is kept in a loose leaf book, numbered consecutively under the class heading, and also in a card index under the title of the drawing, thus—Intersection—St. James & McGill would be numbered 160 N. F., which would indicate that it was in drawer N and the size of the drawing was 17 x 33 ins., while drawing of Track Bolts numbered 160 L. D. would indicate that it was in drawer L and the size of the drawing was  $8\frac{1}{2}$  x 11 ins.

Standard Drawing	Reduced Drawing
$8\frac{1}{2}$ x 11 ins. = D	11 ins. Wide = J
11 x 17 ins. = C	17 ins. Wide = K
17 x 22 ins. = B	22 ins. Wide = L
22 x 34 ins. = A	33 ins. Wide = M
17 x 33 ins. = F	44 ins. Wide = N

To what extent is salt used in connection with keeping the track clear during snow storms or immediately afterwards? Is its use confined mostly to special work, or is it used upon the straight track?

Our average snow fall during the winter is 120 ins., resulting in the use of large quantities of salt, principally around switches and curves. During severe snow and freezing weather, we use salt at the approaches to intersections, also use salt and sand mixed, applied by hand, on important hills, of which we have a number on this property. In a milder climate, I have used salt brine, ranging from a saturate solution up, according to the temperature, and applied from barrels at the special work.

Does it pay to inspect manufacturers' special work?

My opinion is that it is essential that special work be inspected at the manufacturers. The amount of money involved in making such an inspection is small compared with the expense of the layout.

What is the best foundation for special work, crushed stone or concrete?

Crushed stone, owing to its resiliency, facilities for drainage, ease of resurfacing and repairing, is the best foundation for special work.

Does the track well ballasted with crushed stone require a longitudinal drain pipe?

In an impermeable clay soil, a farm tile drain should be installed, either in the centre between tracks or in the track space and the excavation sloped toward such drain, which should be connected with the sewer at some place, whether the track foundation be concrete or stone.

In large construction work, is it more economical to contract car house wiring or should the railway company do the work?

In my opinion, the railway company should do its own wiring in and about car houses.

This may not, in instances, be the most economical procedure, but my experience is that it is the most satisfactory in the end.

In cases where trolley troughing is used on steel girders, and hangers are rigidly fastened to the troughing, what satis-

factory methods have been employed to deaden the noise?

The placing of stripped felt about ¼ in. thick, or of asbestos fibre, between the trolley board and the structure, tends to deaden the noise of passing cars.

## Electric Railway Projects, Construction, Betterments, Etc.

**Brandon Municipal Ry.**—A press report states that the Percy St. extension was placed in operation Sept. 1, and that material is on hand for a further extension along College Ave. and 18th St. (Aug., pg. 318.)

**British Columbia Electric Ry.**—The New Westminster City Council passed a resolution, Sept. 1, calling on the company to carry on permanent work on a number of streets in the city. (Aug., pg. 318.)

**Edmonton Radial Ry.**—An arrangement is reported to have been concluded between the Edmonton, Alberta, City Council, and the Interurban Ry. for the operation by the Edmonton Radial Ry. of the Interurban Ry. line from the city limits to West Edmonton or, as it is sometimes called, Calder. The Interurban Ry. extends from the city limits to St. Albert, and has not been operated since its gasoline car was burned. The West Edmonton residents desired to have a service and the present arrangement is said to be for the electrifying of the line to that suburb, the material for which the city has on hand in its railway stores, and the operation of the piece of line as a part of the city lines. No rental is to be paid for the use of the line until operating expenses are met, after which the surplus is to be paid to the Interurban Ry. until 8% on the ascertained cost of construction has been paid, and all subsequent earnings are to go to the Edmonton Radial Ry. The agreement will run for five years. (Sept., pg. 359.)

**Hydro Electric Power Commission of Ontario.**—The Ontario Municipal Association at its annual meeting in Toronto, Sept. 2, listened to an address by Chief Engineer Gaby, of the Commission, upon the construction of electric railways by municipalities under the Commission's general control. He stated that within a few weeks reports would be ready for presentation to the various municipalities interested, showing the estimated cost of a network of electric railways throughout the western portion of the Province. The engineers' reports upon which the general report was based, had been received, covering about 300 municipalities and representing about 1,600 miles of line, in the districts from Whitby in the east to Sarnia in the west, including the county of Huron, and the arm from the Niagara Peninsula northerly to Georgian Bay. The reports would show the estimated cost of construction for the highest standard of road and equipment, and the general statistical tables would show the estimated traffic.

A committee of the Windsor, Ont., City Council, acting in conjunction with the Hydro Electric Power Commission of Ontario, is considering the electric railway situation in the city and vicinity, and it was reported, Sept. 9, that the question of the purchase of the Sandwich, Windsor and Amherstburg Ry. by the city and the other municipalities interested would be considered. (Sept., pg. 359.)

**Lethbridge Municipal Ry.**—The Lethbridge, Alberta, City Commissioners have decided to lay over for the present the proposal to extend the municipal railway to Hardieville. The proposed extension would be two miles long, and it was suggested that some of the second track in the city might be taken up and laid to Hardieville.

**Moncton Tramways, Electricity and Gas Co.**—We are officially advised that the company is laying a double track line through the new subway on Main St., under the Intercolonial Ry., 300 ft. The special work for this double track has been ordered from Canadian Steel Foundries Ltd. (July, pg. 277.)

**Montreal Tramways Co.**—We are officially advised that the company has laid two miles of new track, and has reconstructed about 15 miles of single track on various streets. It is contemplating the reconstruction of an additional three miles on various streets. It has placed an order in the U. S. for 1,500 tons of 115-462 girder rail.

The City Engineer of Montreal is reported to have said, Sept. 10, that there were a number of streets in the city upon which repairs to the roadbed were urgently needed, but to which nothing could be done because the M. T. Co. would not put its tracks in proper condition. The streets referred to include Notre Dame St., between St. Francois Xavier and Berri Sts. (July, pg. 277.)

**Peterborough Radial Ry.**—We are officially advised that the reconstruction of track on Charlotte, Park and George Streets, rendered necessary by the city paving, is expected to be completed during October. All the material has been ordered. (July, pg. 277.)

**Quebec Ry., Light and Power Co.**—A press report states that the station building on the Champlain Market site, at Quebec, together with the line built there via Sillery to the Quebec Bridge, are likely to be sold by the Dominion Government, to the Q. R., L. and P. Co., and that the line will be electrified. (July, pg. 278.)

**Sandwich, Windsor and Amherstburg Ry.**—The terms of a franchise proposed to be given to the company, or its subsidiary, the Windsor and Tecumseh Electric Ry., for the construction of a belt line in Walkerville, Ont., will, it was reported, Sept. 16, be submitted to the ratepayers for a vote at an early date. (July, pg. 277.)

**Three Rivers Traction Co.**—We are officially advised that track has been laid on streets in Three Rivers, for 3.5 miles. The overhead work is being put up, and a car barn is in process of construction. It is expected to put this line in operation before the end of the year. Very little progress has been made in respect of the suburban line owing to the terms which the municipality asks for a franchise. (June, pg. 229.)

**Transcona, Man.**—The town council has granted a 25 years exclusive franchise, renewable for five years, and at the end of every five years thereafter, reserving to itself the right to take over the line, on terms to be fixed by the Public Utilities Commission. The franchise requires that work be started immediately, the line to the Winnipeg city boundary to be completed first, and the whole of the lines set out in the schedule to be completed within two years. H. W. Adcock, of Winnipeg, who has the charter, states that he proposes to form a company and that he will apply for a Dominion charter of incorporation for the Winnipeg Interurban Ry. Co. (Aug., pg. 319.)

## Electric Railway Finance, Meetings, Etc.

**Brantford Municipal Ry.**—Details accompanying the report of the Commissioners, a summary of which was given in Canadian Railway and Marine World for September, on pg. 358, were presented to the City Council, Sept. 1. The accounts were for six months ended June 30. Of the total earnings of \$42,505.79, the line in the city earned \$20,943.81, and the Grand Valley Ry. \$21,561.98, the operating expenses being \$18,290.04 and \$15,931.85 respectively. During the six months the car mileage run was 123,180 on the Brantford lines, and 82,663 on the G.V.R.

### Cape Breton Electric Co.

	July 1, 1914	July 1, 1914	July 1, 1914	July 1, 1914
	to	to	to	to
	June 1915	June 1914	June 30, 1915	June 30, 1913
Gross earnings	\$27,832.40	\$29,696.95	\$155,597.52	\$167,321.73
Expenses	17,856.21	17,595.13	98,111.36	101,063.51
Net earnings	9,976.19	12,101.82	57,486.16	66,318.22

**Halifax Electric Tramway Co.**—The total earnings for 1914 were \$645,241 against \$605,933 for the previous year. The earnings for the street railway alone were \$319,880 in 1914 and \$301,771 in 1913. The operating expenses and taxes were \$375,123 against \$337,010, and the bond interest was \$30,000 in each year. The net earnings were \$239,818 in 1914 as against \$238,924 in the previous year. During 1914, 7,316,727 passengers were carried, the car mileage being 1,370,430, against 6,876,003 passengers carried, with a car mileage of 1,275,527 in 1913. The capital expenditures in 1914 were \$41,864, and amounts paid in dividends, \$112,000.

### London St. Ry.

	Aug., 1915	Aug., 1914	Jan. 1 to Aug. 31, 1915	Jan. 1 to Aug. 31, 1914
Gross earnings	\$34,273.14	\$37,084.89	\$2,732.17	\$249,048.47
Expenses	28,985.67	24,295.97	182,215.31	177,570.61
Net earnings	10,337.47	12,788.92	75,113.86	71,477.73

**Montreal Tramways Co.**—Subscriptions will be received to October 25, from shareholders of record Sept. 10, for a new issue of common stock at par, in the proportion of one share for every three shares now held. Ten per cent. is to be paid on application, and the balance will be called up as required by the directors upon giving two months notice.

**Oshawa Ry.**—The annual meeting was held at Deseronto, Ont., Sept. 13. Following are the directors for the current year: President, E. W. Rathbun, Deseronto; Secretary-Treasurer, J. H. Valteau, Gananoque, Ont.; Manager, H. W. Cooper, Gananoque, Ont.; other directors, B. R. Hepburn and D. A. Valteau.

**Toronto Ry.**—The receipts from Jan. 1, and the percentages paid to the city, for 1915, compared with those for 1914, are as follows:

	1915	City percentage	1914	City percentage
Jan....	\$ 471,226	\$ 70.486	\$ 501,844	\$ 75.277
Feb....	440,314	67.047	461,274	72.060
Mar....	484,468	93.141	530,751	102.159
Apr....	467,702	93.540	501,435	100.287

	\$3,684,299	\$686,534	\$4,058,596	\$767,127

**Air compressor outfit for Toronto Civic Railway.**—Tenders were received recently for equipment for the Danforth Ave. car barn and the Commissioner of Works recommended that the Canadian Westinghouse Co.'s tender for an air compressor outfit set complete with motor, making enclosed unit, for \$763 be accepted. He said that it was not the lowest tender but that after careful consideration of the other machines tendered he was of opinion that the Westinghouse would give the best service. The Board of Control accepted the tender.

## Toronto Railway's Proposed Extension on North Yonge Street, Toronto.

The Ontario Railway and Municipal Board gave judgment, Sept. 11, on the application of the Toronto Ry. for permission to extend its tracks from the present terminus on Yonge St., through the subway under the C.P.R., to Farnham Ave., the terminus of the Toronto and York Radial Ry.'s Metropolitan Division. Until recently the greater portion of this piece of roadway was operated over by the Toronto and York Radial Ry., and the Toronto Ry. claims that on the expiry, on June 25, of the franchise under which the operation took place, it had the right to extend its tracks under the agreement with the city in 1891. Pending the settlement of this point, the Toronto Ry. offered to operate, or arrange for the operation of cars to make the connection between its line and its subsidiary, the T. & Y. R. R., but the city prevented such an arrangement being arrived at by removing the rails and overhead equipment, thus leaving passengers to walk between the two termini. One of the chief objections urged by the city against granting the company's application, was that the company had not kept its agreement with the city to obtain the approval of the City Engineer to the plans. The Commissioner of Works admitted having received the plans from the company, but stated that they were addressed "for the approval of the city," and had been sent to the Board of Control, and that therefore they had not formally been sent to the City Engineer for his approval.

In delivering judgment, D. M. McIntyre, K. C., Chairman of the Board, said:—"This objection is at best highly technical, and a somewhat refined attempt to defend what seems to the Board to be an intentional evasion by the City Engineer of his clear duty under the agreement. Here is a contract between the city and company extending in duration over a period of 30 years; it presupposes a genuine intention on the part of each of the contracting parties to co-operate in the elaboration of a street railway system in the City of Toronto and provides machinery and agencies for carrying out that intention, under it slightly over 120 miles of tracks have been constructed, plans of all of which have presumably, under the procedure fixed by paragraph 12, been submitted for his approval to the City Engineer and yet when plans proposing a further extension are submitted to him by the company he shuts his eyes to the plain and obvious meaning of the transaction and fastens upon a phrase in the covering letter as a pretext for evading his clear duty under the agreement. It thus appears that the Commissioner of Works chose to take his stand upon a verbal quibble, ignoring the clear intent and purpose of the company in the transaction and abdicating his functions as city engineer under paragraph 12. The Board finds as a fact that the plans of the extension of the Toronto Ry., showing the proposed position of the rails, the style of rail to be used and the other works in the portion of Yonge St. in question have been duly submitted to the City Engineer as required by paragraph 12 above set out, and that he, in breach of his duty in the premises has neglected to consider the said plans and to approve or otherwise deal with the same thereunder.

"A number of persons were present at the hearing whose testimony was taken. They included persons living in Toronto north of the C.P.R., and residents of County York. All concurred that the absence of railway communication on Yonge St. between the

northerly terminus of the applicant's railway and the southerly terminus of the Toronto and York Radial Ry. was the cause of great inconvenience to thousands of people. Estimates were given that from 10,000 to 15,000 people daily walked between these termini, those northbound being obliged to climb a steep hill. All witnesses concurred that the construction and operation of the proposed extension of the Toronto Ry. would furnish a needed means of transportation and greatly lessen the inconvenience now suffered daily by thousands of people. The members of the board and its engineers have by personal inspection obtained confirmation of the concurrent testimony above summarized. The board finds as a fact that the equipment, appliances and service of the Toronto Ry. in respect to the transportation of persons along the portion of Yonge St. shown on the plans filed are inadequate, and the board is of the opinion that the Toronto Ry. should be required to construct, maintain and operate an extension of its existing lines northerly on Yonge St. with facilities to Y at Woodlawn Ave., as shown on the plans filed, and the board will so order."

The Board on Sept. 21, issued the formal order directing the Toronto Ry. to extend its track from the present terminus on Yonge St., through the subway to Farnham Ave., the terminus of the Toronto and York Radial Ry., and to have cars running on this section by Dec. 1.

The City Board of Control announced its intention of appealing against the judgment and the Mayor stated recently that he considered steps should be taken to obtain legislation to remove the City of Toronto from the Ontario Railway and Municipal Board's jurisdiction. The appeal was heard by the Ontario Court of Appeal, Sept. 27, and was dismissed with costs.

### Electric Railway Notes.

Toronto Ry. employees at the front number 251, of whom 105 are married men.

Commissioner Harrison has recommended the Edmonton, Alberta, City Council to abandon the straight 5c. fare on the Edmonton Radial Ry., and restore the old rate of 6 tickets for 25c.

The Manitoba Public Utilities Commission has ordered the Winnipeg, Selkirk and Lake Winnipeg Ry. to build a shelter at McNaughton, and to provide platforms at the Old Folks' Home, Middlechurch, and at the stop at Murray.

Regina, Sask., ratepayers are being asked to vote on the question of stopping cars being operated on the municipal railway on Sundays. The Sunday cars are being operated at a loss, and it is desired to cut the loss in operation to a minimum by reducing the service on this one day.

All sorts of suggestions are being made to the Edmonton, Alberta, City Council with the object of increasing patronage on the Edmonton Radial Ry. One of the most recent ones is a proposal to allow storekeepers to give tickets as a premium to customers on bargain days. This could only be done by restoring the ticket system on the line.

The Toronto and York Radial Ry. discontinued the sale of commutation tickets of 30 trips between its Toronto terminus and Long Branch, New Toronto and the Humber, Sept. 6. In place of this series, the company is issuing tickets as follows,—

to stop 10, 8 for 25c., stop 25, 7 for 25c., and stop 29, 5 for 25c. In response to a deputation of Long Branch residents, who waited on the management, Sept. 14, it was stated that until the City of Toronto came to some arrangement with the company regarding the operation of the line to the Humber, the company could not enter into any agreement with Etobicoke Tp. respecting fares. The deputation desired the fixing of the rate for tickets at 6, instead of 5, for 25c.

### Mainly About Electric Railway People.

J. H. Moir is reported to have been appointed Traffic Manager, Edmonton Radial Ry., Edmonton, Alta.

A. G. Workman has been appointed Chief Dispatcher, British Columbia Electric Ry., New Westminster, B. C., vice T. G. Connon resigned.

M. E. Morton, Traffic Manager, Fort William Electric Ry., has been appointed by the Ontario Railway and Municipal Board as an official examiner of motormen.

H. W. Cooper, heretofore Secretary-Treasurer, Oshawa Ry., Gananoque, Ont., has been appointed Manager, vice J. F. Chapman deceased, and J. H. Valteau has been appointed Secretary-Treasurer.

A. K. Bunnell, City Treasurer of Brantford, Ont., and a member of the commission managing the Brantford Municipal Ry., was elected President of the Ontario Municipal Association, at the annual meeting in Toronto, Sept. 2.

W. J. Radford, heretofore Cashier, Toronto Suburban Ry., West Toronto, Ont., has been appointed Assistant Manager. Robert Gilbert, heretofore Assistant Manager and Purchasing Agent, has been appointed Purchasing Agent.

John Knox, Treasurer, Dominion Power and Transmission Co., which owns and operates the street railway at Hamilton, Ont., and the various radial railways in that district, died there, Aug. 31. He was a native of Scotland, and resided in Hamilton for 32 years.

J. H. Trimmingham, Superintendent of Power, Sherbrooke Railway and Power Co., Sherbrooke, Que., is acting as General Superintendent during the absence of Major N. C. Pilcher, General Manager, who has gone overseas with the 5th Canadian Mounted Rifles.

Several changes have been made in the Chatham, Wallaceburg and Lake Erie Ry.'s organization. W. Norris, heretofore General Manager, Chief Engineer and Purchasing Agent, is now General Superintendent. J. E. Richards, General Freight and Passenger Agent, has resigned, and A. C. Johnstone has been appointed Accountant.

William John Radford, who has been appointed Assistant to General Manager, Toronto Suburban Ry., Toronto, was born at Boldre, Hants., England, Dec. 23, 1870, and entered railway service with the Great Southern and Western Ry. of Ireland, Jan. 12, 1890, since when he has been, to Feb. 28, 1894, junior clerk, Goods Manager's Office, Dublin; Mar. 1, 1894, to Dec. 12, 1899, station agent, Carlow; Dec. 3, 1899, to May 29, 1902, station agent, Athy; May 30, 1902, to Aug. 13, 1903, station agent, Charleville; Aug. 14, 1903, to Sept. 1, 1904, station agent, Killarney; Sept. 2, 1904, to Dec. 31, 1905, chief staff clerk, General Manager's Office, Dublin; Jan. 1, 1906, to Feb. 28, 1907, English Agent, Liverpool; Mar. 1, 1907, to Aug. 31, 1913, District Agent and Harbor Master, Rosslare, Ireland; Mar. 4, 1913, to June 30, 1915, cashier and office assistant, Toronto Suburban Ry., Toronto.

# Marine Department

## Loss of the s.s. Silver Wings.

The enquiry into the causes which led to the stranding and subsequent loss of the Wind Steamship Co.'s s.s. Silver Wings, on or near Sable Island, Aug. 17, was held at Halifax, N.S., recently, before Lieut.-Commander G. Holloway, R. N. R., acting Wreck Commissioner, assisted by Capts. N. Hall and D. C. Stewart as nautical assessors. Following is an abstract of the judgment:—

The court finds that the loss was caused by the stranding on or about the western end of Sable Island during thick weather. The Silver Wings left New York Aug. 14, with rails, etc., in holds, and two tiers on decks bound for Archangel, Russia. The master did not have his compasses adjusted to ascertain if the steel rails had affected them. From the evidence, even when he had cleared, the weather was clear enough to have swung his ship but he only obtained the deviation on his then course being steered, and again on the afternoon of Aug. 14 he obtained the deviation and on the morning of Aug. 15. Though by the evidence given, he had plenty of time after the stranding to save his deviation book, scrap log book and chart he was working with, they were not produced in court. As the master or mate were unable to inform the court what deviation they had on easterly courses before loading rails the court is unable to state if the compasses had been affected by the carrying of steel rails on deck.

After shaping course on leaving Ambrose light vessel to the time of stranding the weather appears to have been thick with a few clears, yet no soundings were taken, though the ship was constantly in soundings, and even though he steered to pass Fire Island vessel and Nantucket light vessel he did not hear the fog whistle, and changed his course without sounding. The master stated he used the small scale chart of the North Atlantic western portion. At the court he was given a large scale chart and asked to lay down his courses and distances from the data given in the log book. When these were plotted off, instead of taking the ship 45 miles to s. e. of Sable Island, his position placed the ship as really heading for Sable Island at 8 p.m. on Aug. 17, 3½ hours before she stranded, and again at 9 p.m. the ship was hauled to the southward some two points. The master was asked by the court what these manoeuvres were for and stated "I altered because I had so much fog and had read so much of steamers bound from New York to Archangel ramming fishermen. The court on laying down the course as shown by the log book and in applying the correct variation, places the position of the ship some 60 miles to the north and west of stranding position.

The court is unable to understand why he should deem it advisable to haul out twice in the course of one hour to go to the southward of Virgin Rocks, some 400 to 500 miles off. The master gave his evidence clearly and was obviously a man of ability, and the court can only conclude from the evidence given and the log book, that the master laid his first course in error and from then on shaped his course without referring to the chart, otherwise he must have seen his course took him 15 miles inside Nantucket light-vessel instead of to the south. It has not been made plain upon what method of navigation the master was working, as his assumed position and position as shown by

courses laid in the chart are contradictory. We find the master in default for not using the lead and for reckless navigation and therefore suspend his certificate for one year from Aug. 30, but recommend that he be granted a mate's certificate during the period under suspension. The mate, Thomas Jones, kept his log in a very slack manner, only the compass course being shown; he also, from his evidence, showed he took not the slightest interest in the navigation and took over his watch without checking off the ship's position, and we find him in default for not realizing the responsibility of his position as mate and therefore suspend his master's certificate for three months, from Aug. 30, to Nov. 30, without the option of a lower grade certificate being issued.

The court feel called upon to comment upon the following facts: the Silver Wings left the United Kingdom with only the master and mate holding certificates. When the second mate left, shortly before the ship sailed, the boatswain was made chief boatswain, (the court does not realize what this term implies), and kept watch. The owners, according to the master's evidence, did not detain the ship for even a day to endeavor to obtain a second mate nor did they send a man out as passenger to catch the ship in New York. The court hazards the opinion that if the two officers had been carried, at least one of them would have realized that his position carried great responsibility and he was not put on the bridge as a figure head, but the court must point out that legally, for her tonnage, she had the full complement and the master and mate are alone to blame. The court finds that the type of log book as kept on the Silver Wings is not of a class to make the proper entries of ordinary navigation and would recommend that uniform log books be issued by steamship owners where by proper entries would be made.

## The Allan Line s.s. Hesperian Sunk.

The Allan Line s. s. Hesperian was struck, supposedly by a torpedo from a German submarine, Sept. 4, while outward bound from Liverpool, Eng., for Montreal. The passengers and a majority of the crew were removed, and an effort was made to tow her to Queenstown, Ireland, but she sank on Sept. 6. The loss of life has been given as 32, of whom 22 belonged to the crew.

The Hesperian was built at Glasgow, Scotland, and launched at the end of 1907. She was a sister vessel of the same company's s. s. Grampian, and was built to the highest class of the British Corporation for the Survey and Registry of Shipping, on the cellular double bottom principle, and specially strengthened for North Atlantic service. There was passenger accommodation for 500 first and second class passengers and for 1,400 third class passengers, the latter in four berth cabins. All the rooms were tastefully decorated, large dining rooms and music rooms being provided for each class. Electric light was supplied from duplicate plants, so that lighting was assured, and the thermo-tank system of heating and ventilation was installed. She was equipped with a double set of triple expansion engines supplied with steam by boilers operated under forced draught. Her dimensions were, length 502 ft., breadth 60 ft., depth to shelter deck 41½ ft., gross register tonnage about 10,000. She was placed

in service on the opening of the St. Lawrence navigation season of 1908, running between Glasgow and Montreal, completing the run within seven days.

## Navigation Aids on the Great Lakes and River St. Lawrence.

All Canadian lights and fog alarms on Lake Superior will be kept in operation this autumn until the close of navigation, with the exception of those at Caribou Island, Otter Island, Michipicoten Island east end, Gargantau, Michipicoten harbor, Corbeil Point and Ile Parisienne, from which stations the keepers may be removed at any time after Dec. 1. Mariners must not rely on finding any of these lights in operation after that date.

All Canadian lights and fog alarms on Lake Huron, Georgian Bay, Lake St. Clair, Lake Erie, Lake Ontario and connecting waters, will be kept in operation until the close of navigation, excepting the southeast shoal lightship, Lake Erie, which may be forced to abandon her station by ice conditions before the general close of navigation, and also Lonely Island light, Georgian Bay, which may be closed before the general close of navigation.

All Canadian lights on the River St. Lawrence will be kept in operation until the close of navigation. All gas buoys and other floating aids to navigation will be kept as long as ice conditions will permit, and in cases where it is necessary to remove gas buoys before the close of navigation, spar markers will be laid down if possible.

Lightkeepers and mariners will govern themselves accordingly. Lightkeepers are also cautioned to maintain their lights and fog alarms in operation until navigation shall have completely closed, and they are required to satisfy themselves that it has before closing their stations. The keepers of the stations named above will maintain their lights until called for by the Marine Department's steamship.

**Shipping Grain Overseas.**—It was announced in Ottawa, Sept. 22, that the Dominion Government had appointed a sub-committee under the Minister of Trade and Commerce, to deal with the question of shipping grain from Canada. W. Sanford Evans, Secretary of the committee, after enquiring into the situation at Montreal, is reported to have stated on Sept. 21 there were 33 ocean going vessels loading, ready to load, or waiting cargoes there. According to present indications there should be no congestion at Atlantic ports for some time to come, and probably not at all during the winter. Great Britain requires about 12,000,000 bush. a month, and if it can be arranged that the crop be marketed gradually, without rushing, the transportation question can be satisfactorily dealt with.

**Suspension of Coasting Laws.**—There have been persistent rumors for some weeks past that the Dominion Government would suspend the coasting laws so as to permit United States vessels to carry grain from Fort William and Port Arthur to other Canadian ports, a privilege which Canadian vessels have never been given between U.S. ports. Our advices from Ottawa up to September 23 are to the effect that the Government has no such intention.

## Mainly About Marine People.

**Capt. Walsh**, Marine Superintendent, Atlantic Steamships, C.P.R., addressed the Sailors' Club, Montreal, recently, on the responsible part played in the war by the mercantile marine.

**W. G. Ross**, Chairman, Montreal Harbor Commissioners, was elected First Vice President of the American Association of Port Authorities, at the association's annual convention at Los Angeles, Cal., recently.

**Capt. H. I. Matthews**, who died at Colborne, Ont., Sept. 16, after an illness lasting several weeks, was formerly a master mariner on the Great Lakes, but had not been intimately associated with lake transportation for 30 years.

**Lieutenant-Engineer A. Gordon**, formerly a chief engineer on one of the vessels of the C.P.R. British Columbia Service, is reported to have been awarded the Russian Imperial Order of St. Anne, third class, for services on H. M. S. Jupiter, while engaged on the White Sea.

**James Carruthers**, President, Canada Steamship Lines Ltd., has contributed \$100,000 to the Military Hospitals Commission Disablement Fund, for the supplementing of pensions granted by the Government where these are deemed to be insufficient, and for special purposes.

**Capt. John Manson**, keeper of the Colchester Reef lighthouse in Lake Erie for the last 26 years, died at Amherstburg, Sept. 20, aged 75. He was engaged on sailing vessels for a number of years, and prior to being given charge of the lighthouse, was on the old lightship Dunscomb, stationed at Bar Point.

**Wm. McGuinness**, heretofore in the Liverpool, Eng., office of Allan Bros. and Co. of United Kingdom Ltd., has been appointed Manager of that company's office in Glasgow, Scotland, vice W. McK. Rodan, General Passenger Agent Allan Line Steamship Co., and Glasgow Manager Allan Bros. and Co. of U. K., who has returned to London, Eng.

**C. A. Jaques**, who was formerly interested in marine affairs, in connection with the Merchants Montreal Line, the C. A. Jaques Transportation Co., etc., has, in conjunction with A. M. and F. H. Jaques, incorporated Everyman's Car Co. Ltd., with \$40,000 capital and office at Ottawa, Ont., to manufacture and deal in motor cars and similar vehicles.

**R. A. Spawton** has not been appointed Purchasing Agent of the Marine & Fisheries Department at Halifax as reported in the daily press, and we are informed that no such appointment is contemplated. He has been a clerk at the Halifax agency for a number of years, and has been entrusted recently with purchasing such local supplies as the agency may require from time to time.

**Capt. P. M. Campbell**, who died at Collingwood, Ont., Sept. 10, aged 69, was a native of the Maritime Provinces, and had commanded vessels on the Great Lakes since the early sixties. He was one of the founders of the Georgian Bay Navigation Co., the name of which was changed in 1880 to Great Northern Transit Co. This company was amalgamated with the North Shore Navigation Co. in 1899, under the name of the Northern Navigation Co. of Ontario, and is now a subsidiary of Canada Steamship Lines Ltd. He was also one of the founders of the Collingwood Drydock Co., now the Collingwood Shipbuilding Co., of which he was a director at the time of his death. One of his sons, Capt. A. L. Campbell, is in command of the Northern Navigation Co.'s s. s. Huronic.

## Atlantic and Pacific Ocean Marine.

The contract for the repair of the s.s. Hendon Hall which was wrecked in Trinity Bay, in Nov., 1914, has been awarded to the Davie Shipbuilding Co., Levis, Que.

The s.s. Bengore Head, which was damaged in collision with the s.s. Batiscan, early in August, and taken to the Davie dry dock at St. Joseph de Levis for repairs, was finished and discharged from the dock, Sept. 9.

The U. S. s.s. Allaguasha, bound from Copenhagen, Denmark, for New York in ballast, put in at St. John's, Nfld., Sept. 12, for temporary repairs, after a collision with the Parrsboro, N.S., barque Ravenscourt, 20 miles from Cape Race, Sept. 10.

A steamship named Iceland, intended for the Newfoundland sealing industry, was launched in Scotland recently, and it is announced that she may be taken over by the Russian Government for ice-breaking service at Archangel, instead of crossing to Newfoundland.

The Allan Line s.s. Pretorian, which collided with the s.s. Kansan, off the mouth of the Saguenay River, in the St. Lawrence, Sept. 15, arrived at Montreal, Sept. 17, under her own steam. After discharging passengers, mails, etc., she was dry-docked for examination and repairs.

The France and Canada Steamship Co., Ltd., has been incorporated under the Dominion Companies Act with \$1,000,000 capital and office at Montreal, to carry on a general steamship business between Canada and France, and to own and operate steam and other vessels in connection therewith.

The Maskinonge Steamship Co., Ltd., and the Laurentian Steamship Co., Ltd., have been registered in Liverpool, England, to take over certain steamships from Bowring and Co., together with certain contracts between that firm and the Dominion Coal Co. The first named company has a capital of £20,000, and takes over the s.s. Maskinonge, and the latter company has £75,000 capital, and takes over the s.s. Batiscan and s.s. Kamouraska.

The Ulster Steamship Co., owning the s.s. Bengore Head, has served a writ on the owners of the s.s. Batiscan, under charter to the Dominion Coal Co., for \$150,000 damages sustained when the two vessels collided in the St. Lawrence recently. It is reported that the owners of the Batiscan intend suing the Bengore Head owners for \$50,000. At the recent investigation into the causes of the accident, the judgment of the Dominion Wreck Commissioner, which is given in this issue on another page, held that the Batiscan was solely to blame.

The Federal District Court at New York City, recently authorized P. A. S. Franklin, receiver for the International Mercantile Marine Co., to pay \$5,250,000 for five steamships owned by the Pacific Mail Steamship Co., operating on the Pacific. The vessels were bought for the Atlantic Transport Line, a subsidiary of the International Mercantile Marine Co. Following are particulars regarding them:—

Name.	Built.	Gross tons.	Cost.	Selling price.
China	1889	5,060	\$ 800,000	\$ 250,000
Korea	1902	11,276	2,200,000	1,000,000
Manchuria	1904	13,369	2,600,000	1,500,000
Mongolia	1904	13,639	2,600,000	1,500,000
Siberia	1902	11,284	2,200,000	1,000,000

The Union Steamship Co., of New Zealand, is reported to have purchased the British s.s. Maritime, and it is said that she will be placed in service between Australasia and Canada. The s.s. Maritime was formerly the Norddeutscher Lloyd s.s. Schlesien, and after being captured by the British, she was condemned by the prize

court and sold to the Maritime Steamship Co., Liverpool, who renamed her Maritime. The price paid for the vessel at the prize court auction is reported as \$326,000, and the price paid by the Union Steamship Co. is said to be \$600,000.

## Maritime Provinces and Newfoundland.

An order in council has been issued establishing a permanent harbor quay line at Halifax, N. S., beyond which wharves, piers, breakwaters, etc., shall not in future be built.

An explosion took place on board the Newfoundland schooner Hiawatha, at Halifax, N.S., Sept. 10, and three members of the crew died as a result of injuries received. The vessel was loaded with gasoline, valued at \$5,000, and as a result of the subsequent fire was, with about 30 ft. of the wharf, destroyed.

The Marine Department announces the removal, on or about Sept. 30, of the lightship maintained on Lurcher shoal, off Yarmouth, N. S., for repairs. During the absence of the vessel, the station will be marked by a combined gas and whistling buoy, painted red, and showing an occulting white light. It is anticipated that the vessel will be replaced on or about Nov. 1.

The Reid Newfoundland Co.'s s.s. Home, which has for some time been doing coastal work at Green Bay, has been placed on the Cabot Strait service temporarily, taking the place of the s.s. Bruce, which was sold to the Russian Government recently for icebreaking service at Archangel. The company has not as yet made any arrangements with regard to the permanent replacement of the Bruce.

The Public Works Department's District Engineer reports that the channel through the bar at the entrance to South Ingonish, N.S., was originally dredged to a width of 200 ft. and a depth of 14 ft., but it has gradually narrowed and shoaled. In 1909 a dredge was engaged in deepening the channel to 20 ft., and widening it to 180 ft., but the work was not completed, and at present a channel, not quite straight, with an average width of 130 ft. is available with the full depth of 20 ft. The channel is marked by three starboard and three port hand buoys.

## Province of Quebec Marine.

Considerable progress has been made during the summer on the St. Charles River improvement works. It is expected that the dam above the locks will be completed by the close of navigation. Dredging on the new course of the river is proceeding actively. On the Louise embankment the area southeast of the locks is to be filled in and used as a freight yard. Quinlan & Robertson are the general contractors.

The Marine Department has established two pairs of day beacons to mark the channel in Lake St. Peter leading to the mouth of the Petite Yamachiche River. The Department has also announced that in order to obviate confusion between the Boucherville range lights and the Boucherville west range lights, the former, nos. 1439 to 1440, are now designated as the Grosbois range lights, and the latter, nos. 1447.4 and 1447.5, as Daigneault range lights.

A Montreal press report states that Canada Steamship Lines, Ltd., is guaranteeing to every employe, married or single, who enlists for service at the front, his position on his return, and will insure the lives of all married employes who enlist. The com-

will be paying the dependents of employees who have enlisted, whether married or single, \$10 a month. It will also advance training fees to those who enlist in the aviation training corps.

### Ontario and the Great Lakes.

The Public Works Department has dredged a channel to Port Darlington, to 14 ft. deep. Between the piers for 1,300 ft. there is a bottom width of 100 ft., the edge of the channel being 25 ft. from each pier. From the end of the piers southerly the channel widens from 100 ft. to 210 ft. in about 250 ft.

W. Evans, John Dodds, J. B. Stewart and G. M. Arnold, Inspectors of Boilers and Machinery, under the Canada Shipping Act, for the port of Toronto, have also been appointed officers to superintend the measurement of ships there, in place of A. R. Stanbury, Measuring Surveyor since 1908, who has resigned.

The U. S. Survey reports the levels of the Great Lakes in feet above tidewater, for August, as follows.—Superior 602.41; Michigan and Huron 580.11; Erie 572.34; Ontario 245.43. As compared with the average August levels for the past ten years, Superior was 0.23 ft. below; Michigan and Huron 0.87 ft. below; Erie 0.32 ft. below and Ontario 1.21 ft. below. It was anticipated that during September, Superior would be 0.1 ft. higher; Michigan and Huron, 0.2 ft. lower, Erie 0.3 ft. lower and Ontario 0.4 ft. lower.

The Cadillac Steamship Co.'s s.s. Western Star, owned in Cleveland, Ohio, struck on Robertson rock, north of Clapperton Island, off Manitoulin Island, Sept. 24, and sank in about two hours. The four passengers and crew of 20 were all saved and taken to Little Current. It is stated that the vessel and cargo of 7,000 tons of coal for Little Current will probably be saved. The Western Star is a steel vessel, built at Wyandotte, Mich., in 1903, equipped with triple expansion engines 22 x 35 x 58 x 42 ins., supplied with steam by two Scotch boilers 13 x 11½ ft. at 170 lbs. under induced draught. Her dimensions are: Length, 416 ft.; breadth, 50 ft.; depth, 28 ft.; tonnage, 4,764 gross, 3,593 register.

The Canadian Stewart Co.'s steam tug J. C. Stewart, which arrived at Toronto re-

cently, for use in connection with the harbor development work there, was built at Ferrysburg, Mich. She is of steel throughout, with accommodation for the master in the wheel house on the top deck, and for a crew of 12 on the main deck. She is equipped with fore and aft compound engines with cylinders 14 and 30 ins. diam. by 24 ins. stroke, supplied with steam by a Scotch boiler 10 by 11 ft. at 150 lbs. The tug's dimensions are, length 81 ft. 9 ins., beam 20½ ft.

The Montreal Transportation Co.'s s. s. Fairmount is reported in a dispatch from Kingston, Jamaica, to have been abandoned as a total wreck on the Point of Flat Clays, near Acklin Island, Bahamas. The Fairmount was under charter to the Inter-American Steamship Co., and when wrecked was en route from Newport News, Va. to Cienfuegos, with coal. She was built at Newcastle, Eng., in 1903, and was of steel with triple expansion engines with cylinders 21 x 35 x 58 x 39 ins. stroke, of 1,200 i.h.p., supplied with steam by 2 Scotch boilers 14 ft. by 10 ft. 8 ins. at 180 lbs. Her dimensions were, length 248 ft. 6 ins., breadth 42 ft., depth 23 ft., tonnage, 1895 gross, 1184 register. Prior to entering the Atlantic and coasting trade this year, she was operated in the Great Lakes trade.

### Manitoba, Saskatchewan and Alberta.

The steamboat Princess, operating between the Saskatchewan and Regina beaches at Regina, Sask., struck a pile at Saskatchewan Beach, Sept. 6, and sank in a few minutes, in about 6 ft. of water. It is stated that she will be raised and repaired to be ready for service next year.

C. F. Law, of Vancouver, B.C., who represents the interests of the Peace River Tramway and Navigation Co., with which D. A. Thomas, the British Government representative in this country regarding munitions, is closely associated, was in the Peace River District early in September, and when in Edmonton, Alta., is reported to have stated that work had been commenced on the construction of the first of three steamships for operation on the rivers and lakes north of Edmonton. Canadian Railway and Marine World has already given some details of this vessel. Of the two other vessels mentioned, one, it is stated,

will be run on the waterways below the Chutes, and the other, which will be the largest, is intended for the Mackenzie River.

### British Columbia and Pacific Coast.

C. H. Nicholson, Manager, G.T. Pacific Coast Steamship Co., is reported to have stated that the company will operate in the Alaska trade next spring with the steamships Prince Rupert and Prince George.

The G.T. Pacific Coast Steamship Co.'s s.s. Prince Albert, which has been operating on a charter between San Francisco and Los Angeles for some time, has returned to the British Columbia coast service.

The first steamship repair to be undertaken in the Grand Trunk Pacific dry dock at Prince Rupert, was on the s.s. Delhi, which was wrecked on the Alaskan coast recently, and salvaged and towed to Prince Rupert by the tug Sea Lion.

The Shell Co., of California, Inc., proposes to build a wharf and dock on the foreshore of a portion of district lot 215, group 1, New Westminster District, B. C., and has deposited plans with the District Registrar of Titles at New Westminster.

It is reported that the Dominion Government will call for tenders shortly for the construction of a wharf and shed at Vancouver, 700 x 80 ft. wide. The building will be of structural steel and sheet metal on a concrete base. The approximate cost is mentioned as \$250,000.

The Public Works Department has dredged the channel at the mouth of the Pitt River between Douglas Island and the mainland, to 25 ft. depth at low tide, and to 300 ft. wide from the upper end of the cut to the lower end of Douglas Island, and 150 ft. from there to deep water in the Fraser River.

Ocean Fisheries, Ltd., has been incorporated under the British Columbia Companies Act, with \$200,000 capital and office at Victoria, to carry on a general fishing business, and in connection therewith to own and operate steam and other vessels of all kinds. The incorporators are R. T. Elliott, K.C., H. H. Shandley, S., and R. Balcom and A. R. Langley, Victoria, B.C.

The West Vancouver council is considering a proposal to purchase the West Vancouver Ferry Co., and to operate the property as a public utility. A press report states that the company has offered to sell to the municipality for \$8,000, the latter to assume all the indebtedness of the company. The company was organized in 1912, and has not been a financial success.

Reports advise that the channel at the mouth of the Fraser River is only 24 ft. deep, compared with 28 ft. last winter and spring. The cut for the channel which was completed about a year ago, gave a channel 400 ft. wide and 29 ft. deep. Since then the channel has narrowed to 300 ft. It is suggested that if the channel were widened on the south side at the outer end about 400 ft. and made about 200 ft. wide at the inside end, the current would run through the cut, which is about 3,000 ft. long, and carry the sand deposit into the gulf.

**Ocean Vessels for Grain.**—The Minister of Railways and Canals, when in Winnipeg, Sept. 10, is reported to have stated that he understood from the Premier that complete arrangements had been made for the transportation across the ocean of all the grain which offered during September, after which further arrangements would be made, the Admiralty releasing more vessels as they were required for that purpose.

## The Batiscan-Bengore Head Collision.

The formal investigation was held at Quebec recently, into the causes of the collision between the steamships Batiscan and Bengore Head, off Cape Salmon in the River St. Lawrence, Aug. 1, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. F. Nash and J. A. Murray, as nautical assessors. The following summing up and judgment were made by the Wreck Commissioner, and concurred in by Capt. F. Nash, Capt. J. A. Murray dissenting on the matter of sentences,—

With regard to the Bengore Head, it may be said that the testimony of the master and pilot was straightforward, and corroborated by both the scrap and officer's logs. A proper course was steered up to and after passing Morin Shoal. The various orders to the engine room, the sounding of one blast on the whistle, and porting slightly in order to pass further from the other ship which was sounding two blasts, prolonged blasts, were proper. The hard a-porting and putting of the engines full speed astern were done in the agony of the collision, and in view of the existing circumstances, if no signals were given indicating these evolutions, it is excusable.

Regarding the Batiscan a multitude of conflicting statements appear in the evidence of the master, especially in his cross examination, the scrap and officer's log books contradicting his deposition to a certain extent, or incidents were not properly entered. We cannot accept his version, as the evidence is contradictory and uncorroborated so far as the logs are concerned.

The court having carefully examined the evidence adduced, finds; That the Batiscan is alone to blame for the collision. The nature of the impact, the damage done, in view of the nature of the cargo on the Bengore Head, which was composed of articles which offered an almost solid wall, indicates beyond the shadow of a doubt, that the Batiscan had, at the time of the collision, some considerable way on her, which is contrary to the evidence of the master, who avers that his ship had sternway to the extent of two knots. His admission that he sounded several two prolonged blast signals prior to the collision, wishing to indicate to the oncoming vessel that his ship was still in the water, induces this court to say that this was a misleading movement, and a wrong signal to give when his ship still had headway. He also admitted that his telegraph remained at full speed, though his speed was less owing to the reduction of steam. Article 16 of the Rules of the Road, says that a steam vessel hearing apparently forward of her beam, the fog signal of a vessel, the position of which is not ascertained, shall, so far as the circumstances of the case admit, stop her engines and then navigate with caution until danger of collision is over. In this case it is apparent that this article was not carried out. As to the sounding of the blasts from each vessel there appears to be no contradiction, except as regards the sounding of the three blast signal by the Batiscan, only we cannot credit that the Bengore Head, after, according to the evidence of the witnesses, of the Batiscan crossing from port to starboard, to the extent of six points, would describe half a circle and come back partly across the bow of the Batiscan, and be struck where she was. We do not find anything in the evidence to indicate that the Bengore Head adopted a wrong movement. Her porting her helm prior to the collision was a proper operation, in view of the two blasts she was hearing from the other ves-

sel. We say that in view of the evidence adduced, we find that Capt. Green, who was, prior to and at the time of the collision, in gate with caution. Hence we suspend his full command of the Batiscan, did not navigate certificate no. 3566, for two years from Aug. 16, with the proviso that on Aug. 1, 1916, a certificate as first mate shall be given to him to be retained until the expiration of his suspension, Aug. 16, 1917. With respect to the pilot of the Batiscan, Jules Lachance, we claim that the collision is due to bad seamanship, and not to lack of local knowledge, and that the master had assumed the giving of the orders; but with the acquiescence of the pilot, who was consulted. Therefore we hold the pilot partly at fault, and fine him \$300, payable \$100 a month. The second officer, who acted subject to the instructions of the master and pilot, is held blameless.

With respect to the Bengore Head we have no criticisms to make as to the conduct of the master or officers, and therefore exonerate them from blame. We also exonerate the pilot, Alfred Raymond, of the Bengore Head, of any fault in bringing about the collision; but we regret to state that leaving his post at such a crucial moment, when his services were immediately needed by the master to beach the vessel, shows unreliability in the moment of danger. He has a clean record, and one which up to this, has been absolutely above reproach, and had others of the crew abandoned their posts, and been found on the Batiscan, we would have analysed his action less severely; but he was the only one. That nothing more serious happened to the Bengore Head whilst he was absent, does not lessen the degree to which he was at fault in this respect, and having pronounced him unreliable the court has no alternative but to cancel his license, which it hereby does. Counsel for the Bengore Head, F. E. Meredith, K. C., in his address to the court, criticized in a forcible manner the instructions, or sailing directions issued to the master of the Batiscan, Capt. Green, by the charterers, the Dominion Coal Co.; but after consideration this court has determined that it is beyond its jurisdiction to comment on such document, other than to say that it behoves those interested to unite and discuss the possibilities of formulating instructions which will leave no room for wrong interpretation.

Capt. J. A. Murray, in dissenting, wrote:

Although I quite concur in the main points of your decision, I would ask you to kindly reconsider the sentence passed on Capt. Green and Pilots Raymond and Lachance.

Might I suggest that you reconsider the total suspension of Pilot Raymond's certificate. When he left the bridge he was told the ship was sinking, and although we feel he ought to have stood by the Captain, he had been told the ship was sinking, the crew had been ordered to the boats, and he, I am sure, in his own mind, felt justified in trying to save his life. Moreover, he was man enough to admit he would not do the same thing again. Furthermore, his past record is excellent.

With reference to Captain Green, might I suggest that he be granted a mate's certificate in the interim.

With regard to Pilot Lachance, as far as the actual working of the ship, Captain Green seemed to be in full charge and as such, in my opinion, assumed all responsibility; and if you concur possibly a lighter sentence might meet his case.

## Grounding of the s.s. Romera.

An investigation was held at Montreal recently, into the causes of the stranding of the British s. s. Romera on the south shore of the River St. Lawrence, between Capes Dog and Salmon, Aug. 16, before Capt. L. A. Demers, Dominion Wreck Commissioner, and Capt. F. Nash and Jas. Black as nautical assessors.

The vessel, which is owned by the Glasgow United Shipping Co., was bound to Montreal from Boulogne, France, and took a pilot on board at Father Point. When in the vicinity of Red Island, the weather thickened with a mixture of fog and smoke. The master stated that although he had been three times in the St. Lawrence this year, he was somewhat a stranger to the route. He had had the same pilot on each occasion and had found him reliable and attentive to his duties. He left all the shaping of the courses to the pilot. The pilot, Arthur Lachance, stated that he had been piloting for 28 years without an accident for which he had been found at fault. The only cause to which he could attribute the grounding, was that the tide, which was ebbing, must have had a tendency to draw the vessel ashore. The courses steered were the usual ones, and there was no possibility of taking a bearing, as the land was not seen.

The following judgment was delivered,—the court having carefully weighed the evidence finds the pilot, Arthur Lachance, alone to blame. We accept his statement that he steered his usual courses without, in this case, having regard to the state of the tide or current affecting his ship. He has had a considerable period of service, and a good record, and we shall not use severity, for what we consider an error of judgment on his part, and, therefore, we condemn him to pay a fine of \$100, by Oct. 1. We call his attention, and that of all pilots, to the fact that a safe course can be so considered only when all factors likely to cause ships to deviate, sensibly if not visibly, are taken into account. The fact that the master and second officer supposed the ship to be from 1 to 1½ miles off Cape Dog when abeam; also that there was no anchorage ground in the immediate vicinity, and that the ship was being navigated slowly, the rules of the road being observed to the letter, induce us to deal with the pilot in a lenient manner. As the master and second officer were practically strangers in these waters, and had had the same pilot on three previous occasions, and found him reliable and attentive, it is quite natural to suppose that they relied on his statement that the ship was 1½ miles off Cape Dog. We therefore exonerate both the master and second officer from all blame in connection with this casualty. The action of the master in putting his helm hard starboard, and ordering his engines full speed ahead, to give further impetus to the ship so that she might answer her helm promptly, was proper under the circumstances.

The American Association of Port Authorities held its annual convention at Los Angeles, Cal., Sept. 16. The 1916 convention will be held at Montreal in September. W. G. Ross, Chairman, Montreal Harbor Commissioners, has been elected First Vice President of the association for the current year.

J. H. Welsford, the head of the Union Steamship Co. of British Columbia, and other shipowning companies, has given the use of his country home near Chester, Eng., as a hospital for wounded soldiers. The cost of equipment for the accommodation of 90 men has been paid by him.

### The Ontario Car Ferry Company's Car Ferry Ontario No. 2.

This vessel made her first trip on the route between Cobourg, Ont., and Rochester, N. Y., Sept. 16. A machinery trial trip took place at Toronto, Aug. 28, when a number of those interested in transportation had a couple of hours run on the lake at the invitation of the builders. It is not the company's intention to place her in regular service at present, the car ferry Ontario No. 1 remaining in service for the remainder of the passenger season, when Ontario No. 2 will take up the freight business for the winter and be fitted out for passenger service in the spring. In the meantime Ontario No. 1, will be taken off the route and thoroughly overhauled.

The Ontario No. 2, which is practically a sister vessel of the Ontario No. 1, was built

14 by 12 ft. fitted with forced draught, and carrying 180 lbs. of steam. A detailed description of the vessel was given in Canadian Railway and Marine World for April, 1914.

### The Loss of the s.s. Alexandria.

An investigation was held at Toronto, Aug. 30, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. Jas. McMaugh and Jno. Williams, into the causes of the loss of Canada Steamship Lines s. s. Alexandria off Scarboro Bluffs, near Toronto, Aug. 3.

The master, Wm. Bloomfield, stated that he was bound from Port Hope to Toronto, and on leaving port the weather was thickening intermittently with a light wind astern and very little sea. Later in the day, the weather being misty, he changed his course to make

the starboard boats, and lines were fastened so that they could make shore and be brought back again; but this method was ineffective. The crew were rescued by the life saving crew there, and employees of the company, about 3 o'clock a.m., the ship having been exposed to the storm from about 5.30 the previous evening. The first officer corroborated the master as to weather conditions, and said that he left the master in charge of the steering when he received an order to jettison some of the cargo from the forward hold, to increase the draught aft, she being then 6 ins. by the head; but this was found ineffective. The wheelsman testified that the ship steered well in ordinary circumstances; but on this occasion, in view of the strength of the wind and seas she would not answer her helm and became absolutely unmanageable.

After carefully weighing the evidence ad-

The Ontario Car Ferry Company's Car Ferry Ontario No. 2.

by Polson Iron Works, Ltd., Toronto, and is of the shelter deck type, with four tracks on the main deck, which is of steel throughout without wood sheathing. The shelter deck is of steel laid flush, with a steel deck house running throughout its greatest length, with accommodation for passengers, officers and crew. The hull is divided by six water tight transverse bulkheads extending from the keel to the main deck with a longitudinal bulkhead along the centre line. The vessel has capacity for 28 loaded cars of 68 tons gross weight each, and 200 tons of fuel in the bunkers. The draught is 16½ ft. when fully loaded, and the normal speed will be 13 miles an hour, but the machinery is capable of making 15 miles an hour on emergency. The propelling machinery consists of two triple expansion jet condensing engines with cylinders 20½, 33 and 54 ins. diam., by 36 ins. stroke, running at 110 r.p.m., and supplied with steam by four Scotch boilers

out the land and perceived he was in the vicinity of Frenchman's Bay, and hauled out on his former course. Shortly after a strong wind arose and the vessel became unmanageable. He tried to bring her towards the land, or to keep her away from the land, but she broached to, and the seas striking her, the anchor shutters were carried away and the water got into the gangways and the holds. When advised by the engineer that there was a certain quantity of water in the hold he attempted to make the land; but the ship would not answer her helm. The wind increased until it rose to a heavy gale, and the seas roughened rapidly, and therefore, knowing that his ship had been repaired, and was stronger at the stern than at the bow, he backed her to the shore, and finally grounded at Scarboro Bluff. At the time she grounded there were some 3 ft. of water in her hold, and the fires were put out shortly before. He gave orders to lower

qued, with respect to the navigation of the vessel, and the statements of witnesses regarding the strength of the wind on that afternoon, when it was proved that ships of stronger build than the Alexandria had to return to port in view of the wind conditions, which reached the velocity of a hurricane, the court finds that the master, in view of his idea of consideration for the lives of the crew under his care, and thinking he was justified in beaching his vessel owing to his being under the impression that if he went out further to sea his ship could not have stood the fury of the gale, and the seas, which had already done considerable damage, in fact to such an extent that she was making water, was not guilty of fault. The method adopted by the Master in beaching his vessel appears, on the face of it, a peculiar one; but owing to the conditions already mentioned as existing, the vessel could not be brought over to star-

board, would not answer her port helm. He pursued an unusual course of backing his vessel to the shore, which, however, appears to have been successfully performed. We may say that under the circumstances the fact that no lives were lost is providential. In view of the conditions prevailing at that time, the nature and build of the

vessel, her light draught, about 7½ ft., we exonerate the master from all blame with reference to the loss of his ship. As the mate did not take part in the operations, having been away from the bridge superintending the jettisoning of the cargo along with the rest of the crew, he is not held to blame in any way.

## Shipping Letters From the Head of the Great Lakes.

Sept. 11.—F. & W. Jones, shipping brokers, Port William, Ont., have written:—

Arrivals of coal at these ports are still very light, only seven cargoes being unloaded during the week, five bituminous and two anthracite—two were carried in United States steamships and five in Canadian. Two steamships are now at the docks and two are reported en route. Shipments of coal by car to the west is on the increase, but is by no means up to normal as yet. The Canadian Pacific Ry. has been receiving on company's service coal fairly steadily all through the season and, with its buyings from the western mines, has nearly enough to take care of its requirements for autumn and winter. Arrivals of C.P.R. on company's service coal will not amount to any large bulk. The National Transcontinental Ry. has also been receiving in large quantities the past few months and no heavy rush is looked for from that direction. Although the Canadian Northern Ry. has had a good run of o.c.s coal all the season its coal consumption this year will greatly exceed that of last year on account of its new line from Port Arthur east being put into operation this autumn. In all probability the fueling of all its eastbound trains will be done from Port Arthur, and any other point which may be opened as a fueling point will be served from these ports. Therefore it is quite likely that this road may still get in a quantity of coal.

One cargo of ore was shipped to Cleveland this week. No charters are reported for immediate loading. The total shipments of ore this year are approximately 60,000 tons; this was carried in 17 cargoes, three were in U. S. vessels and the balance in Canadian. There are approximately 25,000 tons

still to be shipped, the majority of this is now on the dock.

Sixteen cargoes of grain have gone east this week—two of these were in U. S. bottoms and billed to Buffalo. The total shipments this week were 851,853 bush. of all grains, compared with 449,831 bush. last week. New grain has commenced to arrive at a good rate, the approximate receipts of the new crop being: 1,880,000 bush. wheat, 90,000 bush. oats, 185,000 bush. barley. Stocks show a decided increase, being 3,275,637 bush. of all grains, as compared with 1,566,927 last week.

Several U. S. vessels are chartered to load grain at these ports during the coming week and there is no doubt that from now on the harbors will be very busy. The elevators have announced that after Sept. 15, until the close of navigation, they will work Sundays and nights, without charge to the vessel.

Sept. 18.—Coal arrivals show an increase and one anthracite. Dispatch in load-out and one anthracite. Dispatch in loading is very good at all docks, all docks are working to capacity, although as yet no night work is being done, but it can be arranged when the necessity arises. Four steamships are en route, all bituminous. Car shipments to the west are about the same as at last writing, steady, but not up to the regular bulk usual at this time of the year.

No ore was shipped this week. One vessel is chartered, and will be at the dock early next week.

Grain shipments from the Canadian head of the lakes show a decided improvement. The total shipments are 3,106,453 bush. of all grains. Of this, 646,666 bush. went to Buffalo in three U. S. steamships and one

Canadian. The balance, 2,460,187 bush. was carried in Canadian steamships to Canadian ports. Receipts are coming in slowly for this time of the season, the reason for this being the bad weather that has prevailed all over the Northwest the last week. Conditions are improving and large receipts are looked for from now on. Dispatch in loading cannot be considered good as yet. Stocks are scattered and shippers are having difficulty in getting their cargoes together. As stocks increase dispatch will necessarily improve. The autumn rush cannot be considered to have begun, but by the last of the month these two ports should be taxed to their fullest capacity. Stocks in store, receipts and shipments during the week are:

	Stocks.	Receipts.	Shipments.
Wheat .....	2,983,871	3,900,292	2,875,167
Oats .....	147,059	87,520	66,281
Barley .....	242,073	168,948	135,906
Flax .....	994,815	3,208	.....

## Big Steamships and Economic Ocean Transportation.

A dozen years or more ago there was a great deal of discussion as to the rapid increase in the size of ships and its influence on economic freight carriage at sea. About that time J. J. Hill, President of the Great Northern Ry., gave a contract for the construction of two of the largest vessels ever built for freight carrying to run in Trans-Pacific service in connection with that railway. The end of that experiment has just been announced. One of those two huge vessels, the Dakota, was stranded after she was put into service, and became a wreck before she could be hauled off. The other, the Minnesota, after experiencing various vicissitudes, was continued in service and only recently was said to have transported across the Pacific the largest cargo of freight ever transported by a single ocean vessel. Notwithstanding this and the high rates for ocean freight now prevailing, it is announced that the railway company has decided to retire her from service and offer her for sale. While it is quite possible that the impending changes in the United States navigation laws may have something to do

with this decision, it is also stated that the vessel has not proved the profitable carrier that was expected. The experienced ship owners of Great Britain and Germany, who doubtless understand the ocean transportation business better than the business men of any other nation, continue to build freight vessels of moderate size in order to earn profits. It is only on the route between New York and Europe, where high class passenger traffic is under competition, that vessels larger than 20,000 tons have ever been put in profitable service, and very few ships operated on any other route exceed 10,000 tons.—Engineering News.

#### Telegraph, Telephone and Cable Matters.

The Bell Telephone Co. of Canada has 123 of its employees enlisted for active service, the majority of whom are already in continental Europe.

W. E. Bell has been appointed acting chief assistant to the Manager of Telegraphs, G. T. R. and G. T. P. R., Montreal, during the absence on leave of A. P. Linnell, who has enlisted for active service in Europe.

#### Among the Express Companies.

A. W. Martin has been appointed agent, Canadian Northern Ex. Co., Port Arthur, Ont., vice J. W. McDonald, deceased.

W. F. Pillar, agent, Canadian Northern Ex. Co., Edmonton, Alta., who has been on leave of absence for five months, has resumed his duties.

The Dominion Ex. Co. has opened offices at Breckenridge, Que., Castleton, Ont., and Coalmont and Renata, B. C., and has closed its offices at Glanworth and Port Stanley, Ont., and Port Simpson, B. C.

A press report states that the European representative of an American express company is in Petrograd, Russia, investigating the advisability of establishing an office there, with agencies in other parts of the country.

E. J. Wearing, Passenger Agent, G.T.R., Liverpool, England, has also been appointed acting General Agent, Canadian Ex. Co., there, succeeding W. Cuthbertson, General Agent, deceased, and has not been appointed General Assistant, as stated in our last issue.

The Canadian Ex. Co. has opened offices at Coldbrook, Kingsclear, Pokiok and Temple, N. B., Pictou Landing, N. S., St. Perpetue, Bridge, Hervey Jct., La Chat, La

Tuque, Monk, Rosaire, St. Adelpha, St. Malachie and St. Marc, Que., and Smithfield, Ont.

Canadian Ex. Co.'s statistics of operation for April show the following details:—Mileage of all lines covered, 9,676.50; charges for transportation, \$262,250; express privileges, \$123,579; operation other than transportation, \$5,559; total operating revenue, \$144,230; operating expenses, \$121,914; net operating revenue, \$22,315; express taxes, \$4,000; operating income, \$18,304.

#### Transportation Conventions in 1915-16.

Oct. 4, 5.—American Association of Traveling Passenger Agents, Boston, Mass.

Oct. 4-8.—American Electric Railway Association, San Francisco, Cal.

Oct. 5-7.—Railway Fire Protection Association, Chicago, Ill.

Oct. 10.—National Association of Railway Commissioners, San Francisco, Cal.

Oct. 13.—Association of Water Line Accounting Officers, Washington, D.C.

Oct. 13.—Railway Taxmen's Association, Chicago, Ill.

Oct. 13-15.—American Association of Railway Surgeons, Chicago, Ill.

Oct. 19-21.—Maintenance of Way and Master Painters' Association of the United States and Canada, St. Louis, Mo.

Oct. 19-21.—American Railway Bridge and Building Association, Detroit, Mich.

Oct. 19-21.—Society of Railway Financial Officers, Colorado Springs, Col.

Oct. 21-23.—American Association of Dining Car Superintendents, Boston, Mass.

Nov. 17.—American Railway Association, Chicago, Ill.

Nov. 17-19.—International Association of Ticket Agents, New Orleans, La.

Dec. 7-10.—American Society of Mechanical Engineers, New York, N.Y.

Dec. 14.—Association of Transportation and Car Accounting Officers, St. Louis, Mo.

Jan. 18-20, 1916.—American Wood Preservers' Association, Chicago, Ill.

March 21-23, 1916.—American Railway Engineering Association, Atlantic City, N.J.

May 2-5, 1916.—Air Brake Association, Atlanta, Ga.

June 28, 1916.—Association of American Railway Accounting Officers, Detroit, Mich.

#### Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Canadian Car Service Bureau—J. Reilly, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday each month, 8.30 p.m., except June, July, and August.

Canadian Society of Civil Engineers—C. H. McLeod, 176 Mansfield St., Montreal.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Central Railway and Engineering Club of Canada—C. L. Worth, 409 Union Station, Toronto. Meetings at Toronto, 3rd Tuesday each month, except June, July, and August.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Express Traffic Association of Canada—W. H. Burr, Chairman, Toronto.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario, T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Nova Scotia Society of Engineers—A. R. McCleave, Halifax, N.S.

Quebec Transportation Club—A. F. Dion, Quebec.

Ship Masters' Association of Canada—Capt. E. Wells, 45 St. John Street, Halifax, N.S.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Western Canada Railway Club—Louis Kon, Box 1707, Winnipeg. Meetings at Winnipeg, 2nd Monday each month, except June, July, and August.

#### Tonnage on Welland and Panama Canals.

A comparison of the tonnage and number of vessel passages on the Welland and Panama Canals, for a six months period, shows the following.—Welland Canal, 3,314 vessel passages; 3,484,327 total tonnage; Panama Canal, 496 vessel passages; 2,367,244 total tonnage. The average tonnage per vessel passage through the Welland Canal is 1,050, while that through the Panama Canal, is 4,770. On the completion of the Welland Ship Canal, vessels of a considerably larger type than can be used at present will be able to pass, of course with correspondingly larger cargoes, so that though a decrease in the number of vessel passages may be looked for, the average tonnage will doubtless be considerably increased.

#### Foreman Patternmaker

A first class patternmaker with sixteen years experience in Railroad, Marine and General Work, is open for position as foreman. For full particulars, apply

Patternmaker Box 67  
Care Canadian Railway & Marine World.

The Connoisseur's Choice:—

**DREWRY'S  
AMERICAN**

Style  
**RICE  
BEER**

A High Class Beverage, in great demand. In cases of Pints or Quarts.

# PEDLAR'S "PERFECT" PRODUCTS MADE IN CANADA

## The First Cost is the Only Cost

WHEN you are figuring on a culvert installation, it is well to consider the importance of permanent construction. It is poor economy to saddle the corporation with a heavy burden of maintenance cost.

### PEDLAR'S 'Perfect' Rivetted CULVERT

is the most satisfactory and least costly form of Culvert Construction. Easy to install, and once installed the job is PERMANENT. No maintenance required.

Made of heavy gauge, anti-corrosive, galvanized **TONCAN** metal possessing wonderful strength, ductibility and malleability.

Shipped assembled in lengths up to 40 feet—coupling bands supplied free for greater lengths. Diameters 18 ins. to 84 ins.—special sizes made to order.

Write for Culvert Reference Book No. 4 "R.M." containing drainage tables and important data.

Address Nearest Branch.

### Standard Steel Platforms

Used by all Canadian Railway

The Port Arthur, Ont., City Council passed a resolution, Sept. 17, giving permission to the Canadian Northern Ry. for the erection of stockyards in connection with its terminals. The permission is a temporary one, the reason being that the site proposed to be used is already the subject of an agreement between the city and the company.

### CANADIAN BRONZE LIMITED

Brass Wearing Parts for Locomotives. Journal Bearings for Freight and Passenger Service. BABBITTS. Miscellaneous Brass Castings for Railroads.

Works and Office: 69 DELORIMIER AVENUE, MONTREAL, QUE.

# Why Stop Your Trains?

Consider the Cost of Stopping Trains  
in comparison to the Maintenance and  
Operation of Mechanical Interlocking.

Trains per day	Cost per year acct. stopping trains	Total cost per year interest deterioration maintenance and operation	Net saving per year	Cost of Interlocking Plant Complete	Time required to pay for installation from saving	Saving capitalized at four per cent
17	\$ 2800.00	\$2800.00		\$8000.00		
20	3285.00	2800.00	\$ 485.00	8000.00	16.5 years	\$12125.00
25	4105.00	2800.00	1305.00	8000.00	6.13 "	32625.00
30	4930.00	2800.00	2130.00	8000.00	3.8 "	53250.00
40	6570.00	2800.00	3770.00	8000.00	2.12 "	94250.00
50	8210.00	2800.00	5410.00	8000.00	1.48 "	135250.00
60	9855.00	2800.00	7055.00	8000.00	1.13 "	176375.00
70	11495.00	2800.00	8695.00	8000.00	11 mos.	217375.00
80	13140.00	2800.00	10340.00	8000.00	9.3 "	258500.00
90	14790.00	2800.00	11980.00	8000.00	8 "	299500.00
100	16425.00	2800.00	13625.00	8000.00	7 "	340625.00

The above figures are conservative and are taken from a reliable source (See R. S. A. Journal Vol. 1, page 286.) When you can effect a yearly saving by installing G. R. S. Mechanical Interlocking and at the same time reduce your crossing delays, add signal protection to your traffic movements — when you can do all this at a saving of

money — then why stop your trains?

Is this not a convincing reason why you should install G. R. S. Mechanical Interlocking at the majority of your crossings, junctions and yards?

Each day's delay in installing G. R. S. Mechanical Interlocking means a loss to your road.

## A Clear Track To Promotion

How to get off the side-track—how to break the couplings that hold them near the bottom of the pay roll—is the one big problem that troubles most railroaders.

There's a clear track to promotion—without grade or curve—open to the man that has the backbone and grit to take it. Before you can travel this track to promotion and bigger pay you must "coal up" with knowledge—you must be specially trained.

The Railway Instruction Department of the International Correspondence Schools is able and ready to give you the training you must have. You can get it right at home without losing an hour's time from your present job.

It will not cost anything to find out how the I.C.S. can train you for a better job. Put an "X" near the class of work you would like to follow, in the attached coupon, and mail it to the I.C.S. This won't obligate you in the least. It will simply bring full information by return mail.

## Mark the Coupon NOW

International Correspondence Schools

## STEEL BACK BRAKE SHOES

wear as shown above, before they are scrapped and they wear safely, too. You get your full money's worth in satisfactory service from them always.

Steel Back Car, Coach and Driver Shoes are absolutely essential for safe and economical operation in heavy and high-speed service.

Manufactured in Canada.

## AMERICAN BRAKE SHOE & FOUNDRY CO.

The HOLDEN CO., Ltd., Agents, 354 St. James St., Montreal.

Awarded Gold Medal Panama-Pacific Exposition.

## PAGE FLAT SHEET REINFORCEMENT

### LIES FLAT—COSTS LEAST TO LAY

The modern reinforcement. Fifty per cent. stronger—700 per cent. more bond-contact—than rounds or squares. No internal strains in "forming." Lies flat without weighting. Saves 25 per cent. to 50 per cent. laying-cost.

#### WIDELY USED

PAGE FABRIC used in the J. R. Booth Plant at Ottawa; Anglo-Canadian Leather Plant at Huntsville; Chamblay Dam at Montreal; Harris Abattoir at Toronto; C. P. R. Yards at Brantford, and in many miles of street paving at Oakville, Windsor, Walkerville, Aylmer, and Sandwich.

#### TWO SIZES

PAGE FABRIC supplied in 3 in. x 6 in. mesh for structural uses, and 6 in. x 12 in. mesh for roadway and bridge-floor work. FLAT SHEETS maximum 4 feet wide by car-length. Also in ROLLS, 4 feet wide, any length. SPECIAL MESHES to order.

FREE SAMPLES and new illustrated booklet No. 5 (with tables) on request. WRITE for them TO-DAY.

# Flange Lubrication Should be Automatic

Flange lubrication to be efficient should be automatic, absolutely independent of your engineer, and at the same time the device itself should be so simple and yet so accurate that it will be practically trouble proof. The

## Detroit Automatic Flange Lubricator (Pendulum Type)

is absolutely automatic and at the same time simple. It is all in the pendulum. Any lateral movement of the locomotive causes the pendulum to swing. This oscillation rotates, rocker-like, the pendulum shaft, which produces alternating strokes of the two plungers in the pump unit.

The use of the Detroit Automatic Flange Lubricator insures positive lubrication just when it is needed. May we send booklet F-O 81? It contains all the facts as well as drawings. Write to-day.

**CANADIAN DETROIT LUBRICATOR COMPANY, LTD.**  
WALKERVILLE, ONT.

Canadian Sales Agents: Taylor & Arnold, Ltd., Montreal.

## Which Method

prevails in your plant? Does it take two men to do one man's work.

Why don't you replace that old antiquated tool with a new up to date

## Reece's New Screw Plate

These pictures do not exaggerate conditions as you can actually see them, if you will visit Machine Shops throughout the country.

Lessen your cost by giving your mechanics a REECE'S NEW SCREW PLATE.

N. Y. CITY, U.S.A.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared, and no reasonable expense considered too great that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing, and manufacturing concerns, and by responsible and worthy financial, fiduciary, and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

OFFICES IN CANADA: Halifax, N.S.; Hamilton, Ont.; London, Ont.; Montreal, Que.; Ottawa, Ont.; Quebec, Que.; St. John, N.B.; Toronto, Ont.; Vancouver, B.C.; Calgary, Alta.; Edmonton, Alta.; Winnipeg, Man.; Victoria, B.C.

## No. 4 Type Coleman Fare Box

Our new number 4 type stationary fare box will appeal to electric railway officials for all P. A. Y. E. operating conditions.

Being but five inches square it occupies a minimum amount of space on the car platform and is especially suitable where platform space is limited and also for one man operation.

It is suspended by two brackets to the car railing and the cash box telescopes into the outside casing.

There is only one working part to the box so that there is nothing to get out of order and this feature also insures low maintenance.

Should a glass become broken or should it be desired to clean the glasses this can be accomplished in a few minutes by a very simple means.

When you are considering purchasing fare boxes investigate this number 4 fare box carefully, it will save you money both in first cost and subsequent maintenance.

## Coleman Fare Box Co., Ltd.

*Manufacturers of Portable and Stationary Fare Boxes*

**Head Office:**  
70 Bond St., Toronto

It is easy to have a simple and reliable air-compressing plant by installing —

## Westinghouse Steam-Driven Compressors

Portable Compressor  
for High Delivery Air  
Pressure.

THEY occupy the smallest possible space, yet are designed with ample proportion of all wearing parts, insuring durability and low maintenance cost. Any substantial floor is a sufficient foundation for installing these compressors. They can be mounted direct on a boiler, or to any post, column or wall, or a stand is provided making it easy to move the compressor about. A sufficient guarantee of their absolute reliability is the fact that they are the accepted standard for railway air brake systems.

## A Very Pertinent Question

To buyers of upholstery this IS a pertinent question; and it should call attention to a very important fact about upholstery material.

We all know that whole hides are too thick for upholstery purposes. The under, fleshy, spongy portion must be split away from the grain side to make the latter thin enough for use.

Now, the question is, why should the two or three sheets in which this wastage is split be called leather? The splits are artificially coated and embossed to look like natural grain leather. When it is new it often has the appearance of the genuine article—but as for wear and durability, it is an inferior substitute.

is an upholstery material of the leather type. It does not pretend to be natural grain leather as do the coated splits. FABRIKOID is marketed solely on its real merits—appearance, strength, wear and sanitary features.

FABRIKOID is guaranteed superior to coated splits. Its base is a strong, closely-woven, cotton fabric; the coating and grain-ing process is much the same as in the manufacture of splits—only the coating is much heavier.

The fabric base is a strong material that will not give nor stretch. That's why FABRIKOID doesn't crack and peel like ordinary leather. FABRIKOID is a superior product in every way—and it has all of the appearance of the finest grained leather.

A FABRIKOID product, coated on both sides, is made for car curtains. It is as ideal for that purpose as for upholstery.

Before specifying the finishings for those new cars, you should investigate DU PONT FABRIKOID. A comparison with the ordinary "genuine leather" upholstery material will be a veritable revelation—and maybe a disillusionment.

Let us prove to you that what we say about disillusionment.

*Full information about it and a sample will be sent upon request*

## The Wonderful Single Service Chilled Iron Wheel

The Chilled Iron Wheel was Standard in the year of 1850.

The Chilled Iron Wheel is Standard To-day.

The Chilled Iron Wheel has been the Standard for rail borne traffic for 65 years.

This is because of certain inherent properties which are only to be found in chilled iron. The advantages of chilled iron wheels over other types are as follows:

First: The Chilled Iron Wheel has a hard tread or wearing surface which will carry the heaviest concentrated load without excessive deformation over irregular tracks at high speeds.

Second: Chilled Iron Wheels yield the maximum of service per unit of metal worn away.

Third: Chilled Iron Wheels have the greatest coefficient of friction when in contact with the brake shoe.

Fourth: The character of the tread surface is such that the life of the brake shoe is prolonged.

Fifth: Chilled Iron Wheels are least destructive to the rail and the intensity of internal stresses in the rail depend on the character of the metal in the wheel, which transmits the heavy concentrated loads through a small surface of metal.

Sixth: Chilled Iron Wheels produce the least amount of rail abrasion.

THE WONDERFUL SINGLE SERVICE CHILLED IRON WHEEL—25,000,000 now running.

## Association of Manufacturers of Chilled Car Wheels

1214 McCormick Building, Chicago

Representing forty-eight wheel foundries located through the United States and Canada. Capacity 20,000 chilled iron wheels per day.

# WHY These Signal Failures ?

Photograph copyright by Brown & Dawson of Underwood & Underwood, New York.

When a signal fails to operate anything may happen. These photographs show what often does happen. But a signal failure is not always due to the signal—it may be in the wire, because that is the most vital part of any railway signalling system.

## *Northern Electric* "R. S. A." Wire

will meet every requirement. Its lasting qualities are the result of experience and skill acquired during many years' knowledge in the manufacture of the highest class wires and cables.

Why employ 20 to 40 men to handle your material? A

## BROWNHOIST Locomotive Crane

will do the same amount of work with a decided saving to you. Its cost, including 6% interest on investment, depreciation, and operating costs, is only \$6.00 to \$10.00 per day. It is one man operated, powerful, quick-acting, and built to withstand hard and continuous service. Records prove this.

**ADAPTABILITY.** The equipment is interchangeable. It only takes a short time to apply the Grab Bucket, Bottom Block, Drag-Line Bucket, Pile Driving Attachment, Lifting Magnet, or Shovel Equipment. This makes practically six machines in one.

**RAILROADS** all over the country are realizing more and more the advantage and economy of having a Brownhoist Locomotive Crane on the job, because it is always ready to work in case of emergency. A Brownhoist Crane can be relied upon. One road uses thirty of them.

INVESTIGATE TO-DAY. Catalogue I shows  
how and where some of these cranes are used.

***THE BROWN HOISTING MACHINERY CO.***  
**CLEVELAND, OHIO**

MONTREAL OFFICE, 145 St. James Street

# The O-B Trolley Base

## Is a Consistent Worker

It is at its job of keeping the wheel on the wire under all conditions.

It exerts just the needed pressure on the wire at all elevations and follows curves without protest.

Another thing — O-B Bases are usually found on top of cars, instead of in repair shops.

Page 508-512 give full details and listing. A free service demonstration will be made gladly.

**THE OHIO BRASS COMPANY, Mansfield, Ohio, U.S.A.**

## The "National" Truck for Interurban Service

WITH MOTORS.

WITHOUT MOTORS.

When we can say that we have never had a dissatisfied customer it means that the "NATIONAL" Truck has unusual merit. It solves the problem of minimum weight with maximum efficiency and smooth riding qualities.

"There are no rough spots on the road that uses the "NATIONAL" Truck.

ADDRESS INQUIRIES TO HAMILTON

Works and Operating Offices  
Hamilton, Ontario

Consolidated Type Locomotive Built for Freight Service on the Grand Trunk Pacific Railway.

# LOCOMOTIVES

Long experience, new equipment, efficient management and expert workmen, are guarantees that our Locomotives will give record service. Over 1,200 Locomotives have been built at our Works since the erection of the plant. We are builders of Simple and Compound Locomotives adapted to every variety of service, for Railway Contractors, for Industrial Purposes, Mines, all classes of Railway Work, etc.

We are also builders of stationary boilers, suitable for contractors and industrial plants. Grey iron castings—any size or shape—ordinary or intricate—made promptly. New foundry, splendidly equipped. We would be pleased to quote on castings—singly or by contract. We also make drop forgings of all descriptions.

**CANADIAN LOCOMOTIVE CO., Limited, Kingston, Ontario**

## The No. 25 McLain Pressed Steel Headlight

is equipped with triple nickel-plated polished reflector of special parabolic design which centralizes the rays of a concentrated filament Mazda bulb perfectly focused, throwing a straight, strong beam of light down the track, far ahead of the car.

Extremely light—weighing three pounds less than any other Headlight.

No sacrifice has been made to attain this lightness of weight for the McLAIN No. 25 is as strong as any Headlight made, and has an illuminating power in excess of other Headlights employing an incandescent globe.

Has extended dash—Dust and waterproof.

Guaranteed to give good service.

Write for booklet and prices.

## Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE — INTERCOLONIAL RAILWAY.

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders, 23½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

## Good Hunting

on Canadian Northern Railway  
Lines for Moose and Deer

North of Quebec, in Central Ontario and North of Parry Sound. Also along the south shore of Nova Scotia.

Further particulars are obtainable in our booklet, "Where to Fish and Hunt," or from the General Passenger Departments, 68 King Street East, Toronto, Ontario; 226 St. James Street, Montreal, Quebec; and 123 Hollis Street, Halifax, N.S.

Style No. 200.

## Garlock High Pressure Piston Rod Packing

Is built up in rectangular form and uniform shape and exact sizes are thereby obtained.

Asbestos packing, which is rolled around a rubber core and afterwards distorted by running through a square die, does not retain its shape or size.

The best materials we can buy are used in the manufacture of our high pressure packing.

The length of service obtained from it is greater than that secured from other makes, therefore the labor cost of applying and adjusting is less.

Our packings are sold at net weights; weights of tubes and boxes are not included.

Every pound of our high pressure packing carries with it the Garlock guarantee of satisfactory and economical service.

We will promptly replace or refund the cost of any of our packings which may prove unsatisfactory to our customers.

# 450 Railroad Shops in the United States and Canada Use Thermit

*Let us send you this pamphlet.*

This comprises practically all the shops of importance in North America, and it can be said without exaggeration that the list of railroads using Thermit includes practically every system from the small road having only three or four locomotives to the largest system in the world having many thousand locomotives.

If by any chance your shop is not using Thermit, you should investigate the process and see how effectively and economically it will handle the many repairs on locomotive frames and other sections.

Remember that the greatest railway systems in the world use hundreds of thousands of pounds of Thermit. They do not use it for any reason except that it "delivers the goods" and has proven itself a profitable investment.

Let us mail you our new pamphlet, No. 2144, which contains full information on Thermit in Railroad Shops.

All Thermit materials and appliances are manufactured in the United States and Canada

Manufactured and sold in Canada by Canadian Allis-Chalmers, Limited, General Offices, Toronto, Ont.

## Scientific Treatment of Boiler Waters

### Dearborn Service to Railroads

In these times when "Economy" is the slogan in every industry, and particularly in railroad operation, Dearborn Service should make a strong appeal to the Motive Power People.

In treating boiler waters by the Dearborn Method there is no outlay of capital required for installation of equipment, nor expense involved in putting the goods into use, while the cost of the treatment per thousand gallons of water is less than by any other method. We furnish expert testing engineers to advise as to the proper handling of the treatment to get the best results economically.

Scale formation, foaming, corrosion, and pitting are prevented, fuel and lubricating oil expense lessened, greater mileage between boiler washings made possible, as well as ability to haul greater tonnage, and the life of flues and fire boxes extended 50 to 200 per cent.

Most railways have had water supplies to contend with. We would like an opportunity to show you the efficiency of Dearborn Service in overcoming such difficulties on your line.

**Rice Lewis & Sons, Ltd.**

TORONTO, CANADA.

DESIGNED ESPECIALLY to handle pipes spaced closely as in coil work. No. 2 $\frac{1}{2}$  wrench illustrated requires but three-quarter inch space between pipes.

POSITIVE GRIP instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

RATCHET-LIKE ACTION. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

CAN'T CHEW. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

CAN'T CRUSH. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

**Thor**

## Most Convenient Air Tool Made

### CLOSE CORNER DRILL

Especially adapted for work in close quarters.

Made in Two Sizes:

- No. 8. For Drilling up to 1 $\frac{1}{4}$  in.  
No. 9. For Drilling up to 3 in.

The neat and compact construction, together with the design of the mechanical parts, makes it possible to drill holes in places where it would be absolutely impossible with an ordinary centre spindle drill.

Every experienced mechanic appreciates the value of a Thor Close Corner Drill for steady service and economy. Order one on trial to-day. We take all the risk.

Traders Bank Building

## Fire Tube Marine Superheater--Eight Reasons Why

1. It is adaptable to either new or existing boilers of the fire tube type, and can be applied with no change in design or construction.
2. It renders possible an increase in output of boiler horse power from a given boiler plant 10% to 20%.
3. It will produce the same power output with fewer boilers.
4. It reduces the size of the bunkers, thereby reducing the draft of the vessel with a given cargo, or making possible an increase in revenue cargo.

5. It results in a saving of fuel over saturated plants, both operating under the same draft conditions, of 10% to 20%.
6. It reduces the maintenance costs by the prevention of water hammer, leaky flanges, and condensation in the cylinders.
7. It does not prevent rapid, thorough, and frequent cleaning of the tubes.
8. Its construction provides easy access to all screwed joints and the easy removal of the parts.

## Canadian Pacific Railway's Passenger Terminal Improvements at Winnipeg.

The C.P.R. has recently completed extensive improvements and additions to its passenger terminal and hotel at Winnipeg. The general waiting room and such station facilities as ticket office, parcel room, news stand, telephone office and restaurant have been enlarged and re-arranged; the tracks have been raised 6 ft., and a spacious midway, second class waiting room and baggage room have been provided underneath. A new steel and concrete viaduct over Main St., to carry the tracks at the higher elevation, and an addition to the Royal Alexandra

vide for the future extension of the station tracks to the north, without interfering with the established roadway grade and clearances of Main St. passing under the tracks at the west end of the station. The old station track facilities comprised three stub end and three main line tracks for passenger service, and in addition there were two tracks for main line freight service, paralleling the passenger tracks, or eight tracks in all. The main line freight service through the station has since been abandoned, and all except local freight is

service. Permanent platforms have been installed only on the sections where there is a steel substructure; temporary wooden platforms have been laid on the filled sections and will be replaced by permanent platforms later when the new fill has settled. The tracks and platforms over the undertrack rooms are supported by structural steel and concrete, over which there is a waterproofing mat, made up of five layers of asphalt saturated felt and burlap, with an overlay of asphalt mastic 1½ ins. thick, which serves as a protection to the

Passenger Tracks and Platforms, Canadian Pacific Railway Station, Winnipeg, Looking West.

Hotel, are also included. These improvements and additions have cost approximately \$2,500,000, and were made necessary by the rapid growth of Winnipeg and of all Western Canada, which so far exceeded the most sanguine expectations, that in 1912 the railway company found its Winnipeg terminal and hotel, completed in 1906, wholly inadequate to handle its increased business.

The object of raising the station tracks was three fold: first, to provide a midway under them and thus avoid the necessity of crossing the tracks at grade; second, to provide space for a baggage room, second class waiting room and other station facilities beneath the tracks; and third, to pro-

vide for the future extension of the station tracks to the north, without interfering with the established roadway grade and clearances of Main St. passing under the tracks at the west end of the station. The old station track facilities comprised three stub end and three main line tracks for passenger service, and in addition there were two tracks for main line freight service, paralleling the passenger tracks, or eight tracks in all. The main line freight service through the station has since been abandoned, and all except local freight is

now routed over a new freight line skirting the city on the north. The new station track layout provides four platforms, served by two stub end and six main line tracks, four of which tracks will each accommodate a 15 car train. Adjoining tracks are on 13 ft. centres, while the spacing between track centres, across platforms, is 26 ft.; the platforms are normally 15-13 ft. wide.

Although passengers and baggage must use the same platforms, little inconvenience is experienced. The passengers move toward the midway stairs, while all lengthwise shifting of baggage is done below on the baggage room floor level, to a point near the end of each platform, where a lift is located, eight lifts being provided for this

waterproofing under the tracks and as a wearing surface on the platforms. The passenger stairways to the midway under the tracks are 5 ft. wide and are enclosed with ornamental iron and glass kiosks. For the present, no other shelter will be provided over the platforms, but provision for shelter supports has been made in the platform structure, and foundations are provided on the filled sections.

The new interior arrangement of the station is believed to be equal to the best in Canada, from the standpoint of the travelling public, as well as from an operating viewpoint, and combines safety and convenience. As a passenger enters the general waiting room from Higgins Ave., the

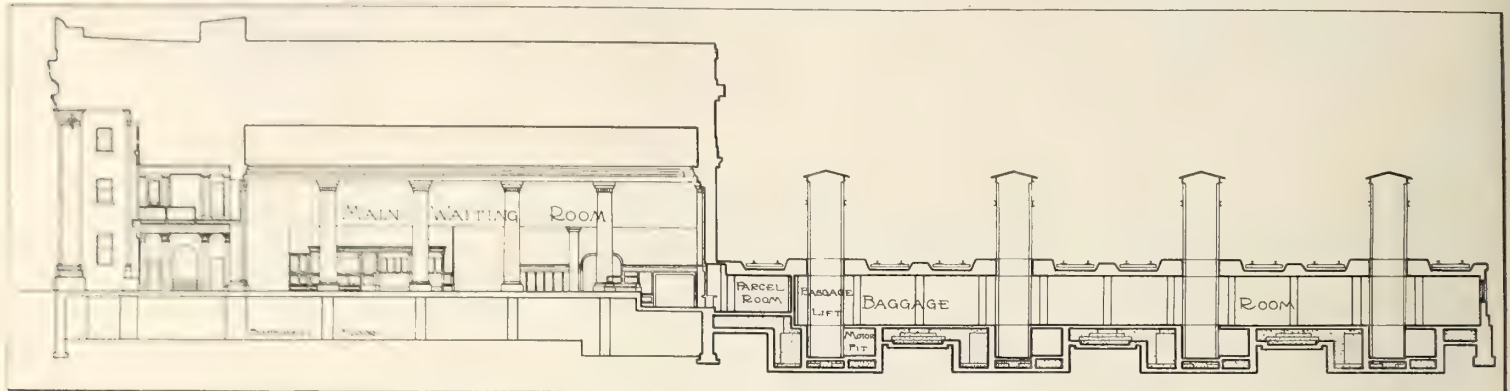

ticket office, having 10 ticket booths, is located on the east, or his right hand side, and he faces the baggage and parcel checking rooms and offices of Canadian and U.S. Customs, which are under the tracks between the waiting room and the baggage room. The waiting room in front of these facilities is depressed about 4 ft. to the level of the floor in these rooms and the midway. A broad stairway near the entrance

room of much congestion. Passengers who have secured their tickets in advance will find this a convenient entrance.

The old station restaurant and lunch room, located on the east side of the general waiting room, was abandoned to make room for the new ticket office, and is replaced by a new restaurant and lunch room, entered from the west side of the waiting room, and which occupies the space in

three 9 ft. doorways, equipped with sliding bronze doors, connect the waiting room with the midway under the tracks. Normally, outgoing passengers are held at this point until their train is ready. The midway, 48 ft. wide, extends under all four platforms and is finished with white glazed tile walls and white chip terrazzo floor. Two stairways are provided to each of the four platforms above.

Canadian Pacific Railway Station, Winnipeg. Section through main waiting room and baggage room.

to the midway, and three smaller stairways opposite the checking facilities, connect the two levels. On the Maple St. side a new entrance to the station has been provided, near the baggage room receiving platform, for the convenience of passengers bringing or taking away baggage in a conveyance with them.

A new street exit is located west of the

the connecting office building which was formerly the baggage room. This new restaurant and lunch room has a U shaped counter with 57 stools, and tables are arranged along the outside wall. The new lunch room is operated in conjunction with the Royal Alexandra Hotel; the food is prepared in the hotel kitchen and delivered in bulk through a private passage way to a

A large second class waiting room is conveniently located on the west, or left hand side, of the midway. On this side are also rooms for Station Master, Dispatcher, conductors, trainmen, Advertising Agent, C.P.R. police, and the caretaker. Ventilation in these rooms is provided by motor driven supply and exhaust fans, with the necessary distributing ducts, and provides

Canadian Pacific Railway Hotel and Part of General Offices, Winnipeg, from the South.

broad stairway and directly in front of the midway. The sidewalk at this point is sheltered by a marquee 50 ft. long, overhanging the curb about 4 ft., permitting passengers to enter a conveyance in rainy weather without exposure. This exit also serves as an entrance for special excursion crowds, which are permitted to pass directly to the trains, purchasing their tickets at a portable ticket booth on the way, thus relieving the general waiting

serving room which adjoins the lunch room on the west end.

A corridor has been provided connecting the station with the Royal Alexandra Hotel. This corridor, from its entrance at the west side of the waiting room, ramps down through the connecting office building and continues level through the basement to the hotel elevators, and a new stairway to the hotel rotunda.

Directly opposite the new street exit,

a complete change of air in each room every 10 minutes.

The new baggage room, 160 x 130 ft., occupies the space on the east, between the midway and the Maple St. concourse. At the end adjoining the midway are rooms for bonded baggage, company mail service, lavatories and lockers; of these, the mail room only has access from the midway. At the east end of the station Maple St. has been depressed and extended under the

tracks to provide a wagon concourse for team delivery to the baggage room; a loading platform, 10 ft. wide and 3 ft. above the roadway, connects with the baggage room through eight doorways, each 8 ft. wide by 7½ ft. high, equipped with vertical bi-folding doors. Three baggage weighing scales are located just inside the room between doorways. The eight electric lifts, each with a capacity of 6,000 lbs., and a car 5 x 15 ft. handle the baggage and mail between the baggage room and the track level. Four of them are located in the rear of the baggage room and serve the easterly ends of the platforms above; the other four serve the westerly ends of the platforms, and are connected, by a trucking subway, with the baggage room. An unclaimed baggage room has been provided in the basement of the station, under the general waiting room, and a reversible wood apron conveyor handles baggage between it and the baggage room. This conveyor also carries packages of stationery between the baggage room and the company's general stationery stores, which adjoin the unclaimed baggage room. Out-bound baggage is classified, as received, and arranged in groups on the south side of the baggage room; these groups are numbered to correspond with train numbers. The north side of the room is used for incoming baggage, which is classified in 10 groups, numbered 0 to 9, the next to the last figure in the check number determining the group. This arrangement of grouping incoming baggage facilitates locating pieces by check number, and in cases where one person checks more than one piece,

depression under the viaduct; the C.P.R. also furnished the fill to raise the street grade. As a consideration, the city gave the company the privilege of placing two temporary freight tracks across Main St. and on Point Douglas Ave., an unused street, on condition that the railway company would remove them as soon as it had completed raising the permanent tracks. The new viaduct is of structural steel, with ornamental concrete covering, and the street level underneath has been raised 5½ ft., but in order to provide for probable future extension of the trackage, the grade on the approaches has not been changed.

As the station track facilities were already overtaxed, the work of raising the tracks had to be carried on without reducing the number of passenger tracks in service and in a way that would permit traffic to continue uninterruptedly. This was accomplished by replacing the two freight tracks with the two previously mentioned temporary tracks, which were placed at the new high level, on a pile and timber trestle, on Point Douglas Ave., just north of the old tracks and connecting into them several hundred feet beyond the terminal area. The construction work was divided into six stages; each, except the last stage, comprising one track, the first and alternate stages including a platform. The removal of the two freight tracks made room for the first stage work, comprising the northerly track and platform, without disturbing any of the passenger tracks. The second stage work was commenced when the first stage was completed and its track put in service; the remaining stages

The addition to the Royal Alexandra Hotel was completed about a year ago and having already been described in a previous issue of Canadian Railway and Marine World, the following brief outline will suffice. It adjoins the old hotel on east and north sides, covering about 20,000 sq. ft. of ground. On the east side it has a frontage of 100 ft., facing south on Higgins Ave., and on the north, or track side, extending from the west wing of the old hotel to the west end of the connecting office building, a distance of 240 ft. The addition is of the same height as the old hotel, and provides 185 additional bedrooms, also a ball room 46 x 96 ft., a banquet room about the same size, a grill room 38 x 46 ft., and 11 private dining rooms. The old kitchen has been newly equipped and more than doubled in size by extending it into the addition. In order to have a rear entrance for the use of the hotel servants and for receiving hotel supplies, a new subway has been provided under the tracks, connecting Point Douglas Ave. with an entrance to the hotel basement; this subway has a 17 ft. driveway, with a 15 ft. sidewalk at the side, which also serves as a trucking way to the baggage lifts previously mentioned.

The work was designed and executed by Westinghouse, Church, Kerr & Co., engineers and constructors of New York and Montreal, in co-operation with and under the direction of J. G. Sullivan, Chief Engineer, and Frank Lee, Principal Assistant Engineer, Western Lines, Canadian Pacific Ry. Construction work on the addition to the hotel was started in June, 1913; and the track elevation work and

Canadian Pacific Railway Station and Part of General Offices, Winnipeg, from the South.

they will be found in one or, at most, two adjoining groups. More than 1,200,000 pieces of baggage are handled at this station in a year.

At the west end of the station area, the former eight tracks and platforms were carried over Main St. on a reinforced concrete arch viaduct of five spans. This structure was removed and replaced by the C.P.R. at an expense of over \$100,000, in order that the city might reduce the street

were carried on in the same order until the sixth, or final stage, when all three stub end tracks were abandoned and replaced by three new tracks. For handling passengers and baggage across the stage under construction, between the old and the new high level platforms, temporary ramps and stairways were provided, which were relocated and re-arranged as each new track was completed, and the work was carried on with scarcely any inconvenience to the public.

station improvements in Aug., 1913.

An illustration of the interior of the waiting room is given on pg. 416.

Employees of the Grand Trunk Motive Power Department, Point Charles, Montreal, sent a cheque, Oct. 7, for \$1,388.40 to the Canadian Overseas Red Cross Fund to provide comforts for men at the front, and a cheque for a smaller amount to the Christmas Gift Fund for Soldiers.

# The Canadian Northern Railway's Use of Toronto Union Station.

MR. HENRY L. DEAYTON, Chief Commissioner, Board of Railway Commissioners, gave the following judgment, Sept. 24, which was concurred in by Commissioners McLean and Goodeve:

The question of the facilities that the Grand Trunk Ry. must provide the Canadian Northern Ry. in Toronto union station has been several times before the Board. Apparently the underlying cause of the present difficulty, or at least the reason why the present issue was raised, is the non-pay-

An agreement was arrived at on Nov. 7, 1906, between the companies. Paragraph 5 of the memorandum which evidences it is as follows:

"5. The following is made as a temporary arrangement, viz.: The Canadian Northern Ontario to have the right to run its passenger trains to and from the union station, Toronto, on the Grand Trunk track from and to the said point of connection between the lines at the Canadian Northern Ontario freight yards under the usual terms relating to similar rights given by one company to another. For this right the Canadian Northern Ontario shall pay the Grand Trunk as follows, viz.: For use of tracks of

The memorandum also makes the provisions of the Winnipeg agreement between the Canadian Northern and the Grand Trunk Pacific Railway Companies relative to liability in case of accidents and damages, applicable to the Toronto situation.

A joint application was subsequently made by the Grand Trunk and Canadian Pacific requiring the Board to settle the amount of money to be paid by the Canadian Northern and other terms and conditions. The Board's judgment on this appli-

General Waiting Room, Canadian Pacific Railway Station, Winnipeg.

ment of and disputes as to rendered accounts.

The rights of the Canadian Northern appear in the first instance to have been secured by order 356, Feb. 23, 1905, paragraph 6 being as follows:

"That the applicant company make provision in the present union station for the passenger trains and traffic of the James Bay Ry. Co. as soon as the said company requires the use thereof, and until the proposed new union station hereby authorized is completed and ready for use, which provision and accommodation shall be paid for by the James Bay Ry. Co. on such terms as may be agreed upon between it and the applicant company; and, in case the interested companies cannot agree on the amount to be paid, or on other terms and conditions, the points in dispute shall be settled by order of the Board."

Grand Trunk for said temporary arrangement the charge shall be \$1 for each baggage, mail, express coach and sleeping car entering the union station, and the same amount for each such car departing from the station, and subject to the consent of the Canadian Pacific there shall be another charge of \$1 for each such car to cover the use and service of the station, the total charge to the Canadian Northern Ontario being \$2 per each such car to cover use of tracks and use and service of said station, each way on cars arriving and departing from station."

"6. The payments above mentioned shall cover all charges against the Canadian Northern Ontario under this temporary arrangement, including share of maintenance, operating expenses, station use, including switchmen, ticket agent, and other employees, rental, and for such payments the Canadian Northern Ontario shall be entitled to all proper services and accommodation."

cation, delivered June 1, 1909, refused the application, which was to increase the payments to be made by the Canadian Northern; and directed that the agreement of Nov. 7, 1906, should govern. The Board did not pass upon the issue one way or the other as to whether the prices fixed by the agreement were just; but, recognizing that the whole arrangement was merely of a temporary character, determined to continue it until such time as the union station was completed. The judgment was carried into effect by order 7199, which provides that the Canadian Northern shall continue to pay the Grand Trunk for the use of the present union station and yards, the amount

agreed upon between these companies under the agreement of Nov. 7, 1906.

No further application was made to the Board until March, 1915, when the Canadian Northern complained that the Grand Trunk had notified it that on and after March 26 it would not take care of the Canadian Northern equipment and locomotives arriving on passenger trains at the union station. The Board thereupon made an ex parte direction that the services and facilities extended to the Canadian Northern at the union station and yards in the past should be continued until after a hearing, which took place in Toronto March 30, 1915. At this hearing, the claims advanced by the Grand Trunk were that the Canadian Northern had not paid a bill since March or April of 1907. On the other hand, the Canadian Northern claimed that the Grand Trunk Pacific had not paid the Canadian Northern a cent of rental at Edmonton since Nov. 22, 1909. Mr. Fritch (Assistant to President and now also General Manager, Eastern Lines, Canadian Northern) stated that as a railway, the Canadian Northern did not owe the Grand Trunk as much as the Grand Trunk owed the Canadian Northern. He also said: "We are willing to pay their bills promptly as soon as accounts are rendered," and a direction was made at the hearing for a temporary continuance of the service, until such time as the Board's Chief Engineer and Chief Operating Officer could go into the whole question of the actual operation at the union station.

The Chief Operating officer on April 15 made his report as to the conditions, which was concurred in by the Chief Engineer. This report states that, after going into the matter carefully with the companies, he finds that the Grand Trunk makes no complaint as to the question of the service in the union station or in the movement of Canadian Northern trains between Don Jct. and the union station, and points out that as this is the case there is no question of a public service being affected; and, therefore, recommends that the case is one which the railway companies should settle between themselves. Copies of the report were sent to both companies, and on April 27 the Grand Trunk requested that the case should be set down for hearing on May 4, claiming that no overtures had been made by the Canadian Northern. The case was accordingly listed for hearing. On receipt of a letter from Mr. Fritch stating that his company was prepared to meet the Grand Trunk, with a view to adjusting the differences, the case was struck off the list.

No negotiations apparently took place between the companies, nor was anything done beyond the fact that both companies wrote to the Board complaining that each owed the other large sums of money; but, on Sept. 3, the matter was again brought to a head by the Grand Trunk refusing to supply the Canadian Northern with water for cleaning cars, or to permit the Canadian Northern to lay pipes on Grand Trunk property through which water could be brought for cleaning purposes; and the Canadian Northern asked for a direction that the water service be continued. The Board's direction to continue the service was given on Sept. 10, and the case set down for hearing on Sept. 14. At this hearing, Mr. Fritch stated that a meeting had taken place between the officials of the two companies and that statements were gone into, with the result that it was found that the indebtedness of the Canadian Northern to the Grand Trunk was \$1,364,912, and the indebtedness of the Grand Trunk to the Canadian Northern \$1,104,955, leaving a balance in favor of the Grand Trunk of \$259,957, subject to further reductions and adjustments arising out of the Edmonton

situation. Mr. Fritch further stated:

"A promise was made to the Grand Trunk people that shortly after Aug. 1 we would make them a substantial payment on account. Mr. Hanna, our Vice President, went west a few weeks ago and had just returned, and it is his purpose to carry out that promise. That is as far as the financial arrangement is concerned."

The report of the Chief Operating Officer was not challenged by the Grand Trunk, so that the Canadian Northern's right to run its trains along the front and into and out of the union station is not in question. On the other hand, it is confirmed by the arrangement which the Grand Trunk is now willing to enter into, as evidenced by the following telegram from Mr. Kelley (Vice President, G.T.R.) to Mr. Fritch:

"We will permit without trackage charge the movement of your passenger equipment made empty at union station, Toronto, to your proposed coach yard at Rosedale, and also movement of your empty passenger equipment from your proposed coach yard at Rosedale to the union station when destined for passenger trains leaving that station, this to continue as a temporary arrangement the same as your present use of the union station and subject to the same limitations."

This telegram was in reply to a telegram from Mr. Fritch to Mr. Kelley asking if free trackage would be given on deadhead equipment in and out of the union station.

It appeared to the Board that it would be very much cheaper for the Canadian Northern, and prevent the different street crossings and railway tracks being subjected to an unnecessary use, if all the work incidental to cleaning cars, coaling locomotives, and making up trains, was continued to be done by the Grand Trunk, under the verbal arrangement which it was stated that the companies had entered into. Although the position was taken by Mr. Chisholm, who appeared for the Grand Trunk, that the Board had never taken the position that it could order one company to supply another with coal or even water, a direction was made that the supply of water should be continued, on the payment by the Canadian Northern of \$10 a month for the service; and the Canadian Northern was asked to define exactly what work it would like the Grand Trunk to perform for it and at what prices; and at the same time give the Board information on the question of payments and what instalments on account would be furnished. Mr. Fritch has since supplied the Board with details of the service required, including a tariff at which the work should be done. This service includes, not only cleaning of cars of all kinds and trucks, but ice, water, lubricating and illuminating oil, waste, lamp wicks, lamp chimneys, supplies, and inspection and air brake testing. It also includes certain repairs to equipment. The communication, however, did not make any reference to the matter of payment of arrears, which are, although considerably less than originally claimed, substantial. Mr. Fritch, on being written to requiring that his company should submit a statement of what it proposed to do regarding the payments to the Grand Trunk, advised the Board that he was unable to state the exact date or amount that his company was able to pay, but that it was the intention to do everything possible in the near future to make a substantial payment on account of the union station yard indebtedness. Under these circumstances, it is impossible for the Board to do anything further in relief of the Canadian Northern. The result is that the Canadian Northern trains will continue to run into and out of the union station as heretofore, but that the services which the Grand Trunk has been giving the Canadian Northern apart from any order of the Board, such as the furnishing of water supplied for the cleaning of equipment, and repairs, will no longer continue. I regret the result, as the Grand Trunk would be able to do the work cheaper than the Canadian Northern

will be able to do it, but, in view of the Canadian Northern's neglect, or perhaps inability, to make the Grand Trunk at least a substantial payment on account of its indebtedness, I am of the opinion that it is impossible for the Board to add to any of the orders already made. A further result is that the deadhead equipment of the Canadian Northern will be moved from the union station to its own yards on the terms agreed to by Mr. Kelley in his telegram.

### Suits Respecting the Building of the Great Northern Railway of Canada.

Judgment has been reserved by the Quebec Appeal Court in the action of Smith, Barry and McRae against John Hyde, liquidator of the Great Northern Construction Co. The plaintiffs built 88 miles of this line easterly from Hawkesbury, Ont., towards Joliette, Que., on which they claimed there was a balance of about \$200,000 due. In Nov., 1914, the courts awarded them \$63,886. Against this decision both parties appealed, and the Appeal Court after hearing arguments reserved judgment.

An action is before the Quebec Supreme Court, in which John Hyde, liquidator of the Great Northern Construction Co., is the plaintiff, and J.G.Scott is the defendant. This is a test case, several other actions of a similar character having been entered. The plaintiff company was formed in West Virginia, for the purpose of constructing a railway in extension of the old Laurentian Ry. from near Joliette, Que., to Hawkesbury, Ont. The contract was entered into with the Great Northern Ry. in May, 1899, and subsequently a contract was entered into by the construction company, by which Smith, Barry and McRae were to build the line. The construction company received cash, bonds and stock from the railway company, and after having paid considerable sums to the actual builders of the line, distributed the balance among its shareholders. The actual builders claimed further sums, and the construction company having no funds, went into liquidation. The liquidator claims that the shareholders of the construction company wrongfully received the railway company's bonds, and now seeks to recover them. The face value of the bonds in the case against J.G.Scott, is \$6,000.

The line in question now forms part of the Canadian Northern Ry. System.

**Inspection of Grand Trunk track.**—The officials of the G.T.R. maintenance, operation and construction departments began an inspection trip over the company's lines on Oct. 7, leaving Toronto by a special train having at its rear end an observation car fitted with electric indicators and other appliances for recording the decisions of the experts as they journeyed over the lines. This car was fully described and illustrated in Canadian Railway & Marine World for April 1915. H.R.Safford, Chief Engineer, was accompanied on the trip by M.S.Blaiklock, Engineer of Maintenance of Way, the general superintendents, superintendents of divisions, track supervisors, inspectors of bridges and buildings, signal engineer, supervisors of signal, track foremen, and others. Each division on the system was carefully scrutinised and a record kept of the results.

**The busiest passenger station in England** is said to be the Liverpool St. terminus of the Great Eastern Ry., in London. During the 24 hours there are over 1,400 passenger trains handled in and out; no less than 278 trains carrying over 75,000 passengers being handled inward, between 6 and 9.30 every morning.

# Railway Mechanical Methods and Devices.

## Milling Shoes and Wedges in Grand Trunk Railway Shops at Stratford.

All the shoes and wedges made in the G.T.R. shops at Stratford, Ont., are manufactured on a horizontal milling machine, the jig shown in the accompanying illustration being used for both. The jig, it will be observed, is a double decked casting, the lower face planed and with a longitudinal

much superior to the older practice from the standpoint of tool renewal. The body is brass shell, cast with the central pin hole and roller cavities as cores. The body is turned on the outside, and the central core reamed out, but the roller cavities are left as cored, and as a perfect fit is not essential, they answer the purpose quite as satisfactorily as the usual type. Instead of the spring band around the outside, there is a cast band, with a 1-16 in. slot over each of

of vertical fingers, knife-edged on the inner face, into which the hose and coupling are depressed, with the knife edges entering the slight space between the hose end and coupling shoulder. Turning on the air forces the plunger out, stripping the hose from the coupling. The other coupling at the opposite end is handled in the same manner, only no auxiliary nut is required, as the shape of the coupling lends itself to gripping in behind the folding arm.

Removing Air Hose Couplings.

Jig for Milling Shoes and Wedges.

rib to fit in the miller table, and with bolt holes, while the upper face is also finished with cross ribs to act as stops for the shoes and wedges placed thereon. For the wedges there are three pairs of adjustable studs to raise the wedge end for the requisite taper. The practice is to first mill off the back of the shoes and wedges, then place in this jig, which will hold three, placing two jigs end for end to take a total of six. A combination cutter will then finish the three inside faces and four outside ones in one pass. This jig has been found to be a great

the rollers to clear the dirt, which maintains the rollers in position. The rollers are inserted in the tool from the inside in the usual manner.

## Removing Air Hose Couplings in Michigan Central Rd. Shops, St. Thomas.

There is in use in the M.C.R. car shops at St. Thomas, Ont., a handy air operated machine for removing the couplings of air

## Milling Valve Strips in the Grand Trunk Railway Shops at Stratford.

A jig for holding valve strips while having the cross slots for mortising at the corners, and which is of simple design, is in use in the G.T.R. shops at Stratford, Ont., and is illustrated herewith. From the very nature of their lightness and small section they do not offer themselves to rapid handling on the machine, requiring under ordinary conditions to be set up separately for

Tube Expander With a Cast Brass Body.

Jig for Holding Valve Strips for Mating Slots.

time saver, as well as making possible rapid production of interchangeable shoes and wedges.

## Tube Expander in Pere Marquette Railroad Shops at St. Thomas.

The conventional tube expander, consisting of a shell containing 3 rollers with central tapered pin is in almost universal use for fitting tubes into the tube sheets. It is usually made from a solid body, cut from bar stock, with the three roller cavities drilled and reamed out. The P.M.R. shops at St. Thomas, Ont., have a wrinkle that is

hose when the latter require replacement, and which is shown in the accompanying illustration. The power for the machine is obtained from an old air cylinder, mounted on a work bench, adjoining the machine for mounting air hose couplings, which was described in Canadian Railway and Marine World two years ago. On the threaded coupling of the hose, a nut is loosely screwed on, which fits in behind the hinged arm attached to the cylinder head on the left side of the cylinder as shown. The plunger is attached through a head to a fulcrum arm, pivoted at the rear of the table, the free end of which has an arm with a pair

each piece, and correctly aligned. This jig overcomes many of these difficulties of rapid production. It consists of a forged base for attaching to the milling machine table, cross keys on the under face fitting the table slots. On this base is the strip vise, consisting of a channeled section, in which the strip is set, and secured in place horizontally by two set screws, and vertically by the flange screw in the rear, the flange of which bears on the side of the strip, holding down in place. The milling cutter passes over the strip at the right end, which is shown bevelled in conformity to the cutter.

### Radius Attachment for the Shaper.

The accompanying illustration shows a radius attachment fastened to a shaper head, and the same attachment can be used on a planer. It was designed for use in cutting the required profile on the work A,

Radius Attachment for Use on Shaper.

which is made of tool steel and  $\frac{1}{2}$  in. thick. A number of these pieces are set up in the vise and the tool is guided by the master form B. A hardened bushing carried on the stud C runs in this form, the stud on which the bushing is carried being screwed

### Portable Shop Scaffold in Canadian Northern Railway Shops.

The Canadian Northern Ry. has developed a standard portable shop scaffold in its mechanical department, which is illustrated herewith. A large number of shops have scaffolding of various kinds attached to the shop columns or to posts specially provided for that purpose. This type of scaffolding is portable, and is readily moved from place to place on its own wheels.

The vertical frame at each end consists of two  $2\frac{1}{2} \times 2\frac{1}{2} \times \frac{3}{8}$  in. angles, fastened together near the top, and braced midway, with a longer cross brace at the bottom, giving a back to back distance at that point of 40 ins. At the base of each upright there is a 4 in. wheel,  $\frac{3}{4}$  in. thick. Between the back uprights there are cross members of  $2 \times 1\frac{1}{2} \times \frac{1}{4}$  in. angles, at 24 in. centres, which serve as steps to the platform on the opposite side. This latter is of  $1\frac{3}{4}$  in. planking, supported on a knee braced piece of  $2\frac{1}{2} \times 2\frac{1}{2} \times \frac{3}{8}$  in. angle from the front vertical member.

Portable Shop Scaffolding Made of Structural Shapes.

into the slide D which carries the tool. A master form of any shape could be used on the same attachment to machine similar work of various shapes. The slide D works freely in the slide E, which is moved along the small crosshead by means of a screw, as shown in the illustration. The whole attachment can be secured to the shaper by merely tightening three screws.—P. Siebold, in Machinery, New York.

**The Latest Feature in the English Railway field** is the introduction of third class Pullman cars between London and Brighton, and London and Eastbourne.

**Ontario Railway and Municipal Board.**—The ninth annual report for the year ended Dec. 31, 1914, which has been issued recently shows that 618 formal applications were made during the year, upon which orders were made. Of these orders 61 affected street railway interests, the more important being dealt with in Canadian Railway and Marine World at the time they were made.

**The C.P.R. is erecting a kiosk** on the station platform at Moose Jaw, Sask., in which samples of western products will be exhibited. A press report states that similar kiosks will be built at Calgary, Vancouver and other points.

### Birthdays of Transportation Men in November.

Many happy returns of the day to—

F. W. Alexander, A.M. Can. Soc. C.E., Division Engineer, Alberta Division, C.P.R., Calgary, born at Fredericton Jct., N.B., Nov. 22, 1878.

J. O. Apps, General Baggage Agent, C.P.R., Montreal, born at Tara, Ont., Nov. 9, 1877.

A. B. Atwater, Assistant to President, lines west of Detroit and St. Clair Rivers, G.T.R., Detroit, Mich., born at Sheffield, Ohio, Nov., 1845.

H. E. Beasley, General Superintendent, Esquimalt and Nanaimo Ry., Victoria, B.C., born at Hamilton, Ont., Nov. 10, 1862.

O. H. Becker, District Freight Agent, C.P.R., Portland, Ore., born in Norfolk County, Ont., Nov. 19, 1873.

G. B. Burchell, General Manager, Colonial Coal Co., North Sydney, N.S., born at Sydney, N.S., Nov. 1, 1877.

J. R. Cameron, Assistant General Manager, Canadian Northern Ry., Winnipeg, born at Truro, N.S., Nov. 5, 1865.

L. D. Chetham, City Passenger Agent, C.P.R., and District Passenger Agent, Esquimalt and Nanaimo Ry., Victoria, born at Matlock, Eng., Nov. 5, 1869.

F. H. Clendenning, Division Freight Agent, B.C. Coast Service and Ocean Steamship Lines, C.P.R., Vancouver, B.C., born at Montreal, Nov. 9, 1881.

F. Conway, City Freight and Passenger Agent, C.P.R., Kingston, Ont., born at Ernestown, Ont., Nov. 19, 1850.

A. S. Cook, Inspecting Engineer, National Transcontinental Ry., Ottawa, born at Penobscus, N.B., Nov. 20, 1873.

W. L. Crighton, Advertising Agent, Canadian Government Railways, Moncton, N.B., born at Derby, Eng., Nov. 9, 1871.

A. C. Douglas, acting Assistant General Purchasing Agent, C.P.R., Montreal, born at Montreal, Nov. 10, 1881.

W. Downie, ex-General Superintendent, Atlantic Division, C.P.R., now of Whitby, Ont., born at Rock Currie, Ireland, Nov. 12, 1850.

Jos. Dubrule, jr., Manager, Canadian Pacific Car and Passenger Transfer Co., and President, Prescott and Ogdensburg Ferry Co., Ltd., Prescott, Ont., born at Spencer-ville, Ont., Nov. 14, 1872.

R. L. Fairbairn, General Passenger Agent, Canadian Northern Ry., Toronto, born at Stillwater, Minn., Nov. 24, 1880.

W. A. Fitch, Assistant Superintendent, District 3, Intercolonial Ry., Moncton, N.B., born at Kentville, N.S., Nov. 25, 1867.

P. J. Flynn, Superintendent, Districts 2 and 3, Central Division, Canadian Northern Ry., Winnipeg, born at Fishers, N.Y., Nov. 22, 1872.

J. E. Gibault, A.M. Can. Soc. C.E., Resident Engineer, District 2, National Transcontinental Ry., Cochrane, Ont., born at St. Jerome, Terrebonne County, Que., Nov. 16, 1887.

Grant Hall, Vice President and General Manager, Western Lines, C.P.R., Winnipeg, born at Montreal, Nov. 27, 1863.

John L. Hodgson, General Car Foreman, National Transcontinental Ry., Transcona, Man., born at Simcoe, Ont., Nov. 15, 1858.

N. B. Jones, Car Foreman, C.P.R., Kenora, Ont., born at St. John, N.B., Nov. 9, 1869.

W. E. Ladley, Superintendent of Motive Power, Reid Newfoundland Co., St. John's, Nfld., born at Leeds, Eng., Nov., 1875.

C. E. Legg, General Agent, Winnipeg, C.P.R., Fort William, Ont., born in Illinois, Nov. 15, 1864.

F. T. Leversuch, Traffic Manager, London and Port Stanley Ry., London, Ont., born at Shrewsbury, England, Nov. 24, 1884.

J. McGillivray, Receiver and Manager, Inverness Ry. and Coal Co., Inverness, N.S., born at Nairn, Scotland, Nov. 13, 1867.

J. McMillan, Manager of Telegraphs, C.P.R., Montreal, born at Liverpool, Eng., Nov. 8, 1869.

A. J. McNamara, General Yardmaster, Ottawa Terminals, G.T.R., Ottawa, Ont., born at Arnprior, Ont., Nov. 10, 1877.

A. S. Munro, Commercial Agent, G.T.R., London, Ont., born at Hamilton, Ont., Nov. 14, 1888.

C. Murphy, General Superintendent, Manitoba Division, C.P.R., Winnipeg, born at Prescott, Ont., Nov. 20, 1865.

A. C. O'Neil, Travelling Freight Agent, G.T.R., London, Ont., born at Point Edward, Ont., Nov. 30, 1866.

W. J. Quinlan, District Passenger Agent, Grand Trunk Pacific Ry., Winnipeg, born at Montreal, Nov. 21, 1883.

F. E. Rutland, Agent, C.P.R. Stockyards, Winnipeg, born in Essex, England, Nov. 17, 1868.

H. P. Sharpe, General Agent, Dominion Express Co., Toronto, born at Brockville, Ont., Nov. 24, 1864.

G. H. Shaw, General Traffic Manager, Canadian Northern Ry., Toronto, born at Smiths Falls, Ont., Nov. 25, 1859.

J. G. Sutherland, Car Service Agent, Alberta Division, C.P.R., Calgary, born at Aulac, N.B., Nov. 24, 1882.

L. C. Thomson, General Storekeeper, Eastern Lines, Canadian Northern Ry., Toronto, born at Kingston, Ont., Nov. 25, 1882.

H. P. Timmerman, Industrial Commissioner, Eastern Lines, C.P.R., Montreal, born at Odessa, Ont., Nov. 6, 1856.

H. E. Whittenberger, General Superintendent, Ontario Lines, G.T.R., Toronto, born at Peru, Ind., Nov. 9, 1869.

C. G. Washbon, Trainmaster, C.P.R., Brandon, Man., born at Morris, N.Y., Nov. 27, 1887.

## Orders by the Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the orders were issued.

24191. Sept. 17.—Ordering C.P.R. to give up possession of land necessary to enable G.T. Pacific Ry. to build interchange track with C.P.R. near Globe elevator, Calgary, Alta.

24192. Sept. 20.—Authorizing St. John Ry. to cross St. John Bridge & Ry. Extension Co.'s tracks on Douglas Ave., St. John, N.B.; crossing to be protected by half interlocking plant.

24193. Sept. 21.—Authorizing Delburne Village, Alta., to build highway, between n.e. and n.w.  $\frac{1}{4}$  Sec. 21-37-23, w. 4 m., across G.T. Pacific Ry. Tofield-Calgary Branch.

24194. Sept. 21.—Approving Boston & Maine Rd. bylaw Sept. 7, re tariffs of tolls; and rescinding order 14244, July 18, 1911.

24195. Sept. 22.—Approving C.N. Ontario Ry. proposed passenger and freight stations at North Bay.

24196. Sept. 20.—Authorizing Saskatchewan Highway Commissioners on behalf of Canadian Northern Ry. to build highway crossing over station grounds at Turtleford, to be paid by C.N.R.

24197. Sept. 21.—Approving Oshawa Ry. bylaw Sept. 13, re tariffs of tolls.

24198. Sept. 13.—Ordering C.P.R. to build passenger shelter station at Hatzic, B.C., consisting of waiting room not less than 12 x 15 ft.; and office for agent; to maintain agent there during June, July, August and September each year, and during remainder of year to keep waiting room clean, heated and lighted, for passengers.

24199. Sept. 20.—Providing for cost of building Canadian Northern Ry. Birds Hill line across power transmission line and patrol road of City of Winnipeg.

24200. Sept. 20.—Approving Canadian Northern Ry. Standard Mileage Tariff C.R.C. no. W862, cancelling C.R.C. no. W793.

24201. 24202. Sept. 21, 20.—Approving London & Port Stanley Ry. plan R.C.15-56, and authorizing it to build siding to McClary's under Bell Telephone Co.'s wires; and also to cross London St. Ry. and its overhead structure at South St., London, Ont.

24203. Sept. 21.—Authorizing C.P.R. to open for traffic its Coronation Northwest Branch, mileage 0 to 18.6, Alta., speed of trains limited to 15 miles an hour over first 12 miles, and 10 miles an hour over the remainder.

24204. Sept. 21.—Authorizing C.P.R. to build spur for Graves Bigwood Co., at mileage 52.6, Sudbury Subdivision, Ont.

24205. Sept. 21.—Approving Thousand Island Ry. bylaw Sept. 13, re tariffs of tolls.

24206. Sept. 22.—Amending order 23968, July 14, re farm crossing over G.T.R. on Lot 15, Broken Front Concession, Tilbury North Tp., Ont.

24207. Sept. 22.—Authorizing Kettle Valley Ry. to open for traffic its line from mileage 31, west of Coquihalla Summit to mileage 39.53 at connection with C.P.R. near Hope, B.C.; and rescinding order 24133, August 30.

24208. Sept. 22.—Ordering C.P.R. to fence its right of way from mileage 32.5 to 32.7, Kingston Subdivision, at Folger, Ont.; and rescinding order 17667, Oct. 4, 1912.

24209. Sept. 23.—Authorizing London & Port Stanley Ry. to take Lot 1 on south side of Philip St., and Lot 1 on north side of Trafalgar St., London, Ont., for railway purposes.

24210. Sept. 22.—Extending to Oct. 15, time within which G.T.R. shall complete siding and freight shed at Ratho, Ont.

24211. Sept. 23.—Authorizing Kettle Valley

Ry. to cross C.N. Pacific Ry. at Hope, B.C., for construction purposes only, until Nov. 30, the trains to be flagged over crossing by flagman appointed by C.N.P.R. at expense of K.V.R.

24212. Sept. 24.—Approving Edmonton, Dunvegan & British Columbia Ry. revised location through Tps. 77 and 78, R. 23 and 24, w. 5 m., Alta., between mileage 286.34 and 297.24.

24213. Sept. 22.—Amending order 20621, Oct. 18, 1913, re G.T.R. siding for St. Marys Portland Cement Co., Blanshard Tp., Ont.

24214. Sept. 23.—Approving revised location of G.T. Pacific Branch Lines Co.'s Moose Jaw Northwest Branch and land required for station grounds in s.w.  $\frac{1}{4}$  Sec. 21-21-4, w. 3 m., Moose Jaw District, Sask.

24215. Aug. 21.—Authorizing Canadian Northern Ry. and Edmonton, Dunvegan and British Columbia Ry. to build interchange track at Morinville, Alta.; switches to be wire locked with distant signals.

24216. Sept. 23.—Authorizing Dominion and Ontario Governments to build highway over Canadian Northern Ry. west of Beauceage station, near North Bay, Ont., and rescinding order 24109, Aug. 19.

24217. Sept. 25.—Ordering G.T.R. to remove trees obstructing view of track at crossing of Ridge Road, Oro Tp., Ont., and to build east approach on Concession Road in accordance with Standard Regulations.

24218. Sept. 27.—Authorizing C.P.R. to build connecting track between Kootenay Central Ry. and British Columbia Southern Ry. in Lot 324, Kootenay District, B.C.; and authorizing it to cross Government Road.

24219. Sept. 27.—Authorizing C.P.R. to build road diversion in n.e.  $\frac{1}{4}$  Sec. 28-19-3, W. 2 M.; and across its Neudorf Subdivision, mileage 95.1, Sask.

24220. Sept. 24.—Authorizing G.T.R. to build extension to North American Chemical Co.'s siding, Goderich, Ont.

24221. Sept. 27.—Approving Canadian Northern Ry. crossing of May St., Port Arthur, Ont.

24222. Sept. 27.—Authorizing G.T.R. to build siding with spur for Empire Sand, Gravel & Crushed Stone Co., on Lot 22, Con. 3, Vaughan Tp., Ont.

24223. Sept. 27.—Approving location of C.P.R. proposed shelter station at Moredolphton, Ont.

24224. Sept. 27.—Authorizing Dominion Atlantic Ry. to build bridge over Little Joggins River, Digby County, N.S.

24225. Sept. 28.—Approving Kettle Valley Ry. Standard Passenger Tariff of Sleeping and Parlor Car Tolls, C.R.C. no. S-2.

24226. Sept. 27.—Authorizing Quebec Oriental Ry. to rebuild overhead highway bridge at mileage 64 on R. 5, Richmond tp.

24227. Sept. 27.—Approving Canadian Northern Ry. bylaw re tariffs of tolls for all passenger traffic that may be carried on its system, excepting to and from points west of Port Arthur and West Port.

24228. Sept. 27.—Ordering Canadian Northern Ry. to build farm crossing at station 268-50, on s.w.  $\frac{1}{4}$  Sec. 25-53-8, w. 5 m., at mileage 75 west of Edmonton, Alta.

24229. Sept. 28.—Amending order 24175, Sept. 15, re C.P.R. extension to siding for Cataract Jct. Sand & Gravel Co., Cataract Jct., Ont.

24230. Sept. 28.—Amending order 24203, Sept. 21, re opening for traffic of C.P.R. Coronation Northwest Branch, Alberta.

24231. Sept. 28.—Authorizing C.P.R. to build sidings for Canadian Explosives, Ltd., at Nobet, Ont.

24232. Sept. 28.—Authorizing C.P.R. to build sidings for Aetna Chemical Co. of Canada, Ltd., at Drummondville, Que.

24233. Sept. 28.—Ordering C.P.R. to install hand operated gates, known as "jackknife" style, at crossing of Talbot Ave., Winnipeg; to be operated by day and night watchmen; cost of installation and maintenance to be paid by City of Winnipeg.

24234. Sept. 28.—Amending order 24168, Sept. 3, re G.T. Pacific Ry. road diversion in Saskatchewan.

24235. Sept. 28.—Ordering London & Port Stanley Ry. within 60 days to install improved type of automatic bell at first crossing north of Port Stanley, Ont., 20% of cost to be paid out railway grade crossing fund.

24236. Sept. 27.—Dismissing London, Ont., Board of Trade's complaint against alleged discrimination shown in favor of Toronto in express charges from that city as compared with those charged from London, Ont.

24237. Sept. 29.—Authorizing C.P.R. to build highway to connect west and north boundaries of Sec. 21-20-7, and to connect south boundary Sec. 29-20-7, w. 2 m., Sask., and east boundary Sec. 29; and to build one square level highway crossing at mileage 122.1, Neudorf Subdivision, in lieu of crossing of above mentioned road allowance which crossings are to remain closed.

24238. Sept. 27.—Authorizing Canadian Northern Ry. to build spur for Premier Coal Co., Drumheller, Alta.

24239. Sept. 29.—Dismissing complaint of N. J. Epstein, Montreal, against Bell Telephone Co. re treatment in connection with account for long distance calls.

24240. Sept. 28.—Authorizing C.N. Ontario Ry. to open up Second Concession road allowance over its right of way in Goulburn Tp., to be completed by Oct. 31.

24241. Sept. 27.—Dismissing Canadian Manufacturers' Association's complaint that railway companies insist on charging 4th class rate on salted meats, in carloads, instead of 5th class.

24242. Sept. 30.—Refusing D.G. Mathias' application for rate of \$1.10 on dried fruit from San Francisco, Cal., to Fort William, Ont.

24243. Oct. 1.—Recommending to Governor in Council for sanction, lease between C.P.R. and Shuswap & Okanagan Ry. Co., Aug. 9.

24244. Sept. 30.—Amending order 24031, July 19, re operation of interlocking plant near Diltz, Moncton Tp., Ont., by G.T.R. and Toronto, Hamilton & Buffalo Ry.

24245. Oct. 1.—Authorizing Lake Erie & Northern Ry. to operate for construction purposes only, over crossing of G.T.R. at station 7-23, Brantford, Ont., for six months from date.

24246. Oct. 1.—Authorizing Michigan Central Rd. to build siding for Norton Co., Chippewa, Ont.

24247. Sept. 23.—Authorizing Lochill Tp., Ont., to build highway crossing over G.T.R. at road allowance between Lots 17 and 18, Con. 2, to be completed within 60 days from date, to be paid by G.T.R.

24248. Oct. 1.—Authorizing C.P.R. clearance between tracks and operator's window at Winnipeg, Man.

24249. Oct. 1.—Authorizing C.P.R. to build siding for F. Canac-Marquis, Quebec, Que.

24250. Oct. 1.—Authorizing C.P.R. to build extension to siding of Austin & Nicholson, mileage 24.1, White River Subdivision, Ont.

24251. Sept. 28.—Ordering C.P.R., G.T.R., and C.N. Ontario Ry. to prohibit whistling by those in charge of any locomotive operating within Toronto city limits; whistling to be allowed only where deemed necessary by those in charge, as a danger signal; any person offending against this regulation to be liable to penalty of \$10 for each offence, and rescinding order 24062, Aug. 3.

24252. Sept. 29.—Amending order 24206, Sept. 22, re farm crossing over G.T.R. on Lot 15, Broken Front Concession, Tilbury North Tp., Ont.

24253. Oct. 1.—Relieving G.T. Pacific Branch Lines Co. from erecting fences, gates and cattle-guards on certain portions of its Biggar-Calgary Branch, mileage 0 to 104, Sask.

24254. Oct. 2.—Approving Canadian Northern Ry. Standard Passenger Tariff, C.R.C. no. W-1283, showing rate of 3c a mile, Edmonton to and including Tollerton, Alta., and 4c a mile west of Tollerton, to and including Vancouver, B.C.

24255. Sept. 30.—Ordering Halifax & South Western Ry. to replace board along tops of posts, or string new wire in lieu of board on fence along right of way from Lower Argyle, to Argyle, N.S., mileage 223.9 to 229.3, to be completed by Nov. 30.

24256. Sept. 28.—Authorizing C.N. Ontario Ry. to cross Timiskaming & Northern Ontario Ry. at North Bay, Ont.; C.N.O.R., under supervision of T. & N.O.R. engineer, to insert diamonds in T. & N.O.R. tracks; crossing to be protected by interlocking plant; derails and home and distant signals to be placed on both lines on each side of crossing; derails to be interlocked with signals; normal position of signals to be at danger.

24257. Sept. 30.—Amending order 23864, June 15, re watchman at Erie & Ontario Ry. (T.H. & B.R.) and M.C.R. crossing at Attercliffe, Ont.

24258. Oct. 2.—Authorizing residents of Fallis, Alta., to build highway over G.T. Pacific Ry., 200 ft. east of Main St.

24295. Oct. 7.—Approving specifications and plans of Big Creek drain, in so far as they affect lands of Canada Southern Ry. (M.C.R. and C.P.R.) in Tilbury North Tp., Ont.

24296. Oct. 9.—Approving location and details of Montreal & Southern Counties Ry. proposed station at Abbotsford, Que.

24297. Oct. 9.—Authorizing C.P.R. to build spur and siding for J. Brodie & Son, at mileage 121.8, Laurentian Subdivision, Que.

24298. Oct. 9.—Amending order 24216, Sept. 23, re Dominion and Ontario Governments highway over Canadian Northern Ry. at Beaucage station, near North Bay, Ont.

24299. Oct. 9.—Amending order 24219, Sept. 27, re C.P.R. road diversion at mileage 95.1, Neudorf Subdivision, Sask.

24300. Oct. 9.—Authorizing Dominion Atlantic Ry. to use bridge over Little Joggins River, Digby County, N.S.

24301. Oct. 13.—Authorizing British Columbia Government to build highway crossing over G.T. Pacific Ry. west of west switch at Vanarsdol.

24304. Oct. 6.—Authorizing Toronto Hydro-Electric System to erect wires across G.T.R. at corner of Carlaw Ave. and Gerrard St.

24305. Oct. 12.—Relieving Michigan Central Rd. from providing further protection at Park St. crossing, east of St. Thomas, Ont.

24306. Oct. 12.—Authorizing G.T. Pacific Branch Lines Co. to carry traffic over portion of its Cutknife Branch, Battleford, mileage 0 to 50, Sask.; speed limited to 15 miles an hour; and rescinding order 20513, Oct. 7, 1913.

24307. Oct. 12.—Approving Canadian Northern Ry. Standard Tariff of Sleeping and Parlor car tolls, C.R.C. no. S-2.

24308. Oct. 9.—Authorizing C.P.R. to build siding for Corrugated Paper Co., North Toronto.

24309. Oct. 9.—Authorizing C.P.R. to build highway across its Neudorf Subdivision, Sask., at two points, at mileage 9.5 and mileage 69.9, and to close portion of road allowance along n.e. 1/4 and east boundaries of Sec. 11, which lies within limits of railway right of way.

24310. Oct. 9.—Relieving G.T. Pacific Branch Lines Co. from erecting fences, gates and cattleguards on its Tofteld-Calgary Branch, Alta., mileage 11.36 to 194.39.

24311. Oct. 15.—Extending to Nov. 30, time within which C.P.R. shall complete branch for Empire Waterworks Supply Co. of Canada, Victoria, B.C.

24312. Oct. 14.—Authorizing G.T.R. to build sidings and spurs, to serve Toronto and Hamilton Highway Commission, along and across certain highways in Port Credit, and extending to Port Credit Land Co.'s premises, leased to the Commission.

24313. Oct. 16.—Suspending, pending hearing by Board, advanced rates on apples and potatoes to Halifax for export, as published in Dominion Atlantic Ry. Tariffs, C.R.C. 454 and 455, to become effective Oct. 25.

24314. Oct. 15.—Authorizing British Columbia Public Works Department to build highway crossing over G.T. Pacific Ry. east of east switch at Usk.

24315. Oct. 15.—Ordering Toronto, Hamilton and Buffalo Ry. to provide farm crossing, with gates, for T. Embury, Jerseyville, Ont., applicant to do grading and pay \$10 toward cost.

24316. Oct. 15.—Ordering Campbellford, Lake Ontario & Western Ry. (C.P.R.) to build farm crossing for E.H. Armstrong, Camden Tp., Ont., half cost, excepting gates, to be paid by applicant.

24317. Oct. 15.—Authorizing Town of Radville, Sask., to build highway crossing over Canadian Northern at First St. East, crossing between Sec. 7-6-17, and Sec. 12-6-18, w.2.m., to be closed, cost of maintaining crossing to be paid by C.N.R.

24318. Oct. 15.—Approving agreement between Bell Telephone Co. and Southwold & Dunwich Telephone Association, Ltd., Sept. 7.

24319. Oct. 15.—Authorizing Canadian Northern Ontario Ry. to open for traffic its line from Pembroke to Capreol; and from Ruel to Port Arthur.

24320. Oct. 18.—Authorizing G.T.R. to build

siding for Toronto Furniture Co., Mowat Ave., Toronto, and approving clearances there.

24321. Oct. 16.—Ordering Michigan Central Ry. to build proper approach to station at Shedden, Ont., from north and south.

24322. Oct. 16.—Authorizing Canadian Northern and C.P.R. to operate over crossing in n.w. 1/4 Sec. 13-2-8, w.2.m., Sask., without first stopping.

24323. Oct. 16.—Dismissing application of L. H. Congreave, Sicamous, B.C., for order directing C.P.R. to designate suitable place on platform for receiving guests for his hotel.

24324. Oct. 15.—Ordering C.P.R. to install improved type automatic bell at crossing in Mono Road, Ont., and to maintain bell; work to be completed as soon as weather conditions permit in spring; 20% of cost to be paid out of railway grade crossing fund.

General Order No. 149, Sept. 14.—Approving terms and conditions of telephone connection by Bell Telephone Co., with municipal corporations, independent telephone companies or systems.

### Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,296,100	\$921,000	\$375,100	x\$145,400
Aug.	1,192,800	864,000	328,800	x3,000
Sept.	2,014,600	1,358,900	661,600	1,900
	\$4,413,600	\$3,227,000	\$1,186,600	x\$79,300
Decr.	x\$658,300	\$579,000	\$79,300	.....

Mileage in operation at Sept. 30, 1915, 4,965, against 4,670 at Sept. 30, 1914.

Commencing with Oct. 1, the figures quoted represent the earnings of the entire system instead of those of the western lines only.

Approximate earnings of the system for three weeks ended Oct. 21, \$2,407,100, against \$1,871,390 for same period 1914.

### Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$7,895,375.47	\$5,094,972.35	\$2,800,403.12	x\$978,042.71
Aug.	8,801,451.52	5,359,136.80	3,442,314.72	79,157.02
	\$16,696,826.99	\$10,454,109.15	\$6,242,717.84	x\$888,886.69
Dec.	\$3,702,909.11	\$2,804,023.42	\$898,885.69	.....

xDecrease.

Approximate earnings for September, \$9,995,000, and for three weeks ended Oct. 21, \$3,971,000, against \$10,479,000 and \$6,539,000 respectively for same periods in 1914.

### Grand Trunk Railway Earnings, Etc.

The following figures show the earnings for the G.T.R. (including the Canada Atlantic Ry.), the G.T.W.R. and the D.G.H. & M.R. from Jan. 1 to Sept. 30:

	1915	1914	Incr	Decr.
G.T.R. ....	\$29,451,739	\$32,029,026	.....	\$2,577,287
G.T.W.R. ....	5,458,739	5,358,626	\$100,113	.....
D.G.H. & M.R. ....	1,978,379	1,852,241	126,138	.....

Totals .... \$36,888,857 \$39,239,893 ..... 2,351,036

Approximate earnings for September, \$4,605,041, and for three weeks ended Oct. 21, \$3,130,733, against \$4,671,561 and \$2,990,076 respectively for similar periods in 1914.

### Grand Trunk Pacific Railway Earnings

The approximate earnings of the Prairie Section, 916 miles, for September were \$403,888 against \$506,012 for Sept., 1914. Aggregate earnings for three months ended Sept. 30, \$884,976, against \$1,213,073 for same period 1914.

### Railway Lands Patented.—Letters patent

were issued respecting Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, during September, as follows:

	Acres
Calgary and Edmonton Ry. ....	480.00
Canadian Pacific Ry. ....	342.158
Edmonton, Dunvegan and British Columbia Ry. ....	60.67
Grand Trunk Pacific Branch Lines Co. ....	6.38
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co. ....	1,920.00

Total ..... 2,809.208

## Canadian Pacific Railway Company's Annual Meeting.

The 34th annual meeting was held at Montreal, Oct. 6. Sir Thos. G. Shaughnessy, President and Chairman of the company, who presided, in moving the adoption of the report which was printed in Canadian Railway and Marine World for September, said:

The annual statement of your affairs now before you for consideration and approval is, in some respects, the most unsatisfactory that has been submitted for a number of years past. The shrinkage of \$31,000,000 in the gross earnings of your railway system as compared with the previous year is very marked; indeed it is in excess of your entire gross earnings in the year 1901, but the fact that notwithstanding this great falling off in revenue your regular dividend was earned is unquestionable evidence of your foresight and wisdom in having made such expenditures during the past 10 or 12 years as to enable you to make a saving in your working expenses representing such a substantial offset to the loss of gross revenue.

The physical condition of your property has never been better than it is at this time, the reduction in the cost of maintenance of way for the year being due very largely to a favorable winter and to the fact that works of betterment, chargeable in considerable part to working expenses, were completed before unfavorable business conditions appeared, and the additional facilities for the conduct of your business provided by your expenditures made it possible for you to handle your traffic more expeditiously and economically. As an illustration, the number of tons of freight traffic hauled one mile in the year covered by the report was 22% greater than in 1905, but it required only 17% additional train miles to perform the service. Improved gradients, double tracks, better terminal facilities, larger locomotives and cars, enabled you to earn \$3.17 per freight train mile in the last year as against \$1.93 in 1905, an improvement of 64%, although there had been a substantial reduction of freight rates in the meantime. Taking everything into account I feel that we may accept the outcome of the year as evidence of the strongly entrenched position of the company, and may look forward to the future with buoyant confidence.

In these days, when so many nations are engaged in a bloody and expensive war, when the financial machinery of the world is out of gear and general business conditions are disturbed, it is not wise to make predictions, but everything points to marked improvement in your revenue during the current fiscal year. The country has been blessed with a most bountiful harvest, and while the price of wheat is lower than it was a year ago it is still above the average, and conditions prevailing abroad should cause a continued demand for this and many of our other products. Conservatively estimated, the field crops harvested this autumn in the four provinces west of Lake Superior will yield per capita to the rural population in these provinces more than twice as much money as the rural population of the eight states directly south of them received per capita for their field crops in 1914. With agriculture as the most important pedestal of our prosperity any substantial addition to the income, and therefore to the buying power of the agricultural community, is reflected in every line of trade, so that we have reason to anticipate a decided betterment of the westbound merchandise traffic.

A substantial improvement in your land sales, 77,000 acres in the last three months as compared with 41,000 acres in the same months last year, increased activity in the

mining and smelting industries of Southern British Columbia, larger shipments of lumber from the western mills to the interior, are all encouraging signs, indicating as they do a partial restoration of confidence and a step in the direction of normal times.

It is to be hoped that in anticipation of the close of the war and the new conditions that will come with it, an organization will be perfected for unity of action by the Dominion and provincial governments and the important business interests of the country, looking not only to the largest possible immigration of agriculturists, but to the development, on a more comprehensive scale than ever before, of the vast natural resources of the country, so that the position of Canada may be strengthened to meet the financial obligations of the country resulting from the war and from other causes with which everybody is familiar.

Until the market improves no special effort will be made to dispose of any portion of the 4% consolidated debenture stock, amounting to about \$40,000,000, representing advances made from your treasury for the construction of additional railway mileage, as there is in hand at present sufficient money to meet all your requirements for a considerable period.

The company has suffered severe loss by the death of two of its most valued and esteemed directors. Sir Sandford Fleming, who died July 22, was associated with the Canadian Pacific before the organization of the present company, as Chief Engineer of the Dominion Government, and he became a member of the board of directors of the company in 1885. He attended the meetings of the board with great regularity and took keen interest in the company's affairs until he was seized with the illness that finally proved fatal.

Sir William Van Horne, who passed away Sept. 11, joined the company as General Manager at the end of 1881, and from that time until he retired from the Presidency in 1899 he devoted himself to the administration of the company's affairs with a whole heart and with unbounded confidence. During the period that the through line of railway was under construction and when its early completion was a matter of vital importance, his energy, ability and indomitable courage were of a value that could not be over estimated. He lived to see the enterprise attain proportions quite beyond the most ambitious anticipations of the earlier days. The shareholders as well as his associates on the board of directors will, I am sure, always cherish his memory.

A resolution was passed authorizing the transfer to the Canadian Pacific Ocean Services, Ltd., of the C.P.R. Co.'s holding of shares in the Allan Line Steamship Co., Ltd., and of the C.P.R. Atlantic and Pacific ocean fleets. It is given in full in the Marine Department, farther on in this issue.

It having been announced that three directors, R. B. Angus, Sir Edmund Osler and Sir Herbert Holt retired in rotation and that the vacancy caused by Sir William Van Horne's death required to be filled, the three retiring directors were re-elected for four years and Brigadier General F. S. Meighen, President Lake of the Woods Milling Co., was elected for the same period. The vacancy caused by Sir Sandford Fleming's death was not filled.

The board met immediately after the shareholders' meeting and re-elected Sir Thos. G. Shaughnessy President, and George Bury, Vice President. The following were

appointed as the Executive Committee: R. B. Angus, George Bury, Sir Herbert Holt, Sir Edmund Osler, Sir Thos. G. Shaughnessy.

## Railway Rolling Stock Notes.

The G.T.R. has received 3 automobile cars from its Elsdon, Ill., shops.

Canadian Government Railways have received 10 consolidation locomotives from Canadian Locomotive Co.

The Canadian Northern Ry. has received 7 first class, steel underframe, passenger cars from Canadian Car and Foundry Co.

Canadian Government Railways, between Sept. 14 and Oct. 18, received the following additions to rolling stock: 288 box cars from Canadian Car and Foundry Co.; 188 box cars from National Steel Car Co.; 46 steel flat cars from Nova Scotia Car Works; 11 consolidation locomotives from Canadian Locomotive Co., and one 100 ton wrecking crane from F.H. Hopkins and Co.

Since the commencement of the operation of the National Transcontinental Ry. by the Canadian Government Railways, considerable Intercolonial Ry. rolling stock has been transferred for N.T.R. use. We are officially advised that up to Oct. 11 the following had been so transferred: Locomotives, 52 consolidation, 9 ten-wheel, 10 Pacific, 6 switching and 5 eight-wheel; 41 passenger cars, 2 baggage cars, 3 box-baggage cars, 40 vans, 16 boarding and cook cars, 30 cinder cars, 17 flat cars and 2,050 box cars.

The Union Government of South Africa has ordered 2 steel under frame flat cars for its railways from Canadian Car and Foundry Co. They will be equipped with standard type diamond arch bar trucks, and each car will be fitted with 6 drop bottom coal delivery buckets each of 7 tons capacity. Following are chief details:

Gauge .....	3 ft. 6 ins.
Capacity .....	60 tons
Length over end sills .....	40 ft.
Width over side sills .....	7 ft.
Width over floor .....	8 ft.
Height from rail to floor .....	3 ft. 7½ ins.
Top of rail to centre of drawbar ..	2 ft. 11 ins.
Truck centres .....	26 ft.
Wheel base .....	5 ft. 3 ins.

**Transfer of Quebec and Saguenay Ry. Foreshadowed.**—Sir Rodolph Forget, M.P., was credited with having stated at the Quebec Railway, Light, Heat & Power Co.'s annual meeting in September that he expected to make an announcement shortly thereafter in regard to the sale or transfer of the Quebec & Saguenay Ry. Press reports have since foreshadowed that the line would be taken over either as part of the Canadian Government Railways system or by the Canadian Northern Ry., but up to October 20 no announcement had been made by Sir Rodolph. We were, however, informed on that date by his office that he had left with the Minister of Railways and Canals, and with the General Manager of the Canadian Government Railways, for a tour of inspection of the Quebec & Saguenay Ry. and of all the other subsidiary companies of the Quebec Railway, Light, Heat & Power Co.

**Right of Way at Crossings.**—The Quebec Court of Review has decided that railways have the superior right of way at unprotected crossings. The decision was given in an appeal by the G.T.R. against an award of damages for an accident at a railway crossing near St. Johns, in which two men were killed. The lower court awarded \$7,000 damages in one case and \$5,000 in the other, but the Court of Review held that the persons driving should have "stopped, looked and listened."

### Changes in Canadian Pacific Railway's Ottawa—Toronto Service.

The C.P.R., with the introduction of new time tables on Nov. 1, will inaugurate a new Ottawa-Toronto service by the addition of two new trains to run from the Grand Trunk Central Station at the intersection of Sparks and Rideau Streets, Ottawa. The new service, which will be daily except Sunday, will consist of a train, "The York," leaving Ottawa at 1.15 p.m. and reaching Toronto Union Station at 9.30 p.m. The east bound train, "The Rideau," will leave Toronto Union Station at 1.45 p.m. reaching Ottawa at 10 p.m. These trains will run over the Lake Ontario shore line between Agincourt and Glen Tay, over the Toronto-Montreal main line between Glen Tay and Kempton and over the Prescott subdivision between Kempton and Ottawa. The equipment will consist of baggage car, smoking car, first class car and library observation car with a broiler service.

The ordinary morning train for Toronto will leave Ottawa Central Station at 9.35 daily, going over the Interprovincial Bridge and through Hull, leaving Broad St. Station, Ottawa, at 10 a.m. and running via Carleton Place to Smiths Falls, where it will connect with "The Canadian," from Montreal, running via the Lake Ontario shore line from Glen Tay, and reaching Toronto Union Station at 6 p.m. It will also connect at

Falls will arrive at Ottawa Central Station at 7.40 a.m. via Kempton.

There will also be a greatly improved service between Ottawa and Kingston, two trains daily each way, leaving Ottawa 9.35 a.m., via Carleton Place, Smiths Falls and Tichborne, reaching Kingston at 2.30 p.m.; also leaving Ottawa Central Station at 1.15 p.m. via Kempton, Smiths Falls and Tichborne, reaching Kingston at 8.45 p.m. From Kingston there will be a train leaving at 10.45 a.m. via Carleton Place, reaching Ottawa at 5.40 p.m. and another leaving Kingston at 5.40 p.m. via Kempton reaching Ottawa at 10 p.m. The Ottawa-Kingston trains in both directions will use the Ottawa Central Station.

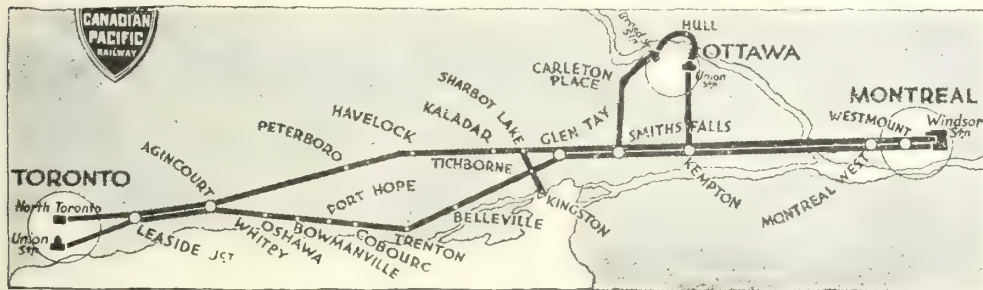

### Inverness Railway and Coal Company's Receivership.

The following circular was issued by the bondholders' committee—J.H. Plummer, President, Dominion Steel Corporation; Z. A. Lash, Senior Counsel, Canadian Northern Ry.; and D.B. Hanna, Third Vice President, Canadian Northern Ry., Oct. 7:—

A meeting of the bondholders of Inverness Railway & Coal Co. was held in accordance with the notice calling same, at the office of the company, Toronto, on June 30, at which W.E. Rundle, General Manager, National Trust Co., Ltd., occupied the chair. Substantially more than 5% of the bonds were represented at the meeting. Repre-

In the absence, therefore, of a definite plan by which the bondholders could now see their way to an ultimate solution of the company's financial problems, it was not considered advisable to authorize the creation of prior lien securities, or to pass any of the resolutions referred to in the notice convening the meeting, but in view of the disastrous effect the closing down of the mine would have on the company's properties, the trustees were instructed to apply in Nova Scotia for the appointment of a Receiver and Manager to continue operations till further order and a committee of bondholders was appointed to advise with the trustees respecting any matters which may arise in connection with the receivership and management, or with the duties of the trustees or the course of action which they should take. J. McGillivray, Inverness, N.S., was on July 6 appointed Receiver and Manager by the Nova Scotia court. It is anticipated that the operations of the company will meet expenses during the continuance of operations. The committee will issue further statements for the information of the bondholders as occasion may require.

**Alleged Claim Against the C.P.R.**—Controller Hebert asked the Montreal Board of Control, Oct. 5, to direct an enquiry to be made by the City Solicitor into the question of an alleged indebtedness of the C.P.R. to the city of \$600,000, under an agreement of 1893, and of \$25,000 for repairs on streets used by the railway. The first claim arises out of the taking over of the old Quebec, Montreal, Ottawa and Occidental Ry., and the erection of the Place Viger Station and Hotel. In 1901 a claim was made that the company had not lived up to its obligations, and the matter was apparently settled in 1903 by a report of a special committee covering a report of the then City Solicitor that the money could not be recovered. The company then claimed that it had done more than it was obliged to do under the agreement. No details are given respecting the \$25,000 claim. The matter is still under consideration.

Canadian Pacific Railway Routes between Toronto, Ottawa and Montreal.

Smiths Falls with train 35 from Montreal going via Peterboro and reaching Toronto Union Station at 6.25 p.m.

There will be two east bound morning trains for Montreal, one leaving Toronto Union Station at 8.50 a.m. daily except Sunday, via Peterboro, and the other leaving Toronto Union Station at 9.15 a.m. daily over the Lake Ontario shore line. The Ottawa passengers from these two trains will be carried on a train leaving Smiths Falls at 3.45 p.m. running via Carleton Place, reaching Broad St. Station, Ottawa, at 5.15 p.m. and Ottawa Central Station at 5.40 p.m.

At night the Ottawa-Toronto train no. 33, which now leaves Broad St. Station, Ottawa, will leave Ottawa Central Station daily at 11.10 p.m., reaching Kingston at 12.10 a.m. and there being consolidated with the Montreal-Toronto trains reaching Toronto Union Station via Peterboro at 7.20 a.m. and North Toronto at 8 a.m. and via the Lake Ontario shore line reaching Toronto Union Station at 7.35 a.m. The Toronto-Ottawa train no. 34, which now leaves Toronto Union Station at 11.10 p.m., will leave at 11 p.m. daily, running via Peterboro to Smiths Falls, where it will take on Ottawa sleeping cars from train 24 leaving North Toronto at 10 p.m. for Montreal via Peterboro, and will also take on Ottawa sleeping cars from train 22 which will leave Toronto Union Station for Montreal via the Lake Ontario shore line at 11.30 p.m. instead of 11.40 as at present. The consolidated train no. 34 from Smiths

representatives of the company addressed the meeting and pointed out that the company was and had been unable to meet its obligations in respect of its bonds for the following reasons:—There is insufficient market for coal of the quality produced; there is much slack in the coal produced, only a portion of which could be marketed at the time; high boat freights, resulting from war conditions, has restricted the present market for the company's output to Nova Scotia and New Brunswick or to local consumption.

The company has been investigating processes whereby its slack coal could be converted into saleable briquettes, but its efforts in that direction have so far been unsuccessful. A representative of the company was, at the outbreak of the war, making investigations in Austria, where the briquetting of coal is carried on successfully, but such investigations were necessarily terminated at the commencement of hostilities, and similar investigations in Great Britain, where experiments were being conducted in the same direction, had also to be abandoned for the same reasons. A survey and investigation of the coal deposits on the properties controlled by the company has been made, but such survey does not disclose coal of a higher quality than that which the company is at present mining, and until a solution of the difficulty of making saleable briquettes has been found, further expenditures in the development of other coal areas would not be warranted.

**National Transcontinental Ry. Shops for Munition Works.**—In speaking before the Canadian Manufacturers' Association's Montreal branch, Oct. 10., D.A. Thomas, representative in Canada of the British Minister of Munitions, said, among other things: "The Dominion Government had placed the National Transcontinental Ry. shops at the disposal of the Government for making shells at cost price. I take this opportunity of thanking the Canadian Government for the spirit shown in placing these shops at our disposal. We understand that some shells are already being made at the National Transcontinental shops at Transcona, Man., and that it is possible some will be made at the Intercolonial shops at Moncton. The National Transcontinental shops at Quebec are not yet completed."

**Toronto Terminals Ry. Co.**—Work is in progress on the site of the new union station in Toronto, gangs of men having started cleaning up Oct. 4. A statement that the work will be continued until completed is reported to have been made by J.R.M. Ambrose, Chief Engineer in charge of the work. The building is expected to be ready for the steel workers Mar. 1, 1916; to be ready for occupation in 1917, and to be finally completed in the following year. (Oct., pgs. 384 and 393).

**Railway Construction in South Africa.**—The South African Premier stated recently that since the formation of the Union Government there, 1,449 miles of railway had been built to July 31, 1915, and that by the end of the current year a further 950 miles would be completed.

## Grand Trunk Pacific Railway Company's Annual Meeting.

At the adjourned annual meeting in Montreal, Oct. 12, the President, E.J. Chamberlin, stated that as the railway was nearing completion construction work during the past year had been confined to necessary ballasting and bridges, principally on the Mountain Division, and no new extensions had been undertaken. In consequence of the adoption of fuel oil for locomotives between Prince Rupert and McBride, oil fuel plants had been completed at Jasper, McBride, Prince George, Endako, Smithers, Pacific and Prince Rupert, the last mentioned including plant for unloading from ships and loading cars for shipment inland. The oil dock at Prince Rupert and the bridge across the yard to the fuel oil tanks were also completed. The passenger train service between Edmonton and Prince Rupert was increased during the past season in consequence of the increasing travel, especially in connection with the exposition at San Francisco. In connection with the great development which is taking place in Alaska in consequence of the railway construction undertaken by the United States Government, the G.T.R. is rapidly becoming recognized as the route of quickest access to that section of the continent more or less remote from the eastern and central portions of the country, as it can be reached by the new railway within at least 48 hours less time than is required in travelling via any other route. This feature was also utilized immediately following the completion of the railway by the large fishery industries operating in North Pacific waters. Prince Rupert is the centre of very large fisheries which have scarcely begun to be developed because of the lack hitherto of adequate transportation facilities. These have been provided by the construction of the G.T.P.R., and tons of fish are being transported daily over the new line to the eastern markets of Chicago, Montreal, Boston, New York and Philadelphia. The future development of the industry promises a valuable and rapidly growing traffic for the railway. While the development in the portion of British Columbia through which the railway passes has not been as great as it otherwise would have been, consequent on the war and the financial situation, nevertheless development is going on through that section and a number of settlers have taken up land in the Nechako and Buckley valleys, and the outlook for mineral development is also very good. In Manitoba, Saskatchewan and Alberta, increased acreage of new land is being broken each year and put under crop, and this activity has continued during the past year along the G.T.P.R. and its branch lines. Large areas of new land are being plowed for next year's crop, and the present large crop will tax all of the railways in its transportation. The present year has been marked by the inauguration of the National train, which forms the first regular connection between the G.T.R. in the east and the G.T.P.R. in the west, and is operated via the Grand Trunk, the Temiskaming & Northern Ontario and the National Transcontinental Railways, and has proved very popular. There has also been completed the company's new floating dry dock at Prince Rupert, which has been under construction for several years for the accommodation of shipping in a part of the world hitherto remote from facilities of this character. The company's new hotel MacDonald at Edmonton was completed and opened for guests July 5.

The directors elected for the current year are: E.J. Chamberlin, President; W.H. Big-

gar, K.C., Vice President and General Counsel; J.E. Dalrymple, Vice President; Frank Scott, Vice President and Treasurer; W.H. Ardley, Comptroller; A.W. Smithers, Sir H. M. Jackson, Col. Firebrace, Geo. Von Chauvin, W.M. Macpherson, E.B. Greenshields, Hon. R. Dandurand, H.G. Kelley, H.R. Safford and J.R. Booth. Jules Hone is the Dominion Government representative on the Board. The other officers are: Morley Donaldson, Vice President and General Manager; H. Philips, Secretary.

The Grand Trunk Pacific Branch Lines Co. is a subsidiary company of the Grand Trunk Pacific Ry. Co., which was organized for the construction of branch lines in the Western provinces tributary to the G.T.P.R. main line. About 1,000 miles of branch lines have been built and the company has powers to build additional lines.

Its adjourned annual meeting was held at Montreal Oct. 13. The directors for the current year are: E.J. Chamberlin, President; M. Donaldson, Vice President and General Manager; W.H. Ardley, Vice President and Auditor; Frank Scott, Treasurer; W.H. Biggar, K.C.; H.G. Kelley. The Secretary is H. Philips.

## Canadian Northern Railway Construction, Betterments, Etc.

**Montreal Tunnel and Terminal Co.**—The work of excavating the tunnel under Mount Royal is reported to be practically completed. The city section, which extends from the McGill campus to the terminal site at Cathcart St., is said to have been the most difficult part of the work. At the back of the Mountain considerable progress has been made, and it is hoped to get some of the electric and other equipment installed during the winter. The power house building at the western portal is reported completed and ready for the installation of the machinery which is in course of delivery. The 80-ton electric locomotives which will be used for the operation of trains through the tunnel are reported to be ready for delivery.

**Canadian Northern Ontario Ry.**—The Hamilton Board of Health has ordered the C.N.O.R. to instal sanitary conveniences in the houses situated on the company's land in the city. The company has declined to do this and except in some cases has arranged for the wrecking of 28 of the houses. The conveniences ordered will be installed in the remaining houses. The land was acquired for railway construction purposes.

The Board of Railway Commissioners has declined to set aside either in whole or in part an agreement made with the municipality of North Bay, and has approved plans for the erection of a passenger and freight station there.

The section of the company's line between Rideau Jct., just outside Ottawa, and Port Arthur, Ont., has been opened for freight traffic, and will be opened for passenger traffic early in November.

A press report states that construction is being rushed on a short piece of track which will join up the C.N.R. track to the C.P.R. at the Port Arthur station and allow of a transfer of trains from the east without running them down to the yards. There is a considerable amount of rock work on the line.

**Canadian Northern Ry.**—Canadian Northern Pacific Ry.—The opening of the C.N.R. westerly from Edmonton to the Yellowhead Pass, and the extension, known as the C.N. Pacific Ry., to the Pacific Coast, is referred to further on. A list of stations with distances on the latter part of the line was given

in Canadian Railway and Marine World for October. The line west of Edmonton has been operated for some time as far as Onoway. Following is a list of the stations on the section of the line from Onoway to Yellowhead Pass in the order in which they are located going west:—Lake Isle, Evansburg, Chiplake, Dayson, Fulstow, Horner, Scriven, Dandurand, Marlboro, Berks, Everest, Obed, Dalehurst, Bliss, Entrance, Errington, Brule, Bedson, Snarling, Henry House, Maligne, Jasper, Mount Gelkio.

M.H. MacLeod, General Manager and Chief Engineer, arrived in Vancouver, Oct. 9, having made his first official trip of inspection over the line since its completion. The Provincial Minister of Railways, and other Provincial officers, started from Port Mann, and travelled over the line, meeting at Yellowhead Pass, Mr. MacLeod, and the Dominion Government inspecting engineer. The object of this trip was to pass the line for its opening for traffic.

**Vancouver Terminals.**—Tenders for the seawall construction at False Creek, the site of the Vancouver terminals, are under consideration by the engineering staff, and an announcement is expected at an early date as to the awarding of a contract. The specifications for this work are reported to include the following quantities: foundation excavation (wet) 450 cu. yd., concrete 4,950 cu. yd., reinforcing steel 305,000 lb., concrete piles 15,900 1. ft., creosoted fir piles 12,200 1. ft., asphalt 2,820 sq. yd., rock fill 15,500 cu. yd., square timber no. 1 common 19,500 f.b. m., iron in timber including U-bolts 5,500 lb., 255 spring coils.

Temporary freight sheds and other facilities will be installed at once in Vancouver on the reclaimed portion of the False Creek flats. These will be situated on the south side near the production of Front St., east of Main St. The connection from the end of steel of the C.N.P.R., at the south side of New Westminster bridge, with this shed will be over the Great Northern Ry. The freight shed plans call for a building 193 x 40 ft., and a passenger station 120 ft. x 30 ft.; the construction to be of wood. A spur line will be built to give connection with the Great Northern Ry. lines. (Oct., pg. 395.)

**Railway Payments on Queen St. Bridge, Toronto.**—The City of Toronto applied to the Board of Railway Commissioners, Oct. 13, in connection with arrears of payments by the railways concerned in the construction of the high level bridge carrying Queen St. East, Toronto, over railway tracks, which took place nearly five years ago. The city claimed to have paid the whole cost of construction, amounting to about \$720,000, and to have received \$100,000 from the C.P.R. and \$28,000 from the G.T.R., on account. The cost of construction was assessed as follows: C.P.R., 35%; G.T.R., 10%; Canadian Northern Ry., 25%; Toronto Ry., 15%, and the city, 15%. The Board ordered that the companies must pay a portion of the accounts forthwith.

**Railway Men and the War.**—It is shown by an official list published in England recently, that up to Aug. 31 the total number of men engaged on the railways in the United Kingdom, who have enlisted, was 92,658, or 14.9% of the total men engaged in railway work at the commencement of the war.

**The American Association of Travelling Passenger Agents** held its annual convention at Boston, Mass., Oct. 4 and 5. At the close of the convention several of the members, accompanied by their wives and daughters, visited several Canadian cities, including Quebec, Montreal, Ottawa and Toronto, where the party disbanded.

# Canadian Northern Passenger Service Between Sydenham and Harrowsmith.

J.W. Edwards, M.P., filed the following application with the Board of Railway Commissioners some little time since:—"In 1892 Loughboro Township passed a bylaw granting a bonus of \$5,000 to the Kingston, Napanee, and Western Ry. Co., which was to extend its line from Harrowsmith to Sydenham, Ont., a distance of three of four miles. The agreement between the township and the company required the company to run a train for passengers and freight from Sydenham to Harrowsmith in the forenoon and another in the afternoon, these trains to connect with trains going to and coming from Kingston. This was to be daily, Sundays excepted. It was further agreed that the company could only fail in carrying out this service, upon the repayment of the bonus to the township. Since this agreement, the road has been taken over and now forms a part of the Canadian Northern Ry. About the first of the year, the railway company took off the morning train, so that the people of Sydenham have no connection whatever with the trains running to Kingston. This is, of course, a very great inconvenience to that place, which is the largest village in the County of Frontenac."

The Chief Commissioner, Sir Henry L. Drayton gave judgment Sept. 30, Commissioner McLean concurring. After reciting the complaint the judgment says:—

The company in its reply submits that the bylaw the basis of the complaint reads as follows,—"The said company are to run a train for passengers and freight from said station (Sydenham) in the forenoon and one back to it in the afternoon, making connection with the trains at Harrowsmith every day in the week except Sunday."

The company further states that the bylaw had been complied with, as train 7 left Sydenham at 1.59 a.m. and arrived at Harrowsmith at 2.09 a.m.; and that a train left Kingston at 2.45 p.m. arriving at Harrowsmith Jct. at 3.40 p.m. connecting with train arriving at Sydenham at 3.50 p.m. The company's answer proceeds,—

"There is no doubt that at the time the bylaw referred to was passed, the people in Sydenham did not contemplate being on an important trunk line between Ottawa, Toronto, and Montreal, and Sydenham being now on the main line of our railway between these points is, we think, of very much greater advantage to the community than the local service at Harrowsmith, the distance between Harrowsmith and Sydenham being 4.3 miles. Sydenham now gets the benefit of all through trains, and when business improves and the line opens through to Montreal we expect to have a local service between Ottawa and Kingston, in addition to the present main line service. Sydenham now being on the main line has a day and night service east to Ottawa and west to Toronto and intermediate points, and while the morning connection to Kingston is at an awkward hour and involves a wait at Harrowsmith Jct., we still feel that it is a technical compliance with the bylaw and that the only question that should be decided is whether Sydenham gets a reasonable service from the railway at present."

Sydenham lies about four miles east of Harrowsmith, and the Inspector reports that there is a good stage service between Harrowsmith and Sydenham by which connection can be made for Kingston. The discontinuance of train 71, of course, gives rise to the complaint. It was a local from Deseronto to Sydenham and return. The receipts at Sydenham station have been gone into by the Board, with a view to ascertaining whether or not, under the general provisions of the Act, the Board could order the service to be re-instated. Taking the six months period commencing on Oct. 1, 1914, and ending March, 1915, it was found that the total passenger earnings were \$130.00; the total freight earnings \$650.61; and the

total express earnings \$31.30; resulting in gross earnings of about \$811.91 for the period. The Inspector, dealing with the question of course as entirely a matter of reasonable service for traffic offered, proceeds in his report as follows,—

"After going carefully into this matter with the agent and making full inquiries, there would seem to be little or no room for complaint, as Sydenham is on the main line of the C.N.R. between Toronto and Ottawa, and all trains stop at this station. The service between Sydenham and Kingston is not so good as it might be, but there is an up to date stage coach or motor, which runs between Sydenham and Harrowsmith and makes the connections for Kingston. The handling of freight at Sydenham is the same as it always was, and it would be unfair to the railway company to ask it to put on a train, or run train 71 through from Yarker to Sydenham, a distance of about 10.6 miles, which could not be done except at a great loss to the company. It would cost at least \$20 or \$25 a day to do this, and you will note by the earnings for the three months when the train was on, that it was a losing proposition. The fact that Sydenham is now located on the C.N.R. main line between Toronto and Ottawa, and gets the benefit of all the through service, should form some compensation for the slight inconvenience of the poor connections to Kingston. I have no doubt that when business increases, the proper service will be put on and better connections made for Kingston; but, under the present strenuous conditions, it would be unfair to ask the company to run train 71 to Sydenham."

The company also filed a statement showing freight and passenger business between Sydenham and Kingston which covers the period from June 1, 1910, to June 5, 1911. At this time Sydenham had no service on the main line, and the railway was not operated by the Canadian Northern. The return shows that 1007 passenger tickets were issued at a gross return of \$798.90, and 481,764 lbs. of freight handled at a gross return of \$270.38. Under such circumstances, it is clear that no order can be made directing the company to maintain the service, which, in view of the total earnings shown, was entirely unremunerative, resulting in losses to the company which could only be made up from earnings supplied by other localities. Adequate service under the provisions of the Railway Act is a service which it is the duty of the Board to see furnished; and, so far as service is concerned, under the circumstances of this case, no order can be made.

The right of the municipality under its bonus bylaw stands, however, on a different basis. A hearing by the Board was had in Toronto, at which the company was called on to show cause why the bylaw should not be carried out. The clauses of the bylaw applicable are,—

"The said company are to run a train for passengers and freight from said station (Sydenham) in the forenoon and one back to it in the afternoon, making connection with trains at Harrowsmith every day in the week except Sunday."

"Should the said company at any time hereafter fail to maintain said road and station or run said trains they can only do so upon repayment of the bonus of \$5,000 to said municipality."

The company is maintaining the station. It is giving Sydenham, owing to the fact that it is now on the main line of the Canadian Northern, greater railway accommodation than that called for by the bylaw, in that the company runs two eastbound trains and two westbound trains between Toronto and Ottawa daily, all stopping at Sydenham and at Harrowsmith,—the westbound trains leaving Sydenham at 1.59 a.m. and 3.10 p.m., and the eastbound trains arriving at Sydenham at 4.18 a.m. and 4.10 p.m. Before the installation of the Canadian Northern service, through east and west traffic, either from or to Sydenham, was carried by the Kingston, Napanee & Western by way of

Harrowsmith to Kingston. So far as this service is concerned, there is no doubt that it is much better looked after so far as Sydenham is concerned under the present train service, carried as it is east and west direct, than by what was formerly practically a transfer to Kingston. While no doubt the east and west traffic is something which Sydenham was interested in and probably one of the reasons why the township agreed to give the bonus of \$5,000 to the construction of the line, undoubtedly, however, the local service between Sydenham and Kingston was a matter of moment; and it is a service, between Kingston and Sydenham, which is without any reservation covered by the bylaw. The company does not dispute that its predecessors pledged themselves to observe the terms of the bylaw. There is no doubt that the \$5,000 was accepted, and accepted subject to those terms. Under it, the company has to run a train in the forenoon and one back in the afternoon connecting with the trains at Harrowsmith. This connection at Harrowsmith is a Kingston connection. The only morning train from Sydenham to Harrowsmith is the 1.59 a.m. train, arriving at Harrowsmith at 2.09 a.m.; and the morning train from Harrowsmith to Kingston on the C. N. R. leaves Harrowsmith at 9.15 a.m., entailing a wait of seven hours at Harrowsmith. At Harrowsmith both railways run into the same station, and trains on the Canadian Pacific can conveniently be taken from Harrowsmith to Kingston. The first train from Harrowsmith on the C.P.R. leaves at 6.55 a.m., making a wait of four hours.

Apart from any question of connections, however, I am of the opinion that an obligation to supply a train in the forenoon is not met by supplying one 1 hour and 59 minutes after midnight. The bylaw, accepted by the company's predecessors as it was, is one, which as I construe it, was intended to provide, and did provide, for a service which could be used by the people of Sydenham, a service which would enable them to leave Sydenham in the morning and not at night, and return in the afternoon. There is no difficulty about the afternoon train, as one leaves Harrowsmith at 3.55. I am of the opinion, therefore, that the company has not provided the morning service, which, under the bylaw, it is obliged to do; and that, again under the bylaw, unless this service is given, the bonus of \$5,000 has to be repaid. I have no doubt that the people at Sydenham would sooner that a proper morning service to Harrowsmith with proper connection to Kingston would be given than that the township should recover this \$5,000. In view of the earnings, however, as already pointed out, the Board cannot order that to be done. The company, however, will be given the option of restoring the service within one month, and thereafter maintaining it, or of repaying the \$5,000 bonus. No order will, therefore, issue, until Nov. 1, when, in the absence of the restoration of the service, an order will go directing repayment of the \$5,000 by the Canadian Northern to the municipality.

The Brule Lake Coal Co. has been incorporated under the Dominion Companies Act, with a capital of \$200,000 and office in Toronto, to carry on a coal mining business, and in connection therewith to construct tramways, and to operate steam and other vessels. The provisional directors are G. Ruel, R.H.M. Temple, A.J. Reid, G.N. Limpicht, F.C. Allen, Toronto.

### Railway Finance, Meetings, Etc.

**Canadian Northern Ry.**—There has been a meeting with the Secretary of State at Ottawa, in connection with a collateral trust agreement between the C.N.R. and the Columbia Trust Co., dated Sept. 1, securing the company's two year 5% collateral trust gold bonds.

**Grand Trunk Ry.**—A dividend of 11-2% has been declared for the half year ended June 30, on the 1% guaranteed non-cumulative stock. This is the same amount as declared for the previous half year.

**Lake Superior Corporation.**—The following constitute the board for the current year, as elected at the recent annual meetings,—W.K. Williams, Chairman; W.E. Stavert, President; H. Copell, Vice President; A. Taylor, Secretary; Jas. Hawson, Treasurer; F. McOwen, J.T. Terry, J.S. Dale, H.I. Underhill, W.C. Franz, A.H. Chitty and T. Gibson.

**Ottawa and New York Ry.**—The following are the directors for the current year,—A.H.

Frank Scott, Secretary and Treasurer; J.E. R.R. Logan.

**Pere Marquette Rd.**—P.H. King, Operating Receiver, announced Oct. 19, that a dividend of 10% would be paid on Dec. 1 to all creditors holding open accounts for materials and supplies. \$70,000 a month is being paid on defaulted equipment notes. It is expected to clear off these notes in another twelve months.

**Pere Marquette Rd.**—A decree of foreclosure and an order for the sale of the property were filed in the U.S. Courts, Oct. 5. The order directs that no bid of less than \$14,000,000 shall be received. All the cases against the P.M.R. are to be consolidated and the date for the sale of the property is to be fixed by the Master of the Court.

**Temiscouata Ry.**—Net earnings for July, \$3,801, against \$6,208 for July, 1914.

**Temiscouata Ry.**—The directors elected at the recent annual meeting are:—J.H. Walsh, President; E.O. Grundy, Vice President; A.

### Information About A. F. Dillinger Wanted.

The Forester, the Independent Order of Foresters' official organ, published in Toronto, had in its last issue a portrait of A.F. Dillinger, respecting whom it said:—"Brother A. Frank Dillinger, a member of Court Ottawa, no. 41, has been absent from home over a year. His wife and aged mother, and the members of Court Ottawa are extremely anxious to hear from him. The brother is 45 years old, 6 ft. high, weighs about 155 lbs., of slender build, walks erect, dark complexion, dark hair mixed with gray, brown eyes, prominent features, wears no. 8 glove and a no. 8 shoe, a scar across nose and forehead, dimple in chin. In addition to being a Forester, he is a Mason and Knight of the Golden Eagle. He will probably be employed as operator or train despatcher. Please address the Editor."

The A.F. Dillinger referred to was in the Canadian Pacific service, in various capaci-

The Canadian Pacific Railway's new Union Station at Quebec.

A complete description of this station was published in Canadian Railway and Marine World for September and a ground plan showing the location was published in the October issue.

Smith, President; W.K. Vanderbilt Jr., Vice President; F.W. Vanderbilt, W. Rockefeller, W.L. Scott, G.D. Kelley, J.S. Ewart, W.P. Torrance and D.W. Saunders. The other officers are,—John Carstensen, I.W. Place and C.F. Daly, Vice Presidents; D.W. Pardee, Secretary; E.F. Stephenson, Assistant Secretary; E.L. Rossiter, Treasurer; L. Bender and G.W. Porter, Assistant Treasurers.

**Ottawa and New York Ry.**—St. Lawrence and Adirondack Ry.—Application is being made by the Ottawa and New York Ry., and the St. Lawrence and Adirondack Ry., to the Board of Railway Commissioners for a recommendation to the Governor-in-Council for the sanction of leases of their lines and properties to the New York Central Rd., upon the terms and conditions named therein. The Dominion Parliament last session authorized the two companies named to lease their lines to the N.Y.C.R., for 21 years.

**Ottawa Terminals Ry.**—The directors for the current year are:—E.J. Chamberlin, President; H.G. Kelley, Vice President;

H. Cook, A. Laurie, Fergus Murphy, W.N. Campbell, T.J. Maguire. The Secretary and Manager is C.A. Stewart.

**Toronto Terminals Ry.**—There was filed with the Secretary of State at Ottawa, Oct. 5, a mortgage deed dated May 31, between the Toronto Terminals Ry., the Grand Trunk Ry., and the Canadian Pacific Ry., in which the latter two companies are indemnified as mortgagees upon the terms recited therein.

**White Pass and Yukon Route.**—Gross earnings from Jan. 1 to Sept. 21, \$1,283,477 against \$1,340,865 for same period, 1914.

**Prince Rupert's Fishing Industry.**—John Pullen, President, Canadian Express Co., who has returned to Montreal recently from a trip to the Pacific Coast, says the fishing industry at Prince Rupert has assumed considerable importance. The average monthly receipts of fish there are 1,723,000 lbs., mostly halibut, and 73 vessels touched at the port in 30 days. The business has increased so much that the company will have to add more refrigerator equipment.

ties some years ago, being stationed at Regina, Sask.; Brandon, Man.; Fort William, Ont.; and Kitchener, B.C. About 1898 he was appointed operating Assistant to the Chief Traffic Officer, Board of Railway Commissioners, at Ottawa, but resigned in 1911. In August of that year he was reported to have been arrested at Kansas City, Mo., with a Mrs. Rose Morgan, in whose company he was said to have been. Mrs. Dillinger, who had gone to Kansas City from Ottawa, was present when the arrests were made.

**Free Transportation for Threshing Machines.**—The Canadian Northern and the Grand Trunk Pacific Railways are reported to have issued orders, Oct. 5, under which second hand threshing machines may be shipped to any point in Manitoba, Saskatchewan or Alberta up to Dec. 31, full freight rates being charged, but upon presentation of the original bill of lading and the return of the outfit to the starting point by Mar. 1, 1916, no charge will be made for the return journey.

## The Canadian Pacific Railway's Roll of Honor.

Following the lists of C.P.R. officers and employes killed or wounded in action in Europe, which were issued by C.H. Buell, Staff Registrar and Secretary, Pension Department, on Aug. 3 and 25, two more lists, nos. 2 and 3, were issued, Oct. 4, as below, prefaced by the following remarks: "Several thousand officers and employes of this company enlisted for active military duty with the Canadian Expeditionary Forces, and the majority of them are now in Europe, bravely battling for Canada and the Empire. As particulars of army reservists are not available, these lists of those who have given up their lives for their country, or been wounded in action, are necessarily incomplete, and do not therefore indicate fully the extent to which the company's officers and employes have participated in the great struggle."

### List 3.

Austin, Kenneth G., yardman, Fort William, wounded.  
Bachelder, Dell A., yardman, Lethbridge, wounded.  
Bedford, Percy, waiter, Montreal, wounded.  
Blades, Ernest R., clerk, Winnipeg, wounded.  
Button, Alex. M., trainman, Kenora, wounded.  
Cockle, Robert S., sectionman, La Riviere, wounded.  
Cope, William, clerk, Windsor, killed in action.  
Crouch, J., porter, Port McNicoll, died of wounds.  
Daniel, Wm.T., resident engineer, Regina, gas poisoning.  
Day, Harry, waiter, Montreal, wounded.  
Dickinson, Chas.E., apprentice, Winnipeg, wounded.  
Dumais, J.B., fireman, Fort William, killed in action.  
Fletcher, Charles, waiter, Victoria, wounded.  
Gillespie, H.S.B., trainman, Atlantic Division, wounded.  
Godley, John, second cook, Montreal, wounded.  
Goodrich, F.E., locomotive man, West Toronto, wounded.  
Gregory, Richard A., checker, Calgary, wounded.  
Hatcher, Chas.F., fireman, Calgary, suffering from shock.  
Hay, Adam C., clerk, Winnipeg, wounded.  
Hesketh, James A., assistant engineer, Winnipeg, wounded.  
Hogg, James E., fireman, Calgary, wounded.  
Hughes, Wm., machinist, Angus, killed in action.  
Hustwayte, Harry, carpenter, Winnipeg, wounded.  
Johnson, Geo.A., laborer, Revelstoke, wounded.  
Linnington, Alf.W., constable, Toronto, killed in action.  
McCarthy, Herbert, laborer, Arcola, suffering from shock.  
McIlroy, John, clerk, Calgary, wounded.  
Miller, Thos., clerk, Field, wounded.  
Muncaster, Art.J., yardman, Outremont, wounded.  
Spurgeon, Chris., constable, Winnipeg, wounded.  
Storrier, Melville, constable, Montreal, wounded.  
Thrasher, John M., fireman, Kenora, wounded.  
Toyne, Joseph, wiper, East Calgary, wounded.  
Ware, Alfred James, constable, Montreal, wounded.

Young, S.E.B., fitter, Angus, wounded.

### List 4.

Ballock, John, frt. handler, Fort William, killed in action.  
Batchelor, Thos.E., constable, Winnipeg, wounded.  
Biggam, Andrew, clerk, Moose Jaw, wounded.  
Boothby, Geo.W., clerk, Montreal, wounded.  
Bratt, S.W., silver cleaner, Quebec, wounded.  
Burns, Edward, specialist, Angus, wounded.  
Burrells, F.H., bell boy, Winnipeg, wounded.  
Crosby, Geo.C., fireman, Alyth, wounded.  
De LaCour, E., houseman, Winnipeg, wounded.  
Dixon, Julian, fireman, Calgary, killed in action.  
Duncan, David, helper, Glen Yard, killed in action.  
Evans, Edwin, helper, Angus, wounded.  
Farnworth, Percy, brass filer, Angus, wounded.  
Fisher, Harry R., fireman, Eastern Division, died of wounds.  
Gray, Wm.E., conductor, Brandon, wounded.  
Hall, Harry C., clerk, Winnipeg, wounded.  
Haynes, Thos.R., clerk, Cranbrook, wounded.  
Halloway, Wm., wiper, Brandon, wounded.  
Holmes, Jas.S., wiper, Medicine Hat, wounded and missing.  
Howlett, H.B., checker, Fort William, wounded and missing.

Hyslop, Jas., car repairer, Hochelaga, gas poisoning.  
Knox, Harvey, wiper, Moose Jaw, wounded.  
Lavender, James, checker, Fort William, wounded.  
Lewis, Arnold, second cook, Montreal, wounded.  
MacAuley, Murdo, fireman, Cranbrook, wounded.  
McKay, Charles, checker, Fort William, killed.  
Maxwell, A.W., clerk, Winnipeg, suffering from shock.  
Morrow, Robt.F., locomotive man, Winnipeg, died of wounds.  
Mason, Wm.J., stower, Fort William, wounded.  
Naylor, Herb.V., clerk, Winnipeg, killed.  
Oke, Richard G., brakeman, Souris, wounded.  
Pratt, Clifford, clerk, Montreal, wounded.  
Rafferty, Thos.P., brakeman, Cranbrook, wounded.  
Robinson, Alfred, linen handler, Montreal, wounded.  
Sellick, Wm., pipe fitter, Hochelaga, wounded.  
Shaw, Wm., stat'y. engine man, Vancouver, died of wounds.  
Shiers, Frank, bridgeman, Moose Jaw, wounded.  
Taylor, C.S., clerk, Montreal, wounded and prisoner.  
Walker, Wm.G., clerk, Montreal, wounded.  
Wheelhouse, C., wiper, Assiniboia, killed in action.  
Williams, A.G., fireman, Medicine Hat, wounded.  
Wiman, E.L., fireman, Smith's Falls, died of wounds.

# Mainly About Railway People Throughout Canada.

**A.W.Smithers**, Chairman of the Board, G.T.R. and G.T.Pacific Ry., arrived in Montreal Oct. 21, for his annual inspection of the system.

**H.C.Groat**, General Superintendent, Atlantic Division, C.P.R., St. John, N.B., has been granted leave of absence and has gone to California.

**A.O.Norton** and **Harry A.Norton**, of Coaticook, Que., have each contributed a machine gun to the 5th Canadian Mounted Rifles.

**Capt.C.H.Crowdy**, of the 13th Royal Highlanders, Montreal, son of G.J.Crowdy, of Jas.Hutton & Co., was killed in action in France, Oct. 21.

**Sir Sandford Fleming, K.C.M.G.**, director, C.P.R., who died recently, left an estate valued at \$238,534, most of which had been distributed prior to his death.

**J.G.Sullivan**, M.Can.Soc.C.E., Chief Engineer, C.P.R., Winnipeg, represented Canada at the Congress of Engineers at San Francisco, Cal., recently.

**F.W.Peters**, General Superintendent, British Columbia Division, C.P.R., Vancouver, spent a short holiday in October, hunting in Alberta.

**Sir Thomas Skinner**, who is a director of the C.P.R., has resigned from the Hudson's Bay Co. committee, and has been succeeded by his son, T. Hewitt Skinner.

**M.P.Davis**, of M.P. and J.T.Davis, railway contractors, Ottawa and Quebec, has given \$1,000 to the fund being raised for the benefit of returned wounded soldiers.

**A.Copony**, Master Car Builder, G.T.R., Chicago, Ill., has been elected a member of the Master Car Builders' Association standing committee on specifications and tests for materials.

**Hon.Samuel Barker, M.P.**, who died at Hamilton, Ont., recently and was at one time General Manager, Northern Ry. of Canada, left \$210,847 to his widow, four daughters and son.

**G.C.Martin**, General Freight and Passenger Agent, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., attended the national convention of safety first committees at Philadelphia, Pa., Oct. 20.

**Lieut.William Wallace**, who has joined the 58th Battalion, at Brantford, Ont., recently for overseas service, was formerly one of the engineers on the construction of the Lake Erie and Northern Ry.

**C.R.Hosmer**, one of the C.P.R. directors, is stated in a press report to be the second largest private holder of Canadian bank stocks. It is said that his yearly income from that source alone is \$36,300.

**Capt.L.H.Curry**, 42nd Highlanders, formerly Assistant to the Vice President, Canadian Steel Foundries Ltd., Montreal, and third son of Hon.N.Curry, was reported, Oct. 21, to have been killed in action.

**G.McLaren Brown**, European Manager, C.P.R., London, Eng., is one of the first directors of the Institute of Industry of Great Britain and Ireland Ltd., which has been registered in London recently.

**Jas. Coleman**, Superintendent Car Department, G.T.R., Montreal, has been elected a member of the Master Car Builders' Association standing committees on arbitration and specifications and tests for materials.

**E.Moore**, chief clerk to I.G.Ogden, Vice President, Finance and Accounting Department, C.P.R., Montreal, was presented with a case of silver and a purse of money, by

his associates, Oct. 15, on the occasion of his recent marriage.

**W.W.Kibbie**, formerly town ticket and telegraph agent, C.P.R., Carleton Place, Ont., died there, Oct. 10, aged 56, from paralysis. He occupied the position for about 30 years, and retired in July on account of ill health.

**J.E.Quick**, General Baggage Agent, G.T.R. and G.T.Pacific Ry., Toronto, was re-elected, for the 31st consecutive year, Secretary of the American Association of General Baggage Agents, at its annual convention at Kansas City, Mo., Oct. 13 and 14.

**L.W.Mitchell**, Treasurer, Canadian Northern Ry.; Purchasing Agent, Eastern Lines, Canadian Northern Ry.; and Purchasing Agent, Mackenzie, Mann & Co. Ltd., has

**H. Hulatt.**  
Manager of Telegraphs, Grand Trunk Railway and Grand Trunk Pacific Railway.

been elected by acclamation as a town councillor of Leaside, a Toronto suburb.

**W.M.Kirkpatrick**, Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Montreal, whose leave of absence for active service was mentioned in our last issue, has been appointed Captain in the Canadian Grenadier Guards, 87th Overseas Battalion.

**Capt.H.Wellwood**, of the Canada Overseas Railway Construction Corps, whose home is at Kingston, Ont., and Sergeant-Major Wood, of St. John, N.B., have, according to a press dispatch, arrived in Montreal from England, to get drafts of men for the corps.

**J.S.Dennis**, Assistant to the President, C.P.R., who is in charge of the Department of Natural Resources at Calgary, Alta., has been elected First Vice President of the International Irrigation Congress, which held its 22nd annual session recently at Stockton, Sacramento and San Francisco, Cal.

Daily press reports stated recently that **Sir Henry Drayton**, Chief Railway Commissioner, and **D'Arcy Scott**, Assistant Chief

Railway Commissioner, would visit England shortly to discuss with officials there a number of transportation matters. We are officially advised that the press report was incorrect. **D'Arcy Scott** recently returned from England, where his two sons are at school.

**Frederic Nicholls**, director Canadian Northern Ry., and Toronto Ry., and President Canadian General Electric Co., has been appointed acting President of the Dominion Iron & Steel Co., in consequence of the illness of the President, **J.H.Plummer**. The board vacancy caused by Sir William Van Horne's death has not yet been filled.

**W.B.Mackenzie**, formerly Chief Engineer and afterwards Right of Way and Lease Agent, Canadian Government Railways, Moncton, N.B., has received information that his son, **Capt.B.H.Mackenzie**, who is on active service in Europe with the 24th Battalion, was officially reported wounded in action, Oct. 14.

**Geo. Chahoon, Jr.**, heretofore Vice President and Manager, Laurentide Co., Ltd., having been elected President to succeed the late Sir William Van Horne, **C.R.Hosmer**, one of the Canadian Pacific Ry.'s directors, has been elected Vice President, and **J.K.L.Ross**, another C.P.R. director, has been elected a director to fill the vacancy caused by Sir William Van Horne's death.

**W.J.Rooney**, who has been appointed Division Superintendent of Telegraphs, Alberta and British Columbia Lines, G.T.Pacific Ry., Edmonton, Alta., was, from 1896 to 1902, in Toronto Electric Light Co.'s service; 1902 to 1905, in construction department, Great North Western Telegraph Co.; 1905 to Jan. 1913, General Foreman of Telegraph Construction, G.T.Pacific Ry.; Jan. 1913 to Oct. 25, 1915, Superintendent of Telegraph Plant, G.T.Pacific Ry., Winnipeg.

**Rowland F.Hill**, who has been appointed Assistant General Freight and Passenger Agent, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., was born there, Dec. 14, 1889, and entered T.H.& B.R. service in July, 1906, since when he has been, to Sept. 1906 to Sept. 1909, stenographer, General Freight and Passenger Agent's office; Sept. 1909 to Nov. 1911, Soliciting Freight Agent, Hamilton; Nov. 1911 to May 1915, rate clerk; May to Sept. 1915, chief clerk to General Freight and Passenger Agent and General Traffic Manager.

**W.R.Fitzmaurice**, who has been appointed acting Superintendent, District 2, Intercolonial Ry., Campbellton, N.B., in consequence of Evan Price's death, was born at Bedford, N.S., Mar. 19, 1870, and entered I.R.C. service May 21, 1886, since when he has been, to 1889, operator at various stations in Nova Scotia; 1889 to 1897, assistant agent, Springhill Jct., N.S.; 1897 to 1898, agent, Oxford Jct., N.S.; 1898 to Aug. 12, 1913, agent, Amherst, N.S.; Aug. 12, 1913, to Sept. 28, 1915, Assistant Superintendent, Moncton-Ste.Flavie District, Newcastle, N.B.

**H.LeJeune**, formerly of the C.P.R. Hotel Department, who was stricken with paralysis at Winnipeg, Sept. 9, as mentioned in Canadian Railway and Marine World for October, was removed, Oct. 19, from the Royal Alexandra Hotel, where he had lived for some years, to the St. Boniface Hospital. His right side is completely paralysed, and though conscious and recognising people, he was at that date unable to speak. It is hoped that it will be possible to remove him to the east early in November.

**Lieut. Herrick S. Duggan**, B.Sc., McGill University, Jr. Can.Soc. C.E., who was in the Royal Engineers, Imperial Army, and whose death is announced, was the son of G. Herrick Duggan, M.Can.Soc. C.E., First Vice-President, Dominion Bridge Co., Montreal. When war broke out he was in the Dominion Bridge Co.'s service in Toronto, and went to England to obtain business for the company. While there he obtained a commission in the Royal Engineers. In writing late in September he said he was chiefly engaged in laying and repairing telegraph and telephone communications.

**Edward Hall Drew**, who has been appointed Inspector Sleeping, Dining and Parlor Car and News Department, Western Lines, Canadian Northern Ry., Winnipeg, was born at Newark, N.J., Aug. 12, 1878, and entered transportation service in 1902, since when he has been, to 1906, sleeping car conductor, Pullman Co., New York City; 1906 to 1907, General Yard Foreman, Pullman Co., Chicago, Ill.; 1907 to 1908, Inspector and Second Assistant Superintendent, Pullman Co., Chicago, Ill.; 1908 to 1914, Assistant Superintendent, Pullman Co., Chicago, Ill.; 1914 to Sept. 1915, dining car conductor, G.T. Pacific Ry., Winnipeg.

**John Harold Valteau**, whose appointment as Secretary-Treasurer, Thousand Islands Ry., and Oshawa Ry., Gananoque, Ont., was announced in our last issue, was born at Selby, Ont., Oct. 14, 1889, and was educated at Deseronto, Ont. He commenced service with the Rathbun Co., Oct. 1904, and acted as messenger and clerk until Apr. 1906. From Apr. 1906 to Aug. 1910, he was clerk in the Audit Department, Bay of Quinte Ry., Thousand Islands Ry. and Oshawa Ry., Deseronto, Ont.; Aug. 1910 to July 1912, Travelling Auditor and Assistant to Auditor, same roads; July to Oct., 1912, Accountant, Thousand Islands Ry. and Oshawa Ry., Deseronto, Ont.; Oct. 1912 to Sept. 1915, Accountant, same roads, Gananoque, Ont.

**Percy Giffkins**, who has resigned the General Managership of the Dominion Atlantic Ry., as referred to under "Transportation Appointments Throughout Canada" on another page of this issue, was born at Harpenden, England, Dec. 25, 1850, entered railway service in 1871 as audit clerk and was subsequently paymaster, Windsor & Annapolis Ry., now the Dominion Atlantic Ry., since which he has been consecutively 1872 to 1875, station master, same road, at Annapolis and Halifax; 1875 to 1889, Auditor; 1889 to 1893, Auditor and General Passenger Agent; 1893 to Jan. 1896, General Passenger Agent; Jan. 1896 to July 1897, Traffic Superintendent; July 1897 to May 1, 1911, Superintendent; May 1, 1900 to Oct. 31, 1915, General Manager, same road.

**Capt. T. C. Irving, Jr.**, A.M. Can. Soc. C.E., of Toronto, Vice President, Robert W. Hunt & Co. Ltd., bureau of inspection, tests and consultation, who went overseas with the first Canadian Expeditionary Forces, has been appointed temporary Major. He left Toronto in command of the 2nd field company, Canadian Engineers, and continued in that position at Valcartier, but in the readjustment of officers Major Lindsay was appointed to the command, with Capt. Irving second in command. About a week before the first contingent left Salisbury for France, Major Lindsay was thrown from a horse and had to stay behind in England, Capt. Irving again assuming command until the middle of May, when Major Lindsay rejoined in France. Since Major Lindsay's promotion to Colonel in command of the 1st division, Capt. Irving has again been in command of the 2nd company.

**C. T. Delamere**, who has been appointed acting Engineer Maintenance of Way, Eastern Lines, C.P.R., Montreal, was born at

Brainerd, Minn., Mar. 18, 1881, and graduated in civil engineering from Minnesota University in 1903. He entered railway service in 1903, since when he has been, to 1904, transit man, Northern Pacific Ry.; 1904 to 1905, Resident Engineer, same road; 1905 to 1908, Division Engineer, same road; 1908 to 1909, Locating Engineer, Western Dakota Ry.; 1909 to 1911, Division Engineer, same road; 1911 to July, 1912, Resident Engineer and Division Engineer, Canadian Northern Ontario Ry.; July, 1912, to Sept., 1913, Assistant District Engineer, C.N. Ontario Ry., Port Arthur; Sept., 1913, to Feb., 1915, Assistant Engineer of Construction, Eastern Lines, C.P.R., Montreal; Feb., 1915, to date, acting Engineer of Construction, Eastern Lines, C.P.R., Montreal. He also continues in the latter position.

**H. J. White**, whose appointment as Supervisor of Car Work, Eastern Lines, Canadian Northern Ry., Toronto, was announced in a previous issue, was born at Brownington, Vt., Apr. 1, 1871, and entered railway service

P456  
J. H. Valteau,  
Secretary-Treasurer, Oshawa Railway and  
Thousand Islands Railway.

in May 1893, since when he has been, to Sept. 1894, car repairer and joint car inspector, C.P.R. and Boston and Maine Rd., Newport, Vt.; Sept. 1894 to May 1900, joint Car Inspector, C.P.R. and Canada Atlantic Ry., St. Polycarpe Jct., Que.; May 1900 to Feb. 1903, Car Inspector, C.P.R., Toronto; Feb. 1903 to Sept. 1906, leading hand carpenter, C.P.R., Outremont, Que.; Sept. 1906 to May 1911, Car Foreman and Wrecking Foreman, C.P.R., North Bay, Ont.; May 1911 to Nov. 1913, Car Foreman and Wrecking Foreman, C.P.R., West Toronto, Ont.; Nov. 1913 to Aug. 10, 1915, General Foreman Car Department, Quebec Grand Division, Canadian Northern Ry., Joliette, Que.

**Evan Price**, Superintendent, Moncton and Mont Joli District, Intercolonial Ry., Campbellton, N.B., who died there Sept. 27, after having been ill for some time, was a son of the late William Price, a Montreal contractor, and was born at New York, Nov. 19, 1852. He entered the I.R.C. service April 3, 1876, as train dispatcher. On Oct. 1, 1881, he was appointed Chief Train Dispatcher and on Aug. 15, 1902, Superintendent, the

whole of his service being performed at Campbelltown. He leaves a widow, a son and a married daughter. Frederick Price, Superintendent, Car Service, Grand Trunk Ry., Montreal, is one of his brothers. The late H. A. Price, who at the time of his death was District Passenger Agent, Canadian Government Railways, Montreal, was another brother. The funeral at Campbelltown was attended by J. K. McNeillie, General Superintendent, Canadian Government Railways, and some other general officers and a number of I.R.C. officials.

**Albert H. Eager**, whose appointment as Assistant Superintendent of Rolling Stock, Canadian Northern Ry., Winnipeg, was announced in our last issue, was born at Waterloo, Que., July 15, 1868, and entered railway service June 1, 1885, since when he has been, to June 1, 1893, apprentice machinist, South Eastern Ry. and C.P.R., Farnham, Que.; June 1, 1893, to Aug. 10, 1899, machinist, C.P.R., Farnham, Que.; Aug. 10, 1899, to Nov. 1, 1901, Locomotive House Foreman, C.P.R., Farnham, Que.; Nov. 1, 1901, to Mar. 1, 1903, Locomotive Foreman, C.P.R., Megantic, Que.; Mar. 1, 1903, to May 1, 1906, Locomotive Foreman, C.P.R., Cranbrook, B.C.; May 1, 1906, to June 1, 1907, General Foreman, C.P.R., Calgary, Alta.; June 1, 1907, to Nov. 1, 1908, District Master Mechanic, C.P.R., Kenora, Ont.; Nov. 1, 1908, to May 1, 1910, Locomotive Foreman, C.P.R., Calgary, Alta.; May 1, 1910, to Aug. 1, 1915, Superintendent of Shops, Canadian Northern Ry., Winnipeg.

**A. B. Smith**, heretofore Manager, Grand Trunk and Grand Trunk Pacific Railway's Telegraphs, who has resigned on account of ill health, was born in Montreal. As a youth in 1862 he entered the Montreal Telegraph Co.'s service at Montreal. In Aug. 1869 he was appointed chief operator at Hamilton, Ont., and in 1872 was appointed General Inspector. In 1889 he was appointed Superintendent of Construction, Great North Western Telegraph Co., which had in 1881 taken over the maintenance and operation of the Montreal Telegraph Co.'s lines. In Nov. 1905 he was appointed Manager of Telegraphs, G.T. Pacific Ry., with office at Montreal. Subsequently, in order to maintain direct supervision over all construction and development work in the west, his office was transferred to Winnipeg, and under his management not only was the construction of all telegraph lines on the G.T. Pacific accomplished but a commercial telegraph service was organized. On Jan. 1, 1913, his jurisdiction was extended to include the entire G.T.R. system, with office at Montreal. He acted for many years as electrical inspector for the Underwriters' Association, and was one of the original promoters of the Canadian Electrical Association and was its President in 1893.

**Henry Hulatt**, who has been appointed Manager of Telegraphs, Grand Trunk Ry. and Grand Trunk Pacific Ry., Montreal, and whose portrait appears in this issue, was born in London, England, Feb. 15, 1883, and after being engaged in commercial and journalistic work in England he came to Canada and entered railway service May 3, 1907, since when he was, to Mar. 1, 1908, clerk in stores department, Canadian Northern Ry., Winnipeg; Mar. 1, 1908 to Jan. 1, 1910, Secretary to the Manager of Telegraphs, G.T. Pacific Ry., Winnipeg. He was appointed chief clerk Jan. 1, 1910, and was the Manager's principal assistant in the organization of the G.T.P. railway and commercial telegraph service, and of the railway time service department. On Jan. 15, 1913, consequent on the Manager's jurisdiction being extended over the entire G.T.R. system, the head office was transferred to

Montreal and he was appointed Commercial and Traffic Superintendent of Telegraphs, at Winnipeg, in charge of telegraph lines west of Fort William, and at the same time was also appointed Superintendent of Time Service, which positions he held until his present appointment, Oct. 1, 1915. Under his direct supervision the commercial telegraph service has been extended to reach the principal cities in the Prairie Provinces and also to some important points in British Columbia, particularly Prince George and Prince Rupert.

### Association of Manufacturers of Chilled Iron Wheels.

At the annual meeting in New York Oct. 12, the directors were re-elected, G.W. Lyndon, continuing as President. J.A. Kilpatrick, President of the Dominion Wheel and Foundries Ltd., Toronto, and of the Albany Car Wheel Co., Albany, N.Y., is one of the Vice Presidents, and W.S. Atwood, Chief Engineer and General Manager of Works, Canadian Steel Foundries Ltd., Montreal, is one of the directors.

In submitting the annual report, the President said, among other things:—

It is gratifying to know that the chilled iron wheel has not only been able to maintain itself as the wheel standard of the United States and Canada, but it is beginning to supplant the European standards, as evidenced by the fact that several manufacturers of this association are supplying chilled iron wheels in large quantities to the French and Russian Governments. That our flange recommendations are in the line of improvement is fully demonstrated by the fact that we have at present over 500,000 wheels running that are finding their way through the present track construction without any complaints. The flange used on special wheels is 3-32 of an inch thicker than M.C.B. flange, and the flange as shown in our final argument is 3-16 of an inch thicker at the gauging point than the M.C.B. flange.

It is our purpose to have a sufficient amount of metal in reserve in order to enable us to design a chilled iron wheel of 950 lbs. or heavier; in other words, we are building for the future. We do not want the limits of the possibilities of the chilled iron wheel confined by the limitations of flange design. We want no unreasonable restrictions in the use of the chilled iron wheel. In March of this year we submitted to the chairman of the M.C.B. Association's wheel committee a new set of standard specifications recommending the following:

650 lb. wheel-brake pressure	19,000 lbs.
750 lb. " " "	32,200 lbs.
850 lb. " " "	40,000 lbs.

and detailed drawings of M.C.B. types of wheels and arch plate types of wheels. There is absolutely no limit of weight in the case of steel wheels, but when it comes to a design of chilled iron wheels, all sorts of restrictions follow. We all know what an additional 25 lbs. of iron will do to any of the Standard M.C.B. wheels in the matter of drop and thermal test, and the proof of this is manifest in our 625 lbs. M.C.B. pattern which we were enabled to re-design in 1909 by the additional allowance of only 10 lbs. of metal.

There are some tests which would establish the chilled iron wheel on a much firmer basis and I believe would be advantageous to all manufacturers. The tests that I refer to are comparative tests of the chilled iron wheel and the steel wheel. 1. Relative wearing values when rotating on a steel rail under various loads, the tread wear and flange wear to be observed separately. 2. Abrasion of rail under various conditions of

loading. 3. Determination of the intensity of heating stresses in all parts of the chilled iron wheel, namely, single plate, intersection of plates, front plate, back plate, brackets, etc. 4. Analysis of the thermal test. Intensity of stresses in various parts of the wheel, and effect of thickening the thermal ring, increasing and decreasing the tempera-

ture of the iron, etc. The thermal test should be made an intelligent one instead of the present crude affair that is supposedly alike for all weights of wheels. 5. Determination of stresses in the hub and plates of the chilled iron wheel due to pressing on axles. Variation in stresses due to various classes of machining.

### Freight and Passenger Traffic Notes.

The National Transcontinental Ry. is operating a freight service seven days a week, in and out of Winnipeg, owing to increased business.

The Vancouver Board of Trade proposes to ask the transportation companies for longer stopover privileges for through passengers from northern points.

The Grand Trunk Pacific Ry. has added a new parlor observation buffet car to the train leaving Edmonton, Alta., at 10.35, on Mondays, Wednesdays and Saturdays, for Prince Rupert, B.C.

The Grand Trunk Pacific Ry., on Oct. 3, put on an extra train between Calgary and Edmonton, Alta. A train leaves each city at 10 p.m., arriving at destination at 8 the following mornings.

The Grand Trunk Pacific Ry. announces that passengers may now be routed between Prince Rupert, B.C., and Seattle, Wash., via the Pacific Coast Steamship Co., as well as by the G.T. Pacific Steamship Co.

The Grand Trunk Pacific Ry. announces that the free side trip from Tofield to Calgary and return, authorized in current tariffs to through passengers, is for the future authorized from either Tofield or Edmonton and return.

The C.P.R. put in operation on Oct. 4 a tri-weekly train service between Wilkie and Kelfield, Sask., in place of the bi-weekly service heretofore given. The bi-weekly service between Wilkie and Cut Knife, Sask., was also made a tri-weekly one Oct. 5.

The Canadian Northern Ry. put in operation a train service on the following new sections of line, Oct. 3:—From Elrose Jct. to Dumbane, tri-weekly; from Laura to Carleton, one train each way per week. These new sections of line are in Saskatchewan.

The Industrial Bureau conducted by the Winnipeg city officials is, among other things, selling ocean tickets to aid in relieving the non-employment in the city. To this activity the city ticket agents have made objection, and the matter is under consideration.

A press report states that to facilitate the operation of the completed portion of the Kettle Valley Lines, the C.P.R. has leased to the K.V.R. its Nicola branch, which was built as the Nicola, Kamloops and Similkameen Ry., and extends from Spence's Bridge to Nicola, B.C., 47.1 miles.

The Grand Trunk Pacific Ry. put in operation, Oct. 3, a new train service between Winnipeg and Calgary, Alta., via Edmonton. Trains leave Winnipeg at 6 p.m., and Calgary at 10 p.m., reaching their destination on the second morning, so that passengers are only one business day on the trip. The trains have standard sleeping cars.

J.G. Taylor, General Superintendent, Saskatchewan Division, C.N.R., is reported to have said, Oct. 8, that consideration was being given to a proposal to put on a through train between Shaunavon, Sask., on the Weyburn-Lethbridge line, and Winnipeg as soon as conditions warrant, giving the Weyburn people a night service to Winnipeg.

Press reports state that a regular freight

and passenger service on the Canadian Northern Ry. will be started from Edmonton, Alta., to Vancouver, B.C., Nov. 1, and that a tri-weekly passenger service each way will be given. The service from New Westminster Bridge into Vancouver will be operated under an arrangement with the Great Northern Ry., which company's Vancouver terminals will be used.

The Edmonton, Dunvegan and British Columbia Ry. is operating two trains a week in either direction from Edmonton to McLennan, 261.7 miles. Train 1 leaves Edmonton at 7.30 a.m. on Tuesdays and Fridays, arriving at McLennan at midnight, and train 2 leaves McLennan at 5.15 p.m. on Wednesdays and Saturdays, arriving at Edmonton at 9.45 a.m. on Thursdays and Sundays. There are 39 stations and other stopping places on the line.

The C.P.R. has equipped its night trains between Calgary and Edmonton, Alberta, with the same type of electrically lighted and modern sleeping cars as are in use on the transcontinental trains. There are morning, afternoon and night trains in each direction, the day trains having as their special feature observation cars, with women's parlor, and men's smoking sections, with buffet department between the two, and an observation platform at the end of the car.

The Grand Trunk Pacific Ry. has inaugurated a through tourist car service in connection with the recently started through service on the National Transcontinental Ry. Tourist cars leave Calgary on Fridays, Sundays and Tuesdays, eastbound, and Toronto, on Tuesdays, Thursdays and Saturdays, westbound. The cars run over the G.T.R. from Toronto to North Bay; the Temiskaming and Northern Ontario Ry. from North Bay to Cochrane; the National Transcontinental Ry. from Cochrane to Winnipeg, and the G.T. Pacific Ry. from Winnipeg to Calgary.

The Board of Railway Commissioners has approved of a standard freight mileage tariff for the Canadian Northern Ry. from Port Arthur, Ont., westward to the Pacific Coast. The tariff is divided into two sections; Prairie standard covering the lines between Port Arthur and Tollerton, Alberta, and including interchange traffic between stations on the C.N.R. in Minnesota, and between all stations west of West Fort, Ont., to and including Tollerton, and stations east of Port Arthur to, and including, Sudbury. Pacific standard, covering lines between Tollerton, Alberta, westerly, also interchange between stations west of Tollerton and all stations east thereof to and including Sudbury, Ont. It is also specified as follows: "In the handling of traffic under this tariff between stations in sections A and B as specified above, it will sometimes be found that a combination of rates to and from Tollerton, Alta., using section A between Tollerton and stations east thereof and Section B between Tollerton and stations west thereof will make a lower through rate than would result from the application of the through mileage rate under Section B, in which event the combination to and from Tollerton may be applied."

## Cross Ties Purchased by Railways in 1914.

A total of 19,403,646 cross ties valued at \$8,664,914 were purchased during 1914 by Canadian railways for use in Canada. These companies consisted of 47 steam railways and 31 electric railways. Of this total 1,447,576 ties were treated with preservatives to retard decay. This is about 7% of the total, against 10% in 1913.

Table 1 gives details of the ties bought in Canada in 1913 and 1914, by kinds of wood. The cross tie purchases in 1914 showed a slight decrease of 2.4% from those of 1913, while the decrease from 1912 to 1913 was 6.7%. The diagram inserted in this bulletin shows the purchases increasing steadily up to 1912 when they amounted to over 21,000,000 ties. The greatest decreases from 1913 to 1914 were with the western species. Douglas fir, western larch, cedar and hemlock, and the imported woods such as oak, hard pine and chestnut. Of the 21 woods

TABLE 1.

Kind of Wood.	Number.	1913.			1914.		
		Value.	Av. Val.	Per cent.	Value.	Av. Val.	Per cent.

reported in 1914 eleven showed decreases.

Jack pine makes the most suitable tie material of the cheaper, more abundant woods of Canada. It has headed the list since 1911 when it took the place of white cedar, a more durable wood, but one of which the supply is rapidly becoming exhausted. These two woods have formed the greater part of the ties purchased in past years, and together formed over half the total in 1914.

The average prices paid for ties by the railways in 1914 showed only a slight increase over 1913. The prices in the last five years have been as follows,—1910, 38 c.; 1911, 39 c.; 1912, 44 c.; 1913, 43 c.; 1914, 45 c.

the mile. A large proportion of these were used for new construction at the rate of about 3,000 ties to the mile, and the remainder for maintenance of established lines. These companies paid an average of 45c. each for their ties against 58c. by the electric railways. The steam railways with 98.9 per cent. of the total for 1914 purchased all the ties of western larch, western spruce, chestnut, red pine, beech, maple, white pine and birch.

Table I shows the ties bought in 1913 and 1914 by electric railways. These lines bought 207,438 ties or about 1.5% of the total. These roads had a mileage of 1,561 in June 1914,

and therefore bought ties at the rate of 133 per mile. These purchases were mostly used for renewals, for which the demand is not so heavy as in the case of steam railways. The total number in this case is a decrease of 47% from 1913, while the average price per tie is the same. The greatest decreases were with western and eastern cedar and jack pine. Eleven woods were reported in 1914, and 15 in 1913, western larch, beech, maple and white pine being dropped from the list.

The foregoing bulletin was prepared by the Interior Department's Forestry Branch, R. H. Campbell, Director of Forestry.

## An Outline of a Year's Work for Roadmasters.

By T. Hickey, Roadmaster, Michigan Central Railroad, St. Thomas.

Since methods of arranging track work vary by reason of the extremes in climate and other conditions, it is necessary to fully consider methods that will best serve different conditions.

**Summer Work.**—It is good practice to hire and take on the summer forces on sections as early as conditions will allow. By so doing a better class of labor can be secured than could be later, as good men are sure to find employment elsewhere. The efficiency obtained from doing work early in the season is to be noted with marked results.

After first getting the track in reasonably good condition for surface and line, the work of tie renewals is begun. The constantly increasing cost of new and suitable ties, coupled with their growing scarcity, makes it imperative that they be handled with the greatest circumspection and care. To reduce the waste should be encouraged. A matter of great importance in the renewal of ties is to fully determine what ones should be taken out and what ones can safely be left in track for another year. Much can be done during the process of renewal to shorten or lengthen the life of the tie.

Tie tongs should be used instead of picks; if placed heart side down the fibres of the timber tend to shed water away from the inner timber. Spike holes should be carefully plugged. A special effort should be made for good results to get tie renewals made as early in the season as possible. By doing so they will have a better bearing in track and it will be found that track will remain in better condition after being surfaced.

After the work of tie renewals is completed, surfacing track should be commenced and continued. It is best to begin surfacing at the further end of the section and work towards headquarters. The secret of putting track in good condition, that will so remain for a reasonable length of time is one which largely depends on having the men well organized and in getting them to do the work as nearly alike as possible. Foremen when surfacing should test their level boards before commencing work every morning and know that they are accurate.

Ties should be tamped with tamping picks on stone ballast and with tamping bars on other ballast. The ends of the ties, and for 18 ins. inside of the rail and well under the rail, should be thoroughly tamped and the centre of the tie tamped with shovel blade. All spikes should be tamped down tight to the rail ahead of the surfacing. This will insure having ties tight to the rail when tamping and will eliminate creeping of rails. Foremen should see that all joints are full bolted and that they are tight as they proceed with the surfacing.

The track surfaced each day should be lined and trimmed and finished.

The work of mowing the right of way should be commenced on or about July 1, or before the weeds go to seed, it depending largely on the different climates, as to when the work can be done best. After the mowing is completed, the material should be burned. When burning is properly done, the starting of fires on the right of way and the spreading of same to adjacent property is eliminated. Time is well spent in thoroughly burning over the right of way. Much time is afterwards saved for the men in going to and fighting fires, as well as preventing fire claims against the company.

The surfacing of track should, for good results, be completed on or about Sept. 1 so that the men will have an opportunity to go over and carefully examine the track and take care of such spots as may be found out of surface and line. This work properly done will insure track going into winter in good condition from which it is reasonable to assume that better track conditions will exist during the winter.

**Autumn Work.**—Estimates should be made of the necessary material for repairs and for renewals for the next year; rail, ties, switch material, switch timbers, crossing plank, fence material, etc. In making this estimate, the condition of the different materials in use should first be carefully and fully examined, particularly so that of ties. The number of ties for tie renewals at the time of making the estimate should be considered as well as at the time of making renewals. Each tie condemned or intended to be taken out of track the next year should be marked. This mark can best be made by an axe or an adze. They should be all marked in about the same place so that other officials who may wish to examine may know where to look and readily find such marks. A matter of great importance in the inspection of ties for renewals is to determine what ones should be condemned, or what ones should be left in track with safety that would last another year. Several weak ties should not be allowed to remain together in track. Decayed ties should not be allowed to remain in curved track. A tie partly decayed in a tangent will sometimes last much longer with safety than on a curve. Thus a tie may be considered safe for one more year in one place where it would not be so considered in another. This matter is one that should be considered and care should be exercised not to injure good ties when testing for renewals.

Thoroughly good drainage is one of the most essential features of first class track. To accomplish it ditches should be well constructed and so maintained. Where an open ditch cannot be properly maintained,

tile should be used. When tile is used, grade stakes should be set in order to obtain the required depth. They should be covered with cinders or other porous material. Branch tiling should be laid at intervals from the main line of tile extending toward the track and be so laid as to be below the track ballast. Tile drains should be used in yards and at all points where necessary for proper drainage of tracks and switches, and be provided with catch basins securely covered with metal grating. It is important that yards be provided with proper and perfect drainage. The saving in labor and delay to traffic during the winter in keeping switches and interlockings in working order would soon pay for a proper drainage system.

General cleaning up of station grounds and right of way should be done and all material and scrap picked up and placed in proper places assigned for same before snow falls. Snow plow markers should be got ready and erected at points where required. Snow plows, flangers and other equipment for fighting snow should be put in proper condition, together with the necessary tools and placed on tracks where they can be readily got. Snow fences and other means that may be used for the preventing of snow drifting should be erected.

**Winter Work.**—During the winter the work of putting track to accurate gauge should be done. All ties should be full spiked, all bolts tightened and all joints full bolted. The necessary repairs should be made to right of way fences. This work can be done to advantage during the winter as there is more or less sod and grass around fence posts which prevents frost from readily entering the ground that would prevent such work. Such work when done during the winter will not interfere with the spring and summer's work.

Particular attention should be given to see that ditches are kept open, where the same get filled with snow, to insure a free passage for water. Other waterways should have proper attention to know that they are not obstructed by ice or other material. Ice should be kept out from around piling at bridges. It is a good practice to do as much work during the winter as can be done with economy. The advantage to be gained is that the track forces will not be reduced to a minimum. The work so done is going to help out with the summer's work.

In the spring each foreman should have at least a certain number of good experienced men to commence his summer's work with. He has done a large amount of work during the winter which he will be free from in the spring. He can, therefore, proceed with less men than if he had not done such work during the winter. Another marked advantage in working an additional man to help to do this work is the fact that a better class of men will be found in the service and the roadmaster will have much better material from which to select foremen. The selection of good foremen is getting to be quite a problem. I feel that this method would be an encouragement to get and hold good men in the service and get efficiency.

We cannot be reminded too often of the necessity of extra precautions for the protection of the traveling public, our fellow workmen and ourselves. Safety of the track is all important, but we must have intelligent safety or safety that is not wasteful either in labor or material.

**Spring Work** should begin as soon as the frost is out of the roadbed. The condition of the track where shimmed should have close attention and be closely watched while the frost is coming out. In order to

keep the track in good condition, the thick  
shims should be replaced by thinner ones  
as fast as the heaved roadbed settles. This  
work should be continued until the shims  
have all been removed from the track.

When the snow has disappeared, each  
foreman should make a general and thor-  
ough search for scrap which has accumu-  
lated during the winter from the different  
sources, much of which has been covered  
with snow. It should be carefully sorted  
and that which is found to be serviceable  
for use should be taken care of and that  
which is only fit for scrap should be col-  
lected and placed in scrap pile.

As soon as the ground becomes dry  
enough the work of cleaning up station  
grounds, yards and right of way should be  
proceeded with, and the refuse material  
disposed of to best advantage. Pile up  
neatly all track and other material in prop-  
er places. All refuse material that has ac-  
cumulated during the winter, including  
cinders, should be removed from tracks  
and from around buildings and from com-  
pany's stock yards.

All switches, leads and guard rails should  
be carefully examined and properly se-  
cured. Many parts may be found to be  
slightly out of adjustment and may not be  
readily noticed while being partly covered  
by snow and ice. Close inspection should  
be made of all foot guard blocking and  
repairs found necessary should be prompt-  
ly made.

The different kinds of work mentioned  
above, when taken care of at this time of  
the year, will enable the track force to  
make much progress when the summer  
work begins.—Maintenance of Way Bulet-  
tin.

## Nominations for Canadian Society of Civil Engineers' Officers.

G.H.Duggan, First Vice President, Domi-  
nion Bridge Co., Montreal, has been nomi-  
nated as President of the society for 1916.  
J.G.Legrand, Bridge Engineer, Grand Trunk  
Pacific Ry., Winnipeg, and T. H. White,  
Chief Engineer, Canadian Northern Pacific  
Ry., Vancouver, have been nominated for  
the vice presidency. The following nomi-  
nations have been made for councillors:—  
District 1—J.Duchastel, W.J.Francis, H.R.  
Safford, Chief Engineer, Grand Trunk Ry.,  
J.C.Smith, Montreal. District 2—J.L.Allan,  
Halifax and Eastern Ry., Dartmouth, N.S.;  
H.Donkin, Halifax, N.S. District 3—A.E.  
Doucet, ex District Engineer, National  
Transcontinental Ry., Quebec; L.A.Vallee,  
Engineer and Director of Railways, Pro-  
vince of Quebec. District 4—E.D.Lafleur,  
Chief Engineer, Public Works Department,  
Ottawa; W.P.Wilgar, Kingston, Ont. Dis-  
trict 5—J.R.W. Ambrose, Chief Engineer,  
Toronto Terminals Ry. Co.; A.L.Hertzberg,  
Division Engineer, C.P.R., Toronto. Dis-  
trict 6—C.H.Dancer, D.A.Ross, Winnipeg.  
District 7—D.O.Lewis, District Engineer,  
Canadian Pacific Ry., Victoria, B.C.; A.  
O'Meara, Victoria, B.C. Two members of  
council are to be elected for district 1, and  
one member for each of the other districts.

**A Windsor Freight Case.**—The American  
Coal & Coke Co. complained in May last  
that the Michigan Central Rd. unjustly dis-  
criminated against it and unduly prejudiced  
it by refusal to extend credit to it with re-  
spect to freight and demurrage charges ac-  
crued on carloads of coal held at Windsor,  
Ont., and Detroit, Mich., while extending  
credit to competitors under like circum-  
stances. The Commission has decided that  
the evidence fails to show that complain-  
ant is discriminated against or prejudiced  
within the meaning of the act.

## Alberta Public Utilities Commission Appointed.

An Edmonton press dispatch, of Oct. 20,  
states that an order-in-council has been pass-  
ed appointing G.H.V.Bulyea, ex-Lieutenant-  
Governor of the Province, Chairman of the  
Alberta Public Utilities Commission, at a  
salary of \$7,200 a year; and John Stocks,  
heretofore Deputy Minister of Public  
Works, and Judge Carpenter, of the District  
Court, Calgary, as members of the Commis-  
sion at salaries of \$6,000 each. J.E.Riley,  
Calgary, has been appointed Secretary.

The Alberta Public Utilities Act was pass-  
ed last session of the Legislature, but was  
not to come into force until the appoint-  
ment of the Board. A summary of its pro-  
visions was given in Canadian Railway and  
Marine World for June, pg. 220.

## Canadian Northern Railway's Through Service From Toronto West.

The C.N.R. will, on Nov. 1, inaugurate a  
passenger train service between Toronto  
and Winnipeg, the most important inter-  
mediate points being Parry Sound, Sudbury,  
Nipigon, Port Arthur, Fort William, Fort  
Frances, and Rainy River. The service  
will be tri-weekly, the west bound train  
leaving Toronto Union Station Monday,  
Wednesday and Friday at 10.45 p.m., ar-  
riving at Winnipeg Union Station, Wednes-  
day, Friday and Sunday at 5.45 p.m., and  
connecting there with the Alberta Express  
leaving 10.30 p.m. daily for Edmonton and  
intervening points, and with the Capital  
Cities Express leaving 8 p.m. daily for  
Prince Albert and intervening points. The  
east bound train will leave Winnipeg Union  
Station, Monday, Wednesday and Saturday  
at 5.15 p.m., reaching Toronto Union Sta-  
tion, Monday, Wednesday and Friday at  
2.30 p.m. The new trains, it is announced,  
will have electric lighted standard sleeping  
cars, dining cars, first and second class cars,  
and electric lighted tourist sleeping cars  
will be added about Nov 25.

A freight service has also been estab-  
lished between Quebec, Montreal and To-  
ronto and other eastern points and Winni-  
peg.

## Progress of Rogers Pass Tunnel Con- struction, Canadian Pacific Railway.

The following table, for which we are in-  
debted to J. G. Sullivan, Chief Engineer,  
C.P.R., Winnipeg, shows the progress made  
from Sept. 2 to Sept. 30, also the total pro-  
gress to Sept. 30.

EAST END.	Progress.	Total.

**A Railway Superintendent's Appreciation.**  
—R.S.Richardson, Superintendent, National  
Transcontinental Ry., Fort William, Ont.,  
writes: "I have been a subscriber to Cana-  
dian Railway and Marine World since 1901.  
Both myself and my staffs have been con-  
siderably benefited by your many articles  
of information, and I feel sure that all offi-  
cials appreciate the arrival of the paper.  
Proof of this is why it is on every official's  
desk."

**Western Canada Railway Club.**—At a  
meeting of the club in Winnipeg, Oct. 12,  
C.Murphy, General Superintendent, Mani-  
toba Division, Canadian Pacific Ry., spoke  
on the operation of railways, and J.B.Hugg,  
lecturer on municipal law at the Manitoba  
Law School, dealt with the regulation of  
public utilities by commissioners.

### Change in Standard Ballast Sections. Canadian Pacific Railway.

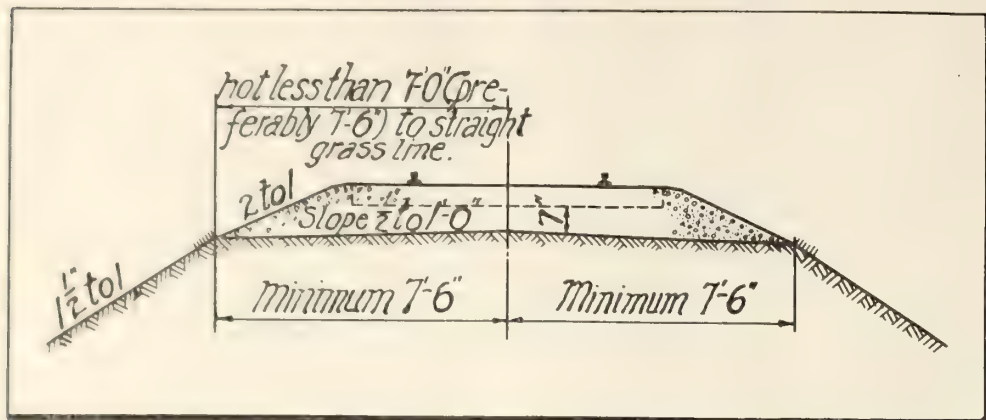

In the new standard plan of ballast sections just issued, by the Canadian Pacific Ry.'s Engineering Department, there are a number of changes from the previous

tion, which will enable trackmen to surface up track from time to time without having to deplete their ballast section for that purpose. The amount of ballast under the tie is 7 ins. and the section contains 3,000 cu. yds. of gravel per mile of single track and 5,300 cu. yds. per mile of double track.

The branch line gravel section has also

### National Transcontinental Constructio Suit.

Ottawa press dispatch, Oct. 18.—Action has been instituted in the local courts by O'Brien, McDougall and O'Gorman to recover \$220,000 from the Nipigon Construction Co. in connection with National Transcontinental Ry. contracts. In a counter action the Nipigon Co. claims 5% on all extras the O'Brien firm got from the N.T.R. Commission. The contract for 75 miles of the line north of Lake Nipigon, costing about \$3,000,000, was originally awarded to E.F. and G.E. Fauquier in 1908 and by them turned over to the Nipigon Co. on a 4% basis. The Nipigon Co. reserved to itself the building of the road to grade level and sublet to O'Brien, McDougall and O'Gorman the work from grade level to completion, on a further 5% basis. The latter's claim is based on an alleged delay of two years by the Nipigon Co. in bringing the line to grade level, and it is further claimed that some of the work was not properly done, the subcontractors having to carry out much of what should have been constructed by the Nipigon Co.

Branch lines gravel ballast sections, C.P.R.

standard that are of interest. The broken stone ballast section remains the same as the old standard, except that the subgrades have been widened to a minimum of 17 ft. instead of 16 ft. as formerly for single track, and to 30 ft. instead of 29 ft. for double track. The amount of ballast under the tie is 7 ins., the side slopes 1½ to 1, and the shoulder at the tie is 6¼ ins. The section contains 2,500 cu. yds. broken stone

been changed from a rounded to a straight line section with a 2 to 1 slope, and the subgrade has been increased from 14 to 15 ft. in width.

We are indebted to J. M. R. Fairbairn, Assistant Chief Engineer, Eastern Lines, C.P.R. for the foregoing information.

Canadian Government Ry.'s Operating Results.—F.P. Gutelius, General Manager, is

Twin Cities Local Freight Agents' Association has been organized, embracing officials of Canadian Northern, Canadian Pacific and National Transcontinental Railways in Port Arthur, Fort William and West Fort William. The officers are G.H. Drowley, Agent, Canadian Northern, Port Arthur, President; C.E. Legg, General Agent, Canadian Pacific, Fort William, Vice Presi-

Gravel ballast sections, Canadian Pacific Railway.

per mile for single track and 4,800 cu. yds. per mile for double track.

The gravel ballast section has been changed from a rounded to a straight line section, having a slope of 2¼ to 1 with a 9 in. shoulder against the tie and 7 ins. of ballast under the tie. The subgrade has been increased 1 ft. in width, making a 17 ft.

reported to have stated at Ottawa, Oct. 15, that the Intercolonial Ry. is doing better than last year, both freight and passenger earnings showing a considerable increase. In regard to the National Transcontinental Ry. he is reported to have said that while for the first few months it had run behind, the receipts from the grain traffic promised

dent; E.J. Travers, Fort William, Ont., Secretary-Treasurer.

The ninetieth anniversary of the opening of the first railway in the world was celebrated Sept. 27. On that date in 1825, the Stockton and Darlington Ry. was opened for public traffic between Stockton and Darlington, Eng. The locomotive was a four wheel-

Broken stone ballast sections, Canadian Pacific Railway.

base for single track and 30 ft. for double track, in place of 16 ft. and 29 ft., as formerly. The great advantage of this new form of section is that it allows a certain flexibility in the width of embankments to suit existing conditions, and also allows for a certain amount of storage on top of the embankment at the base of the ballast sec-

to equalize the revenue and operating expenses.

Government Employees on the harbor and terminal works at Port Nelson, Hudson Bay, in connection with the Hudson Bay Ry., have contributed \$3,650 to purchase machine guns at the discretion of the Minister of Militia.

ed one with a four wheeled tender, built by Stephenson and called Locomotion. It weighed about 14,675 lbs., and travelled at from 6 to 8 miles an hour. It is still in existence, but was put out of service in 1841, and has since been used for exhibition purposes, being shown in Philadelphia, Pa., in 1876.

# Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**Canadian Northern Ry.**—W.J.CURLE, heretofore Superintendent, Lake Superior District, Capreol, Ont., has been appointed Assistant Superintendent, Toronto District, vice W.R.Kelly, promoted. Office, Rosedale, Toronto.

W.R.KELLY, heretofore Assistant Superintendent, Toronto District, Toronto, has been appointed Superintendent, Lake Superior District, including the Nipigon Subdivision to Current, vice W.J.Curle transferred to Toronto. Office, Capreol, Ont.

R.J.KELLY, heretofore Trainmaster on construction, has been appointed Trainmaster with jurisdiction over Ruel, Oba, Long Lake and Nipigon Subdivisions, Lake Superior District, vice A. J. Gayfer, Division Engineer and Trainmaster, who has been relieved of the duties of Trainmaster, and who, as Division Engineer, will have his office at Capreol, Ont. Office, Hornepayne, Ont.

E.H.DREW, heretofore dining car conductor, G.T.Pacific Ry., Winnipeg, has been appointed Inspector Sleeping, Dining and Parlor Car and News Department, Western Lines, C.N.R. Headquarters, Winnipeg.

W.A.WHITE, Assistant Freight Agent, Calgary, Alta., is reported to have been appointed District Freight Agent, Regina, Sask., vice B.R.Marsales, transferred.

C.H.WORBY, heretofore Inspector, Sleeping and Dining Cars, Winnipeg, has been appointed Sleeping and Dining Car Agent, Saskatoon, Sask.

B.R.MARSALES, District Freight Agent, Regina, Sask., is reported to have been appointed District Freight Agent, Calgary, Alta.

A. BROSTEDT, heretofore District Passenger Agent, Calgary, Alta., has been appointed District Passenger Agent, Vancouver, B.C.

**Canadian Government Railways.**—W.D. STEWART, whose appointment as Assistant to General Storekeeper, Transcona, Man., was announced in our last issue, was mentioned as having previously been foreman of erecting shop, Intercolonial Ry., Moncton, N.B., but we are officially advised that prior to his present appointment he was Stores Inspector, Intercolonial Ry. and branch lines of the Canadian Government Railways.

(See also Intercolonial Ry. and National Transcontinental Ry.)

**Canadian Pacific Ocean Services Ltd.**—J. A. MARTIN, heretofore Agent, Allan Line Steamship Co., Glasgow, Scotland, has been appointed Assistant Manager, Canadian Pacific Ocean Services Ltd. Office, Liverpool, Eng.

**Canadian Pacific Ry.**—A.C.MACKENZIE, heretofore Engineer Maintenance of Way, Eastern Lines, Montreal, has been appointed acting General Superintendent, Atlantic Division, vice H.C.GROUT, who has been granted leave of absence. Office, St. John, N.B.

C.T.DELAMERE, heretofore acting Engineer of Construction, Eastern Lines, Montreal, has been appointed acting Engineer Maintenance of Way, Eastern Lines, vice A. C. Mackenzie appointed acting General Superintendent Atlantic Division, and will also continue to handle the Construction Department work. Office, Montreal.

A.DOBSON, heretofore storekeeper, Havelock, Ont., has been appointed storekeeper, Trenton, Ont., vice J. Fairbairn enlisted for overseas military service.

J.HARVEY has been appointed storekeeper, Havelock, Ont., vice A. Dobson transferred.

C.LAVENDER has been appointed storekeeper, John St., Toronto, vice W.H.Bainbridge transferred.

W.H.BAINBRIDGE, heretofore storekeeper, John St., Toronto, has been appointed storekeeper, West Toronto, Ont., vice A. D. BAKER enlisted for overseas military service.

F. RONALDSON, heretofore Locomotive Foreman, Lambton, Ont., has been appointed District Master Mechanic, Farnham, Que., vice H. Pepler.

J.M.CAMPBELL, heretofore Resident Engineer, District 1, Manitoba Division, Kenora, Ont., and who was appointed Roadmaster, District 2, Manitoba Division, Winnipeg, recently, has joined the force of engineers which has left Canada to work on railways in Russia.

T.D.RUGGLES, who was appointed recently Resident Engineer, District 1, Manitoba Division, Kenora, Ont., vice J.M.Campbell, transferred, has resigned and E.L. LANDORPH, heretofore Resident Engineer, District 2, Manitoba Division, Winnipeg, has been appointed in his place. Office, Kenora, Ont.

D.J.HAGERTY, heretofore Trainmaster, Northern Pacific Ry., Missoula, Mont., is reported to have been appointed to a position in the Traffic Department, C.P.R., Saskatoon, Ont.

F.GRIFFIN, heretofore storeman, Winnipeg, has been appointed storekeeper, Ignace, Ont., vice A. Stanfield transferred to Swift Current, Sask.

A.STANFIELD, heretofore storekeeper, Ignace, Ont., has been appointed storekeeper, Swift Current, Sask., vice J.M.Coles, who has enlisted for overseas military service.

The position of Assistant General Freight Agent, Vancouver, B.C., heretofore held by R.E.LARMOUR, whose appointment as General Agent, Freight Department, New York, was announced in our last issue, has been abolished, and the duties have been assumed by H.A.PLOW, Division Freight Agent, Vancouver, for the rail lines, and by F.H.CLENDENNING, Division Freight Agent, Vancouver for the steamship lines.

We are officially advised that no appointment will be made to fill the position of Assistant Division Engineer, Vancouver, B.C., formerly held by H.B.SIMS, who is at present in Europe with the Canadian Overseas Railway Construction Corps, the position having been abolished.

**Dominion Atlantic Ry.**—George Bury, Vice President, issued the following circular, Oct. 25:—"P.GIFKINS, who has with so much zeal occupied the position of General Manager of the Dominion Atlantic Railway for the past 15 years, and who has been associated with the service of that Company for a full period of 44 years, having expressed a desire to relinquish the arduous duties connected with the important position now held by him, the company has yielded to his expressed wish, and effective Nov. 1 next, he will be placed on the retired list in order that he may secure well merited leisure."

GEO.E.GRAHAM, formerly on the Western Lines, C.P.R., and laterly General Manager, Coquitlam Terminal Co., Ltd., Vancouver, B.C., has been appointed General Manager, D.A.R. Office, Kentville, N.S.

**Grand Trunk Ry.**—H.HULATT, Re appointment of as Manager of Telegraphs. See above under Grand Trunk Pacific Ry.

W.WALKER has been appointed Assistant Land Commissioner, Montreal.

The following station agents have been appointed,—Uxbridge, Ont., A.M.St.John; Komoka, Ont., J.H.Stuart.

**Grand Trunk Pacific Ry.**—H.HULATT, heretofore Commercial and Traffic Superintendent of Telegraphs, and Superintendent of Time Service, G.T.P.R., Winnipeg, has been appointed Manager of Telegraphs, G.T.R. and G.T.P.R., vice A.B.Smith, who has resigned on account of ill health. For the G.T.R. he will report to, and receive instructions from, the Vice President in Charge of Operation, Montreal, and for the G.T.P.R., he will report to, and receive instructions from, the Vice President and General Manager, Winnipeg. Office, Montreal.

The position of Commercial and Traffic Superintendent of Telegraphs, Winnipeg, heretofore held by H.HULATT, now Manager of Telegraphs, Montreal, has been abolished.

F.T.CALDWELL has been appointed Division Superintendent of Telegraphs, Lines Cochrane and west in Ontario, Manitoba, and Saskatchewan, with jurisdiction over all matters pertaining to construction and maintenance of telegraph and telephone lines and the operation of railway and commercial telegraphs. Office, Winnipeg.

F.T.CALDWELL, Division Superintendent of Telegraphs, Winnipeg, has also been appointed Superintendent of Time Service, vice H.Hulatt promoted.

W.J.ROONEY, heretofore Superintendent of Telegraph Plant, G.T.Pacific Ry., Winnipeg, has been appointed Division Superintendent of Telegraph, Lines in Alberta and British Columbia, with jurisdiction over all matters pertaining to construction and maintenance of telegraph and telephone lines, and operation of railway and commercial telegraphs, and his former position has been abolished. Office, Edmonton, Alta.

The following station agents have been appointed,—Waldron, Sask., G.A.Swan; Cudworth, Sask., M.Thornton; Springwater, Sask., J.T.Kerr; Trochu, Alta., J.B.Frevel.

**Intercolonial Ry.**—W.H.PIERIE, heretofore charge hand, has been appointed Car Foreman of Shops, Halifax, N.S., vice D.W. Murray assigned to other duties.

J.W.COADY, heretofore passenger car carpenter, has been appointed charge hand, Halifax, N.S., vice W.H.Pierie promoted.

W.R.FITZMAURICE, heretofore Assistant Superintendent, Moncton-St. Flavie District, Newcastle, N.B., has been appointed acting Superintendent, District 2, vice Evan Price deceased. Office, Campbellton, N.B.

C.D. BOVARD, heretofore station agent, Moncton, N.B., has been appointed acting Assistant Superintendent, District 2, vice W. R. Fitzmaurice promoted. Office, Campbellton, N.B. See also Canadian Government Railways.

**National Transcontinental Ry.**—H.M.BIRD has been appointed acting Trainmaster, District 3. Office, Graham, Ont.

H.J.BLACK, heretofore Resident Engineer, C.P.R., Sudbury, Ont., has been appointed Resident Engineer, District 2, N.T.R., between O'Brien and Superior Jct., vice J.E. Gibault, transferred. Office, Cochrane, Ont.

J.E.GIBAULT, heretofore Resident Engineer, District 2, Cochrane, Ont., has been appointed Resident Engineer, District 1, vice A.Babin. Office, Quebec.

See also Canadian Government Railways. **Quebec Central Ry.**—GEORGE BURY, Vice President, Canadian Pacific Ry., has also been elected President of the Q.C.R., vice D.McNicol.

**Toronto, Hamilton and Buffalo Ry.—R.F. Hill,** heretofore chief clerk, General Freight and Passenger Agent's office, has been appointed Assistant General Freight and Passenger Agent, Office, Hamilton, Ont.

**Winnipeg Joint Terminals.—J.W. Glover,** heretofore Night Yardmaster, has been appointed General Yardmaster, vice W. McAuley, whose appointment as Trainmaster was announced in our last issue.

**W. BOATES** has been appointed Night Yardmaster, vice J.W. Glover promoted.

The Eastern Canadian Passenger Association has changed its constitution by providing for a general baggage agents' committee to consider all matters pertaining to baggage or traffic that may be referred to it by the Association. For the current year the committee is composed of the general baggage agents or other officers in charge of baggage departments of the Canadian Government, Canadian Northern, Canadian Pacific, Grand Trunk, Michigan Central and New York Central Railways. The Chairman is R.L. Fairbairn, General Passenger Agent, Eastern Lines, Canadian Northern Ry.

The American Association of General Baggage Agents' annual convention was held at Kansas City, Mo., Oct. 13 and 14, when the main subject discussed was the matter of baggage rules. Five standing committees were appointed to consider the subjects of standard baggage rules, arbitration, baggage checks, standard forms for office methods and accounting, and telegraph code. The officers for the current year are, —J.F. Dugan, Baltimore and Ohio, President; J.E. Quick, Grand Trunk and Grand Trunk Pacific, Toronto, Secretary-Treasurer. The next annual convention will be held at Boston, Mass., June 21, 1916.

Milk Shippers applied to the Board of Railway Commissioners recently for a reconsideration of the order requiring shippers to supply a man to assist in unloading empty milk cans and the question of general handling of the same by railways. In notifying the railway companies of this the Board of Railway Commissioners stated that the companies would be required to show cause why a general order should not issue fixing the minimum number of milk cans requisite, or the minimum car load rate necessary, to entitle a shipping station to a separate car.

Three informations were laid Oct. 6, against Canadian Northern Ry. officials at Regina, Sask., under sec. 90 of the Sales of Liquor Act passed last session of the Legislature. The informations charge the company with running its trains through the province without showing the necessary signs provided for in the regulations made under the Act.

**Taxing U. S. Railways Offices.—**The Toronto Court of Revision affirmed the business assessment of several United States railway companies having offices in the downtown district. It was contended on behalf of the companies that the offices were only information bureaus for the convenience of the public and that no business was done in them.

**Machinery Freight Rates to Espanola.—**The Spanish River Pulp and Paper Mills, Sault Ste. Marie, Ont., complained to the Board of Railway Commissioners recently that the C.P.R. refused to apply the Sault Ste. Marie, Mich., commodity rate of 25¢ per 100 lbs. on machinery from Massachusetts points to Espanola, Ont.

The Caledonia Springs Hotel, Caledonia Springs, Ont., which has been operated for some years by the Canadian Pacific Ry., has been closed permanently.

## Express Rates From London Confirmed by the Board of Railway Commissioners.

Commissioner McLean has given the following judgment, which was concurred in by the Chief Commissioner, Sir Henry L. Drayton:—

In the complaint launched by the London Board of Trade, it was alleged that discrimination was shown in favor of Toronto in express charges from that city in comparison with those charged from London. In support of this contention, the following examples of rates were given: Toronto to Brantford, 63 miles 50c; London to Brantford, 50 miles, 60c. At the hearing, supplemental detail with reference to the discrimination complained of was submitted in the following statement of rates:

Toronto to Brantford .....	58 miles—50c.
London to Brantford .....	56 " —60c.
Toronto to Woodstock .....	88 " —60c.
London to Woodstock .....	27 " —40c.
Toronto to Ingersoll .....	97 " —75c.
London to Ingersoll .....	20 " —40c.
Toronto to Tilsonburg .....	96 " —75c.
London to Tilsonburg .....	40 " —50c.
Toronto to Berlin .....	63 " —60c.
London to Berlin .....	59 " —60c.
Toronto to Paris .....	71 " —60c.
London to Paris .....	48 " —50c.

In the complaint as launched it was stated that the express companies claimed that the rate from Toronto was lower because they obtained more business from Toronto. The express companies in their answer said that the rate has not been made lower from Toronto than from London because of difference in amount of business involved. In the Board's investigation in the Express Case, a revision of the rates was made. The revision of the standard rate brought down those in excess of the standard. In a considerable number of instances, the rates actually in operation were because of special conditions or some accident in the development of the rate lower than the standard rates as approved. The tariffs have been checked and show that there are a large number of rates which on account of special conditions are lower than the standard. At the time the standards were approved the express companies desired to level up the existing rates, but the Board took the position that existing rates should not be increased. There is, therefore, a disparity in the rates charged as shown in the statement above set out. The express companies stated their willingness to remove the alleged discrimination by restoring all the rates in the section in question to standard. The result of this would be to increase a large number of existing rates affecting places whose positions have not been developed before us.

While there is in respect of particular places the difference in regard to rate basis which has been shown, it is not established that the merchants of London, on whose behalf the complaint is launched, are injured thereby. A mere statement as to rates is not conclusive as showing the existence of unjust discrimination or undue preference. There must be evidence of the traffic moving and the effect thereon. Further, the discrimination must be one creating an actual detriment. In the tabular statement furnished, the complaint turns on the Toronto rate basis being lower for a longer distance. It was not, however, in any way established that business which was naturally tributary to the London merchants had been taken away from them because of the lower rate basis enjoyed by Toronto. In other words, it has not been shown that business which would naturally go to London has been taken to Toronto by a difference in rates. The rates for equivalent distances out of Toronto and London have been checked, and it would appear from the

following statement that the rates are the same for the same distances:

Toronto to Woodstock .....	88 miles—60c.
London to Hornby .....	87 " —60c.
Toronto to Ingersoll .....	97 " —75c.
London to Belle River .....	95 " —75c.
Toronto to Tilsonburg .....	96 " —75c.
London to Streetsville .....	94 " —75c.
Toronto to Berlin .....	63 " —60c.
London to Guelph .....	73 " —60c.
Toronto to Paris .....	71 " —60c.
London to Hamilton .....	75 " —60c.

Reference has been made to the fact that in a very considerable number of cases the rates charged are below what would apply if the standard rates were charged. As indicative of this the following summaries show cases where on the movement out of London, London may reach various points on rates below the standard rates:

Where the rate charged is 75c. and the standard rate is 90c.—Summerville, Islington, Lambton, West Toronto, Parkdale, North Toronto, Toronto, Snelgrove, Mooretown, Corunna, Courtright, Watson, Sombra, Windsor, Cooksville, Dixie.

Where the rate charged is 60c. and the standard rate is 75c.—Guelph, Campbellville, Christies, Milton, Hornby, Lisgar, Fergus, Elora, Moffatt, Corwhin, Arkell, Prison Farm, Guelph, Harriston.

Where the rate charged is 50c. and the standard rate is 60c.—Dumfries, Galt, Chatham, Leslie.

Where the rate charged is 40c. and the standard rate is 50c.—Woodstock, Innerkip, Blandford, Drumbo, Wolverton, Putnam, Harrietsville, Glencoe, Newburg.

To bring up to standard all rates now below standard would dislocate the rate situation; and it does not appear that this would be of appreciable advantage to shippers. In the absence of any evidence that the existing rate situation works to the detriment of London merchants by taking from them business which would normally go to them and by transferring it on account of the rate difference to Toronto merchants, the Board is unable to find that the existing situation works an unjust discrimination.

**Russian Military Railway Construction.—**About 100 men left Winnipeg, Oct. 9, to meet others at various points en route to Montreal, where it was estimated there will be altogether between 500 and 600 men. Thence they were to proceed to New York, and sail for Archangel, Russia. They have been engaged for railway construction work by the Russian Government.

The C.P.R. freight department at Winnipeg notified agents Oct. 13 to at once cease accepting package freight to the east via Fort William when routed via steamships of lake lines, viz., Canada Steamship Lines, Great Lakes Transportation Co., Mutual Transit Co., on account of the close of the navigation season.

In an action in the Alberta Courts, Justice Stewart has decided that the C.P.R. has no lien on the crops of lands sold by it under deferred payments. The interim injunction obtained against three persons was dismissed and the company ordered to pay the costs.

**Canadian Pacific Ry. Employees in Toronto** and district, who organized recently for the purpose of making monthly contributions for patriotic purposes, have subscribed \$500 to the Toronto and York County Patriotic Association.

The Grand Trunk Pacific Ry. is about to remove its Winnipeg city ticket office from 260 Portage Ave. to the corner of Portage Ave. and Main St., at present occupied by the Gordon-Mitchell Drug Co.

## Railway Development.

### Projected Lines, Surveys, Construction, Betterments, Etc.

**Alberta and Great Waterways Ry.**—R. W. Jones, Chief Engineer of the Alberta Department of Railways, returned to Edmonton, Oct. 4, after an inspection of the railways under construction in the northern part of the Province. He is reported to have said that tracklaying had been completed on the A. and G.W. Ry. to mileage 135, or 21 miles north east of Lac La Biche, and that grading had been completed on 141 miles of the distance between Lac La Biche and Fort McMurray. The uncompleted grading is between mileage 203 and 215, and some miles on the Clearwater Valley. The work on the latter section is rather heavy. The route from the present end of steel runs northeasterly to the west end of Clearwater Lake, and thence in a generally northerly direction, crossing the Christina River and passing west of Sharp Point until it reaches the confluence of the Christina and Clearwater rivers. The line then gradually descends, on a 1% gradient, the valley of the Clearwater River, the banks of which are 200 ft. high, the valley being from two to three miles wide, until it reaches Fort McMurray. It is expected that grading will be completed early in November. Ballasting has been completed to Lac La Biche, and it was expected to have the ballasting to the present end of steel completed by Oct. 31. (Oct., pg. 392).

**Athabasca and Fort Vermillion Ry.**—A. C. Galbraith, Chief Engineer, is reported to have said at Athabasca Landing, Alberta, Oct. 1, that the engineering party engaged in making the reconnaissance survey left Wabiscaw, Aug. 26, and was expected to reach the proposed terminus at Fort Vermillion, Oct. 31. From the partial reports sent in the work has proceeded satisfactorily. (Oct., pg. 392).

**The Burrard Inlet Tunnel and Bridge Co.'s** directors were informed by the British Columbia Government, Oct. 15, that the question of the building of the projected bridge across the Second Narrows at Vancouver would be taken up as soon as J.W. Stewart, of the Pacific Great Eastern Ry. returned to Vancouver. (Oct., pg. 392.)

**Dominion Government Railway to Hudson Bay.**—A couple of bad sink holes are reported to have developed at mileage 208, and to have delayed the progress of work. Otherwise it is said to be proceeding satisfactorily.

Owing to reported gold discoveries in Northern Manitoba, a suggestion has been made that a line be built from Pas, and it is stated that the 15 mile branch could be built for \$150,000. The Provincial Government will, it is said, consider the building of the line if the Dominion Government decides not to undertake it. (Oct., pg. 392).

**Edmonton, Dunvegan and British Columbia Ry.**—The branch line from Spirit River to the Grande Prairie Settlement starts at the Spirit River Settlement, crosses the Burnt River, Bad Seal River, and the wagon road from Dunvegan to Lake Saskatoon, and passes by Lake Clermont to Grand Prairie City on the Beaver River, 60 miles. The maximum gradient is 1%, and the maximum curvature six degrees. We are officially advised that the construction is easy, the only difficult piece of work being at the crossing of the Saddle Mountain. The grading is 60% completed and should be finished by Nov. 30. Tracklaying is expected to be completed by Feb., 1916. J. Timothy is the contractor, and W. R. Smith, Edmonton, Chief Engineer.

On the main line from the Big Smoky River to the Spirit River, some delays have been experienced owing to slides on the east bank, but it is confidently expected that steel will be laid on the 67 miles early in 1916. While a regular passenger service is being operated between Edmonton and McLennan, a contractor's service is being operated from McLennan to Smith's Settlement. (Oct., pg. 392).

**Farnham and Granby Ry.**—Application is being made to the Dominion Parliament for an extension of time for the building of the projected line from the C.P.R., near Farnham, easterly to Granby, and thence northeasterly to Windsor Mills or Richmond, Que. Major C.L. Herve, M.Can.Soc.C.E., Montreal, who is now in England with the Canadian Overseas Railway Construction Corps, is one of the provisional directors. The solicitors for the applicants are Pringle, Thompson, Burgess and Cote, Ottawa. (April, 1914, pg. 165.)

**Grand Trunk Pacific Ry.**—Collingwood Schrieber, General Consulting Engineer to the Dominion Government, left Winnipeg, Sept. 28, to make one of his periodical trips of inspection over the line to Prince Rupert, B. C.

The trestle bridge over the Minnewastie River, near Uno, Man., which was blown down by a cyclone early in September, has been rebuilt and was reopened for traffic, Sept. 29. It is 1,700 feet long, and 135 feet high. Pending reconstruction the regular train service was operated over the C.P.R.

E.J. Chamberlain, President, is reported to have stated that it is expected to proceed with the construction of the terminal facilities at Regina, and three other points in Saskatchewan, under the agreement with the Provincial Government, early next spring. (Aug., pg. 307).

**Grand Trunk Ry.**—The question of the elevation of the tracks in Montreal came before the Board of Railway Commissioners at Montreal, Sept. 28. After hearing statements from the city and the company, Sir Henry Drayton, Chief Commissioner, intimated that if it could be shown how funds could be raised for the purpose the company would be glad to go on with the work. In the present financial situation it was impossible to order the company to proceed. The Chamber of Commerce meeting in Montreal, Sept. 30, suggested that the Dominion Government guarantee a bond issue for the greater part of the amount.

The company proposes, according to press reports, to rebuild at once the burned station at Eganville, Ont.; to rebuild portions of its wharves at Owen Sound, Ont., and to extend a spur line in Norwich tp., Ont., to a condensed milk factory located on lot 10, con. 1 of the township. (Oct., pg. 392).

**Intercolonial Ry.**—A press report states that the Intercolonial and the National Transcontinental tracks are being consolidated for about 10 miles west from Moncton, N.B. The two lines parallel each other for this mileage, and in order that there may be only one track to keep in repair, the Intercolonial track is, it is said, being taken up.

**Intercolonial Ry.**—A press report states that engineers are making surveys at Painsec, N.B., through Baie Verte, Tignish, Pugwash and on to Truro, N.S., for a revised location for portions of the line. The report adds that the surveys between Truro and the Nova Scotia-New Brunswick bound-

ary are practically completed, and that the work in New Brunswick will be finished in December. (Oct., pg. 392).

**Kettle Valley Lines.**—Tracklaying is reported to have reached to eight miles beyond Ladner Creek, having been carried over the creek on a temporary structure. It is expected to connect up with the rest of the line at Coquihalla summit Nov. 30. Satisfactory progress is reported to have been made with the building of the permanent steel bridge over Ladner Creek. (Oct., pg. 392).

**National Transcontinental Ry.**—F.P. Gutelius, General Manager, Canadian Government Railways, is reported to have said, Oct. 6, that the entire line is in splendid shape, both physically and as regards rolling stock.

A press report states that preparations are being made at Neelands, 30 miles west of Cochrane, Ont., for the erection of a large pulpmill, and that it will require the building of about three miles of line to give the mill connection with the N.T.R. (May, pg. 183.)

### Canadian Pacific Railway Construction, Betterments, Etc.

**Eastern Division.**—The Board of Railway Commissioners has authorized the company to build an industrial spur for the Hull Iron and Steel Foundries Co., Hull, Que.

At a sitting of the Board of Railway Commissioners at Belleville, Ont., recently, application was made for an order to elevate the tracks within the city to allow of the construction of subways, and for the building of an interswitching track with the Canadian Northern Ontario Ry.

**Ontario Division.**—A press report states that a contract has been let to the Foundation Co., Montreal, for the construction of a bridge at Darling, Ont., on the Toronto-Sudbury line, 114.8 miles from Toronto, at a cost of about \$50,000.

**Manitoba Division.**—A press report states that the company is about to build an industrial spur to the Western Terminal Elevator Co.'s site, Fort William, Ont.

**Alberta Division.**—It is reported that the C.P.R. is planning to spend about \$7,000 in making improvements in the sanitary conditions at the Alberta stockyards in East Calgary.

The City of Calgary is reported to have reached an agreement with the company under which the cost of the erection of any subway ordered to be built under the company's tracks to the Dominion Government grain elevator at Calgary, should be divided between the city and the company.

**British Columbia Division.**—The company is reported to have transferred its waterfront property at Arrowhead, B.C., to the Dominion Government for wharf construction purposes. (Oct., pg. 393.)

### Progress of Quebec Bridge Construction.

The north anchor arm of the bridge across the St. Lawrence River at Quebec, being built by the Dominion Government, was completed last year and the north cantilever arm and the south anchor arm are under construction. It is expected that by the end of the year the erection of these two arms will be completed. It is also expected that, during 1916, the south cantilever arm will be erected, and the suspended arm will be put together at a site about three miles below the bridge. This member of the bridge will be erected on pontoons and floated into position, and it is hoped to complete this work also next year. The steel work is being manufactured and erected by the St. Lawrence Bridge Works.

### Traffic Orders by the Board of Railway Commissioners.

#### Kettle Valley Railway Sleeping and Parlor Car Fares.

24225. Sept. 28. Re application of the Kettle Valley Ry. for approval of its Standard Passenger Tariff, C.R.C. no. S-2, covering sleeping and parlor car tolls: It is ordered that the said tariff be approved.

#### Preparing Canadian Northern Passenger Tariffs.

24227. Sept. 27. Re application of Canadian Northern Ry. for approval of bylaw authorizing R.L.Fairbairn, General Passenger Agent, to prepare and issue tariffs in respect of tolls upon passenger traffic to be charged by the company for all passenger traffic that may be carried upon its railway, or any part of the Canadian Northern Ry. system, excepting to and from points west of Port Arthur or West Fort upon its railway, or any part of its railway system, and to specify to whom, the place where, and the manner in which such tolls shall be paid: It is ordered that the said bylaw be approved.

#### London, Ont., Express Rates.

24236. Re complaint of the London, Ont., Board of Trade, against the alleged discrimination shown in favor of Toronto in express charges from that city as compared with those charged from London: Upon hearing the complaint in London, July 15, 1915, the London Board of Trade being represented at the hearing, and what was alleged; and upon reading the submissions filed—it is ordered that the complaint be dismissed.

#### Carload Rates on Salted Meats.

24241. Sept. 27. Re complaint of Canadian Manufacturers Association that the railway companies insist on charging 4th class rates on salted meats, in carloads, instead of 5th class, as provided in Canadian Freight Classification item 54, page 113. Upon hearing the complaint at Ottawa, Sept. 21, in the presence of representatives of the Canadian Manufacturers Association, the Canadian Freight Association, the Canadian Pacific, Grand Trunk, and Canadian Northern Railway Companies, and the Pere Marquette Railroad Company, and what was alleged: It is ordered that the complaint be dismissed.

#### Dried Fruit Rates From San Francisco to Fort William.

24242. Sept. 30. Re application of D. G. Mathias for a rate of \$1.10 on dried fruit from San Francisco, Cal., to Fort William, Ont., upon hearing the application at Fort William, June 14, the Canadian Pacific, Canadian Northern, and Grand Trunk Pacific Railway Companies being represented, the applicant appearing in person, and what was alleged; and upon reading what has been submitted by the railway companies mentioned it is ordered that the application be refused.

#### Canadian Northern Passenger Rates in Alberta and British Columbia.

24254. Oct. 2. Re application of Canadian Northern Ry., under sec. 331 of the Railway Act, for approval of its Standard Passenger Tariff, C. R. C. no. W-1283, covering a rate of 4c. a mile over the Mountain Division and 3c. a mile east thereof: Upon the report and recommendation of the Chief Traffic Officer it is ordered that said tariff, showing a rate of 3c. a mile, Edmonton, Alta., to and including Tollerton, Alta., and 4c. a mile west of Tollerton, to and including Vancouver, B. C., be approved.

#### Diverting Cars to Fort William Elevators.

24277. Oct. 5. Re complaint of B. J. Ostrander & Co., of Winnipeg, that the railway companies refuse to divert cars con-

taining grain from one lake front elevator to another after the cars have reached the yards at the lake front: Upon hearing the complaint at Fort William, Ont., June 14, the complainant and the Canadian Pacific, Canadian Northern, and Grand Trunk Pacific Railway Companies being represented, it is ordered that the complaint be dismissed.

#### Rates on Apples, etc., to Halifax for Export.

24313. Oct. 16. Re complaint of United Fruit Growers, Nova Scotia Fruit Growers, and King's County Board of Trade against the advanced rates on apples and potatoes to Halifax for export, as published in Dominion Atlantic Ry. tariffs, C.R.C. no. 454 and C.R.C. no. 455, respectively, to become effective Oct. 25. It is ordered that the said advanced rates be suspended, pending a hearing by the Board.

#### Canadian Northern Flag Stations.

General order 150, Oct. 19, re application of Canadian Northern Ry. for an order amending General Order 54, Jan. 6, 1910, requiring construction of flag stations in Manitoba, Saskatchewan, and Alberta, from or to which l.c.l. freight and passenger traffic is carried: Upon reading what is filed in support of the application, and its appearing that the wording of the order does not clearly carry out its intention, it is ordered that the said order be amended by striking out the words "All freight traffic" in the first line of clause 3, and substituting therefor the words, "All l.c.l. freight traffic."

### Quebec Central Railway Company's Annual Report and Meeting.

The report for the year ended June 30 presented at the annual meeting in Montreal, Oct. 20, over the signature of David McNicoll, President, states that the company's property is leased to the Canadian Pacific Ry. Co. for 999 years, from Jan. 1, 1913. Interest on the ordinary stock at 4% per annum for four years from July 1, 1912, and 5% per annum in perpetuity thereafter, and interest and principal on the 4% first mortgage debenture stock, 3½% second mortgage debenture stock, and 5% third mortgage bonds, is guaranteed.

#### REVENUE ACCOUNT.

Freight revenue .....	\$903,397.77
Passenger revenue .....	354,407.26
Mails .....	31,106.59
Express, miscellaneous, etc. ....	56,817.52
	<b>\$1,345,729.14</b>

Maintenance of way and structures. ....	\$181,026.44
Maintenance of equipment .....	136,365.30
Traffic expenses .....	27,340.92
Transportation expenses .....	506,947.90
General expenses .....	49,022.80
Taxes .....	19,180.13
Expenses outside operations .....	8,363.86

Total operating expenses .....	\$928,247.35
Balance carried to Net Revenue Account .....	417,481.79
	<b>\$1,345,729.14</b>

#### NET REVENUE ACCOUNT.

Balance brought forward from June 30, 1914 .....	\$ 75,770.82
Balance from revenue account .....	417,481.79
Other income .....	8,615.89
	<b>\$501,868.50</b>

Interest on 4% debenture stock 12 months .....	117,741.60
Interest on 3½% debenture stock 12 months .....	57,572.66
Interest on 5% third mortgage bonds 12 months .....	82,246.66
Dividend on share capital stock (4%) .....	135,264.12
Balance .....	109,043.46
	<b>\$501,868.50</b>

Out of the net revenue balance of \$109,043.46 an appropriation of \$25,000 was made to additional equipment and betterments and improvements to property, leaving \$84,043.46 carried forward.

The directors for the current year are:—

George Bury, President; I.G.Ogden, Vice President; J.H.Walsh, General Manager; E.W.Beatty, K.C., Montreal; C.D.Brassey, and Thos.Lindley, London, Eng. L.A.Carrier represents the Quebec Government.

### Among the Express Companies.

Dominion Ex. Co.'s employees on the Pacific Division have contributed \$1,000 for the purchase of a machine gun for use as the Minister of Militia may direct.

The Prince Edward Island act to amend the acts regarding the imposition of taxes on companies in the Province, passed at the last session of the Legislature, provides that there shall be levied on every express company doing business within the Province, and not having its principal office or organization therein, a tax of \$150.

Stephen Tingley, who died at Vancouver, B.C., Oct. 9, aged 76, was, in his early days, closely associated with Barnard's Express, running between Yale and Cariboo, and was actively engaged in the business from 1864 to 1897. Barnard's Express was the forerunner of the British Columbia Ex.Co.

A first distribution of the accumulated proceeds of the liquidation of the United States Ex.Co., will be made to stockholders during November. D.I.Roberts, formerly General Manager, Quebec, Montreal and Southern Ry. and Napierville Jct.Ry., Montreal, as liquidator of the U.S.Ex.Co., has disposed of the various operating contracts, express equipment, etc., but has not yet cleared up the bonds and stocks of other companies. These represent a par value of \$5,076,800, and consist of stock in nine railway companies, bonds in some 200 other companies, and some mortgages.

A press report from Ottawa states that the question of express delivery and collection limits in cities and towns will come before the Board of Railway Commissioners shortly, to be dealt with in a general way. Applications have been made to the Board from time to time for certain extensions of these limits in various cities and towns, and each application has been dealt with on its merits. The report indicates that it is proposed to hear both sides of the matter, and if possible adopt some general plans to be applied to cities and towns as a whole, with the view of avoiding numerous individual applications for extensions without reasonable grounds.

The Canadian Ex. Co.'s operating statistics for May, and for 11 months ended May 31, compared with those for similar periods in 1914 are as follows:

	May 1915.	May 1914.
Mileage of all lines covered....	8,876.50	7,080.31
Charges for transportation....	\$273,231	\$271,973
Express privileges, Dr. ....	127,623	126,930
Operations other than transportation .....	5,125	10,802
Total operating revenue .....	150,733	155,846
Operating expenses .....	127,533	130,933
Net operating revenue .....	23,199	24,913
Uncollectible revenue from transportation .....	6	
Express taxes .....	4,000	3,000
Operating income .....	19,193	21,913
	11 months to May 31 1915.	11 months to May 31 1914.
Charges for transportation .....	\$2,844,241	\$2,910,153
Express privileges, Dr. ....	1,417,936	1,380,318
Operation other than transportation .....	55,119	102,864
Total operating revenue ....	1,481,244	1,632,699
Operating expenses .....	1,411,289	1,530,443
Net operating revenue .....	70,135	102,256
Uncollectible revenue from transportation .....	95	
Express taxes .....	44,000	31,700
Operating income .....	26,040	70,556

The Marquis and Marchioness of Aberdeen and Temair had a Canadian Pacific private car placed at their disposal for their trip from Toronto to San Francisco.

# Electric Railway Department

## Petrol Hydraulic Motor Car for Lacombe and Blindman Valley Railway.

A car of a type that is novel in this country has been delivered to the Lacombe and Blindman Valley Ry., which is under construction from Lacombe to Rimby, Alberta. The car embodies the feature of a semi-direct drive, that has the advantage of flexibility. It is typically English in design, weighs 20 tons, is 33 ft. long overall, and 8¼ ft. wide overall. The truck centres are 18 ft., and the wheel base of the truck wheels 5½ ft. The seating capacity is 36, provided in rattan covered cross seats, with a central aisle.

The power transmission is on the Hele-Shaw system, wherein a variable stroke oil pump, directly driven by an engine, forces oil through pipes to an oil motor, which in turn, drives the axles of the car. The power of the driving engine is thus converted into movement of oil under pressure, and as the quantity of oil pumped is variable through the variable stroke pump, the speed of the oil motor, which is directly dependent on the quantity of oil delivered to it, can be directly regulated. By a suitable movement

in which the plungers reciprocate. Inside the fixed casing, there is a guide frame, which is normally and when the pump is running idle, concentric with the outer casing and cylinder body. In this guide frame is cut a circular guide channel, and the plungers are connected to this by slipper blocks. As soon as the guide frame is moved in either direction so that its centre becomes eccentric to the outer casing, the plungers are caused to reciprocate in the cylinders, the amount of stroke varying with the amount of eccentricity. Oil is drawn in and discharged through the hollow central shaft, around which the plungers rotate. The special feature of the pump is that its capacity and direction in which it forces the oil can be varied at will by simply altering the position of the guide frame.

The oil under a pressure of upwards of 2,000 lbs. per sq. in., is transmitted from the central shaft of the pump, through a heavy steel pipe, to the two hydraulic motors on the rear truck. The oil is delivered from the transmission pipe to the piping of the

and Co., London, Eng., with whom an order has also been placed for a locomotive operating on the same system.

## The Canadian Autobus Company's Franchise in Montreal.

The Supreme Court of Canada gave judgment at Ottawa, Oct. 12, dismissing the petition of D. Robertson, Montreal, who sought the reversal of two judgments of the Quebec courts, holding that the City of Montreal had acted legally when it passed bylaw 483 on June 10, 1912, granting a 10-year franchise to the Canadian Autobus Co. The original action was tried in Sept., 1912, before Justice Demers, who held that the City Council was acting within its powers when it passed the bylaw, which Mr. Robertson desired to have declared ultra vires. This view was upheld in the Quebec Court of Appeal. The bylaw granted the Canadian Autobus Co. an exclusive franchise for the operation of motor bus traffic in Montreal for ten years. In addition to the question of the bylaw itself, there was also involved in the case the question whether an individual ratepayer had the right to bring such an action, without the

Petrol-Hydraulic Motor Car for Lacombe and Blindman Valley Railway, showing Interior Arrangement and Transmission.

of the control spindle, the direction of flow of the oil, and therefore the direction of motion of the motor, may be reversed at will. It will thus be seen that the oil motor rotates at a speed directly proportional to the amount of oil it receives, its speed being varied and reversed at will. Likewise, when the pump is at full stroke, it is delivering a large amount of oil at moderate pressure, but when the stroke is reduced, the same power in the motor delivering a smaller amount of oil, will deliver it at a higher pressure, giving a greater effort at the motor, or a high initial starting torque.

The motor driving the pumps is a 6 cylinder engine, with cylinders 140 by 156 mm., designed to give 103 b.h.p. at 1,150 r.p.m. on gasoline and 85 b.h.p. on oil. This engine is situated across a front compartment of the car, and is operated from that end only, by the operator, who is situated directly in front of the engine. Directly connected to the engine shaft, is the variable stroke pump mentioned. In it, oil is the working fluid. This pump has a fixed outer cylindrical casing, and an internal rotating part carrying the radial cylinders

rear truck through an arrangement of packed valve in the centre pin connection of the truck to the underframe. The motors are situated front and rear of the truck, and connect with the truck axles through heavy chain gearing.

As the hydraulic fluid used is ordinary lubricating oil, the claim is made that all the working parts are thus perfectly lubricated, reducing wear to a minimum. There are no piston rings, packing or parts, requiring renewal, and any oil that may leak past the plungers of the pump or motors, is returned to the system by means of a small auxiliary pump. Safety valves are fitted on the pipe system, so that if any undue stress is thrown on the gear, the pressure is relieved automatically, and the risk of breakage obviated. There is also a by-pass for the oil, actuated automatically by means of an air cylinder when the air brakes are applied, thus preventing damage to the hydraulic motors. The engine is controlled automatically by the operation of the hand wheel, which actuates the pump, effecting the opening and closing of the pump throttle.

This car was supplied by McEwan, Pratt

intervention of the Attorney General or some other official. The majority of the Supreme Court judges concurred in dismissing the petition, with costs, Justices Idington and Anglin dissenting.

There is another somewhat similar case concerning the same bylaw pending in the Quebec courts, in which a ratepayer named Shepherd is plaintiff.

**Radial Railways and Their Entrance Into Toronto.**—A commission of three engineers appointed respectively by the Toronto City Council, the Toronto Harbor Commission and the Hydro Electric Power Commission of Ontario, to consider and report upon the radial railway system as far as it relates to entrances into Toronto, has completed its investigations, and it is said that its report will be submitted early in November. The commissioners are R. C. Harris, Works Commissioner, representing the City Council; E. L. Cousins, representing the Harbor Commission, and F. A. Gaby, representing the Hydro Electric Power Commission of Ontario. The expenses are stated to have been about \$30,000.

## Quebec Railway Light, Heat and Power Company's Annual Report.

The figures given in Canadian Railway and Marine World's last issue as for the year ended June 30 were taken from a press report. The annual report has since been distributed and the following particulars are taken from it:

The gross earnings from operation for the year were \$1,118,096.35 compared with \$1,122,144 in 1914. Adding miscellaneous income \$235,977.97, makes a total revenue from all sources of \$1,784,074.32. The operating and maintenance expenses were \$924,817.22, against \$913,101.60. The fixed charges and taxes of all kinds were \$79,182.05, leaving a net surplus of \$119,775.05, which, added to that of last year, leaves a total surplus to date of \$347,499.45. The properties and plants have been maintained in the same high state of efficiency as heretofore, as evidence of

## The Jitney Situation in Canada.

The jitney in Canada came and flourished extensively for some months, but except in one or two cities it has practically disappeared in the east, and even in those cities where it continues it is reported that the number of vehicles in use has considerably diminished. In North Toronto, which was a happy hunting ground for the jitney driver, it was reported, Oct. 18, that there were only about half the number in operation that there were three months ago. The putting in force consistently of the regulations made by the municipalities has had a considerable effect in reducing the number of jitney men, and the Hamilton authorities announced, Oct. 14, that any driver convicted of a violation of any of the provisions of the bylaws will have his license cancelled.

In the west, however, particularly in the Pacific Coast cities, the jitney men are reported to be holding their own pretty well.

penalty of not less than \$10 or more than \$100.

## The Toronto Railway Extension on North Yonge Street.

The Ontario Court of Appeal on Oct. 6, announced the reasons for dismissing the appeal of the City of Toronto against the Ontario Railway and Municipal Board's order directing the Toronto Ry. to extend its tracks on Yonge St. from its present terminus, northerly to Farnham Avenue, information respecting which has been given in previous issues. The Court holds that it is bound by a decision of a similar case which occurred on the expiry of the Toronto and York Radial Ry.'s franchise for its Mimico line on Queen St. west of Dufferin St., when Chief Justice Moss decided that the Toronto Ry. was entitled to operate over the portion of the line within the city limits of 1891, on the expiry of the old franchise granted by another municipality before the street in question was taken into the city. At the time of the Toronto Ry.'s agreement with the city in 1891, Queen St., west of Dufferin St., and Yonge St., north of the C.P.R. tracks, although within the city limits, were covered by lines operated under franchises to other lines than the Toronto Ry., and the portions of these streets so covered were excepted from the city streets over which running rights were given to the Toronto Ry. It was urged on behalf of the city that there was a distinction between the two cases, but the court could not maintain this.

The city has decided to appeal the case to the Judicial Committee of the Privy Council in England. In the meantime, in pursuance of the Ontario Railway and Municipal Board's order, the Toronto Ry. has complied with the necessary formalities before it can proceed to lay the track, and is only awaiting the approval of the plans by the City Engineer.

The Edmonton Municipal Railway has been placed under A. G. Harrison, one of the city commissioners, and J. H. Moir has been appointed Traffic Manager. Commissioner Harrison advises us that he has given Mr. Moir the full powers of a superintendent in order that there may be no misunderstanding with the men as to his authority in certain matters. Questions of general policy are, however, referred to a committee of the City Council in conjunction with the city commissioners as an advisory board in connection with municipal railway matters. We were further officially advised that a schedule was put into effect recently, utilizing the belt lines and giving a better service at about the same expenditure. The results are stated to show an improvement in receipts and an increase of 2,000 passengers per day. A proposition to the City Council to abandon the straight five cent fare and to restore the old rate of 6 tickets for 25c is, we are advised, being held in abeyance, as from the experience of other electric railways it does not appear that the increased revenue derived from a reduction in fares justifies such reduction.

**The Ontario West Shore Ry. Fiasco.**—Goderich, Ont., press dispatch, Oct. 15:—At a meeting today at Kintail of representatives of municipalities affected by the defunct Ontario West Shore Electric Railroad, it was decided to institute legal proceedings against the Toronto General Trusts Co. to recover \$218,000, which was shown to have been paid to J. W. Moyes, promoter of the road, the amount being, it is claimed, more than the progress certificates called for.

Quebec Railway, Light and Power Co.'s City Division.

The light line shows the passengers, including transfers; the heavy line shows the population.

which there was expended during the year on maintenance account, \$193,896.78.

Diagrams attached to the report show that the carloads of freight hauled on the Montmorency Division increased from between 2,000 and 2,500 in 1903-4 to nearly 8,500 in 1914-15. The passengers carried on the same division increased from between 800,000 and 900,000 in 1903-4 to between 1,700,000 and 1,800,000 in 1914-15. The passengers carried on the city division increased from 6,000,000 in 1903-4 to between 13,500,000 and 14,000,000 in 1914-15.

The accompanying diagram shows the passenger traffic on the city division for a term of years.

**Canadian Railway Club.**—E.S.M. Macnab, Engineer of Electric Car Lighting, C.P.R., read a paper on electric lighting of railway cars, at the Club's monthly meeting in Montreal, Oct. 12.

The New Westminster, B.C., bylaw makes the Chief of Police the chief examiner for the granting of licenses, and authorizes him to call in any dealer in automobiles to give advice on technical matters. In Victoria a bylaw regulating the traffic was adopted, but it has not been put in force as this is written, the Board of Examiners of cars and drivers not having been appointed.

New regulations of various kinds are being adopted in U.S. cities to further regulate the traffic. In San Diego, Cal., it has been found necessary to require jitneys to maintain the same terminals that street cars maintain, and to operate for 18 hours a day. The State of Wisconsin has passed a general law requiring that motor vehicles being operated for hire must furnish a reasonable and adequate service at just rates; must be labelled "common carrier," and that a bond must be provided, under a

## Electric Railway Projects, Construction, Betterments, Etc.

**British Columbia Electric Ry.**—F.R. Glover, General Executive Assistant, had a conference with the Mayor of New Westminster recently in connection with the laying of permanent tracks on Columbia St West, and on Sixth St. The city is pressing for the work to be done, but the company's present policy is against undertaking any new work. (Oct., pg. 404.)

**Hydro Electric Power Commission of Ontario.**—In reference to the statement made at the Ontario Municipal Association's annual meeting in Toronto, Sept. 2, by Chief Engineer Gaby, of the Commission, to the effect that reports would be ready shortly thereafter for presentation to the various municipalities interested, showing the estimated cost of the network of electric railways through the western portion of the Province, we are officially advised that it is the intention to have delegates from the various municipalities interested in these proposed lines assemble by districts in Toronto for the purpose of discussing the routes and estimates that have been prepared. The final lines on which the ratepayers will be asked to vote have not yet been fixed and until this has been done it is not likely that reports will be available for general distribution. However, it will be necessary to prepare descriptions of routes and give figures showing the assessment against each municipality for the various lines before the project can be voted upon. (Oct., pg. 404.)

**Hydro-Electric Power Commission of Ontario.**—In connection with the plans prepared by the commission for the building of a system of electric railways under municipal control, the municipalities interested were, on Sept. 29, requested to appoint representatives to meet the commission to discuss the matter. Chief Engineer Gaby advises that nothing as to the plans of the projected railways, or their probable cost, can be made public until after the representatives of the municipalities interested have considered them.

T.J. Hannigan, Secretary of the Ontario Hydro-Electric Railway Association of Ontario, is reported to have stated, Oct. 19, that the municipalities through which hydro-electric lines are surveyed will be called upon to approve of the routes, plans, etc., at the civic elections in January, and that the amount of passenger traffic, estimated on three miles from each side of the road, would be submitted, together with the freight prospects, etc., would be submitted at a series of group conferences which were to be held in Toronto commencing about Oct. 27, invitations to which were sent out some time ago. The western part of the Province has been grouped as follows for this purpose:

The municipalities from Toronto to Guelph; Guelph and Berlin to Stratford; Stratford to St. Marys and London; London to Sarnia via Arkona and Petrolia; Toronto to Collingwood; Niagara District, as far as Hamilton; Hamilton to Guelph and north to the Georgian Bay.

**London and Port Stanley Ry.**—The London Railway Commission decided, Sept. 28, to proceed immediately with the erection of car barns on the west side of the line south of Philip St., London, Ont.

We are officially advised that the erection of a car barn on the west side of the line south of Phillips St., London, is being proceeded with. Hyman and Son have the contract for \$27,000.

**Montreal and Southern Counties Ry.**—We are officially advised that satisfactory progress is being made with the construction of

the extension of the line from St. Cesaire to Granby, Que., 15 miles. A passenger station is being built at Abbotsford. Orders have been placed with the Canadian Westinghouse Co., and with the Northern Electric Co., for substation equipment. W.B. Powell, Montreal, is General Manager. (Sept., pg. 359.)

**Montreal Tramways Co.**—The Outremont, Que., City Council on Sept. 30 called upon the company to lay tracks from Mount Royal Ave., along St. Jean Baptiste, Rockland and Maplewood avenues in the spring of 1916. (Oct., pg. 404.)

**Oshawa Ry.**—We are officially advised that the company has under construction about half a mile of pavement betterment on Simcoe St., just north of Oshawa Junction, Ont. D.A. Valteau, Oshawa, Ont., is Superintendent. (Aug., pg. 318.)

**Peterborough Radial Ry.**—We are officially advised that the company is reconstructing the track on Charlotte, Park and George Streets, as permanent routes. W.G. Ferguson is Local Manager. (Oct., pg. 414.)

**Sherbrooke Ry., Light and Power Co.**—We are officially advised that the company is contemplating the building of a substation for power at Waterville, Que. J.H. Trimmingham is Superintendent. (April, 1913, pg. 186.)

**Toronto Civic Railway.**—We are officially advised that the city is replacing the temporary track on Bloor St., Dundas St. to Quebec Ave., 0.746 of a mile, double track, with a permanent paved track construction. It is proposed to lay track on Lansdowne Ave., from St. Clair Avenue to the C.P.R., in the near future. D.W. Harvey, Toronto, is Superintendent. (Aug., pg. 359.)

**Toronto Suburban Ry.**—Track has been laid on the extension from Lambton to Guelph, Ont., 46 miles, over the Humber River bridge, to the junction with the present line on Dundas St. at Lambton Park, and ballasting and other finishing up operations are in progress. Small gangs of men only are being employed. Work is in progress upon the substations at Georgetown and Guelph, and at the car barn at Lambton Park. It is expected to let contracts for the catenary line equipment in the near future. G.C. Royce, West Toronto, is General Manager.

The construction of the new car barn at Lambton is in the hands of the Suburban Construction Co. The material details for the catenary line are not yet settled, but it will probably be a steel messenger wire suspending a 4% copper trolley wire, American standard grooved.

**Sandwich, Windsor and Amherstburg Ry.**—The ratepayers of Walkerville, Ont., refused by a majority of nearly three to one, on Oct. 16, to grant an extension of the franchise of the Windsor and Tecumseh Electric Ry. a subsidiary of the S. W. and A. Ry., in return for the construction of a belt line to serve the factory and residential districts. The Town Council desired to have the mile and a half belt line built to suit local requirements, and asked the company under what conditions it would undertake to build it. The company offered to do the work if its franchise, which will expire in 1922, was extended until 1934. The company was not anxious to build the line, and there was no special effort made to have the bylaw carried. The deciding factor in the voting was the proposal under consideration by the Hydro Electric Power Commission of Ontario for building an extensive system of municipally owned lines.

Sir Adam Beck, Chairman of the Commission, addressed a public meeting upon the question, Oct. 15. (Oct., pg. 404.)

**Winnipeg Electric Ry.**—We are officially advised that the company is laying 750 ft. of double track line, on concrete base, on Webb St., Winnipeg, Man. Wilford Phillips is Manager. (July, pg. 277.)

## Flange Bearing Special Work on Montreal Tramway Co.'s Lines.

By W. F. Graves, Chief Engineer, Montreal Tramways Co.

Some years ago it was our practice to design the throatways of our frogs and crossings with a depth that was equivalent to normal depth of the flange, so that flange and tread wear were simultaneous. During the past two years we have experimented with the solid manganese work of a local manufacturer in decreasing the depth of throatway in the frogs and crossings by 1-16 in., on two different occasions making the total decrease on the last special work which we had  $\frac{1}{8}$  in. This permitted flange bearing across the intersecting gauge lines, the ramp in the floor being 18 in. long. This intersection was installed about a year ago and was built of solid manganese, and the tread wear has not shown on the head of the rail. This company uses entirely chilled cast iron wheels. There has been no undue chipping of wheel flanges that I can ascertain that is directly due to the shallow throatway. On a layout of hard centre work, where the ramp of the floor was short, we have built up the throatway in the adjacent rolled rail by means of an electric weld. This has worked out very well, but unfortunately, owing to the manner in which it is built up, it does not last very long. We have also tried this on drawbridge ends where grooved rail has been laid both on the bridge and on the abutment. This lasted about nine months before becoming tread ridden and tended to preserve the ends of the rails.

I question the policy of building up throatways in solid manganese or hard centre special work for the purpose of raising the floor, except where the steel work at the intersection of the gauge lines has signally failed, as the application of the intense heat necessary to make the addition to the throatway tends, without a doubt, to damage the manganese steel at a very vital point.

My judgment is that a flange bearing throatway is desirable. To what extent the throatway should be built up, I am not prepared to say, as on one of the suburban lines on which we handle freight cars with M.C.B. wheels, we installed a frog with a throatway  $\frac{1}{2}$  in. in depth. We were handling gondola class of cars of 100,000 lb. capacity, which belonged to a very large industry on this line, and after several months of service over this frog, the industry complained about the chipping of its flanges, and an examination by the division roadmaster and the superintendent of track indicated that this frog was the cause, although the ramp was very easy. The wheels on the gondola were all chilled iron. This would seem to indicate that there is a limit to which the throatway can be raised. I think this subject is worth a great deal of attention from electric railway track men.—Electric Railway Journal.

**Edmonton Radial Ry.**—We are officially advised that there is under way the reconstruction of 0.25 mile of permanent track on Jasper Ave., and the construction of 0.75 mile of track on Portage Ave. from Norwood Boulevard to 111th St. J. H. Moir is Superintendent. (Oct., pg. 404.)

## Mainly About Electric Railway People.

**W.H.Stapleton** is acting as Superintendent, Niagara, Welland and Lake Erie Ry., Welland, Ont., during the illness of the Superintendent, **F.J.Boyd**.

**George L.Guy** has been appointed Engineer of the Manitoba Public Utilities Commission, and will deal with matters pertaining to electric railways in the Province, as well as performing other duties.

**R.F.Hayward**, General Manager Western Canada Power Co., read a paper before the Canadian Society of Civil Engineers, at Montreal, Oct. 8, on the company's Stave Falls power development.

**Hon. David MacKeen**, who has been appointed Lieutenant-Governor of Nova Scotia, was for some years connected with the Caledonia Coal and Ry.Co., and is a director of the Halifax Electric Tramway Co.

**Lt.-Col.D.R.Street**, Secretary - Treasurer, Ottawa Light, Heat & Power Co. Ltd. and Moose Jaw Electric Ry., is in command of the 77th Battalion, Canadian Expeditionary Forces, which is training at Rockcliffe Camp, Ottawa.

**Patrick Dubee**, Secretary-Treasurer, Montreal Tramways Co., was reported, Oct. 16, to have practically recovered from the effects of injuries to his head and right leg, due to a fall from a street car at the beginning of the month.

The Ottawa Electric Ry. is represented in the Canadian Overseas Expeditionary Forces by one of its directors, **T.F.Ahearn**, by a clerk and an electrician, 17 conductors, and two motormen. The electrician, **F.G. Blewden**, was killed in action.

**Col.H.H.McLean**, K.C., M.P., for Queen's-Sunbury, N.B., and President of the St.John Ry., who has been in command of a brigade at Valcartier, Que., for the past few weeks was, according to a press dispatch, in Ottawa recently interviewing the Minister of Militia and asking that he be given a chance to get to the firing line. The dispatch adds that Col.McLean has done excellent work at Valcartier, and has high hopes of obtaining a command at the front.

In addition to the changes in the Chatham, Wallaceburg & Lake Erie Ry.'s organization mentioned in Canadian Railway and Marine World for October, **L.C.Fritch**, General Manager, Eastern Lines, Canadian Northern Ry., has been appointed General Manager in addition to his other duties. **L.W.Mitchell**, Toronto, Treasurer and Purchasing Agent, Canadian Northern Ry., and also heretofore Treasurer, C.W. & L.E.R. has also been appointed Purchasing Agent for the latter line.

**Capt.S.A.Dion**, younger son of A.A.Dion, President Moose Jaw Electric Ry., and brother of A. H. Dion, Superintendent of that company, joined the 23rd Regiment in Montreal, but while training at Shorncliffe was drafted into the 3rd Battalion and went to France where he was for some months. He was wounded in a charge at Festubert, May 24, by machine gun bullets, was in a hospital in England for three months and then started for home on the s.s.Hesperian, which was torpedoed. He lost everything he had with him, except the clothes he wore, and returned to London for a few days, then sailing on the s.s.Corsican, and reached home safely. His left arm is useless and probably will be for some months, but it is hoped he will ultimately regain the use of it. He has several months leave of absence.

**William Henry Nix**, who died at the Wellesley Hospital, Toronto, after a short illness, Oct. 14, was born in London, England, in 1840. He came to Canada about 30 years ago, prior to which he had spent some time

in a law office in England, where he acquired a knowledge of certain points of law, which was of considerable service to him during the last few years. He entered the old Toronto St. Ry. Co.'s service May 8, 1886, at the time of a strike of employees, as a driver of a one-horse car, and two years later was promoted to be timekeeper in charge of the one-horse cars, and remained in that position until the system was taken over by the City, about March, 1891. During the short time the railway was operated by the City, between March and September, 1891, the organization remained practically as it was. On Sept. 1, 1891, when the present company obtained possession, the old title of timekeeper was done away with, and on the electrification of the lines, he was appointed roadmaster, and eventually head-roadmaster, of all lines, which position he retained until his death. Latterly he was in charge of the disciplining of the employees, and was official examiner of conductors and motormen, and from 1894 to 1896 he acted as secretary of the company's claims committee. For some years past, in addition to his ordinary duties, he has looked after the company's claims against persons and firms in respect of damage to its cars and other property, and also of the enforcing of its bylaws against offending passengers, etc. He was well known amongst electric railway men throughout Canada, and some years ago was a regular attendant at electric railway meetings.

**Manitoba Public Utilities Commission.**—**H.A.Robson**, Commissioner of Public Utilities for Manitoba, whose resignation was foreshadowed in Canadian Railway and Marine World for October, has assumed his new position as General Counsel, Union Bank of Canada. We were advised Oct. 22, that no successor had then been appointed, but that the Commission's work was proceeding as heretofore, and that in the meantime Mr.Robson was available for voluntary consultation and advice. **A.W.Smith** continues as Secretary of the Commission, **Hugh McNair** continues to look after the gas utilities and general inspection and **Geo.L.Guy** has been appointed Electrical Engineer.

**Constitution of Freight Train Crews.**—In answer to a question addressed to the American Electric Railway Association's question box, asking what are the practices of member companies regarding freight train crews, and how many brakemen are carried, when train consists of package motor car and trailing load of not over 250 tons is hauled without caboose car, and when train consists of locomotive and from 200 to 500 ton train with caboose, and when train is over 500 tons with caboose, **G.Gordon Gale**, General Manager, Hull Electric Co., Hull, Que., writes that the train crew consists of motorman, conductor, trolley man and brakeman.

**Montreal and Southern Counties Ry.**—The annual meeting was held at Montreal, Sept. 30. The following directors were elected for the current year: **E.J.Chamberlin**, President; **Frank Scott**, Vice President and Treasurer; **J.A.Yates**, Secretary; **W.H.Ardley**, Comptroller; and **W.H.Biggan**. **J.E. Dalrymple** is Vice President in charge of traffic, and **W.B.Powell** is General Manager.

**The Toronto and York Radial Ry.'s Terminal Connection on Yonge St., Toronto.**—The appeal of the City of Toronto against the Ontario Railway and Municipal Board's order allowing the Toronto and York Radial Ry. to connect its tracks on Yonge St. with its new terminal station on Farnham Ave., came before the Appellate Division, Toronto, Sept. 29, judgment being reserved.

## Electric Railway Notes.

A new time table and schedule of rates was put in force on the London and Port Stanley Ry., Oct. 4.

The Toronto Street Railwaymen's Union announced recently that 270 of its members had enlisted for active service.

The Commissioner of Works for the City of Toronto has been authorized to buy a reciprocating track grinder for \$1,710 f.o.b., Philadelphia, Pa.

The Six Nations Council of Indians on the reserves near Brantford, Ont., Oct. 1, expressed themselves as being favorable to the building of an electric railway through the reserve.

The Toronto City Council invites tenders for 13 double truck cars, 47 ft. long, for the Toronto Civic Railways. Four single truck cars have been received from the Preston Car and Coach Co.

According to press reports a project is under consideration for the erection of a joint terminal station in Brantford, Ont., for the Brantford and Hamilton Ry., and the Lake Erie and Northern Ry., the latter of which is now being electrified.

The Brantford City Council, passed a resolution, Oct. 12, directing the preparation of a bylaw for providing for the election in Jan., 1916, of three commissioners for the management of the Brantford St. Ry., and the Grand Valley Ry.

The cost of the investigation made by the Manitoba Public Utilities Commission in 1914, into the electrolysis of water mains, etc., in Winnipeg, amounting to \$7,671.50, was ordered to be paid by the Winnipeg Electric Ry. by Oct. 31.

Calgary Municipal Ry. employees have contributed \$800 towards the purchase of a machine gun for the 56th Battalion. The amount was collected and dealt with by the Calgary Municipal Railway Social Insurance and Sick Benefit Association.

The Regina, Sask., City Council is considering the rearrangement of the car schedule for the Sunday service. Owing to the heavy loss on the service it was proposed to abolish it, but upon representations made it was decided to cut down the service to the minimum.

**Wilford Phillips**, Manager, Winnipeg Electric Ry., is quoted as saying, Oct. 7, that as soon as the town of Stonewall, Man., was ready to approach the company with an agreement for the running of Sunday cars within its area the company was ready to put on a service.

A decision was given in a Quebec court, Oct. 14, refusing to allow Controller Hebert to inscribe an appeal against Justice MacLennan's decision throwing out his motion for particulars in the action of St. Martin against Hebert, respecting the litigation arising out of the Board of Control-Montreal Tramways Co. situation.

The Toronto Board of Control discussed, at the end of October, the question of taking over the operation of the Mimico and Scarboro Divisions of the Toronto and York Radial Ry., as part of the civic railway. These sections are already owned by the city, and operated by the T. & Y.R.R. for public convenience.

The new Sunday car schedule on the Regina, Sask., Municipal Ry. was put in operation Oct. 17. The cars run on a 15 minute headway between 10 a.m. and 10 p.m. It is hoped that by thus cutting off 3½ hours of service it will be possible to do away with the average loss of \$45 a Sunday resulting hitherto.

The British Columbia Electric Ry. em-

ployes have been organized for first aid instruction during the coming winter. W. G. Murrin, General Superintendent, has offered a trophy or individual medals for teams of five men which show superiority at a practical demonstration of first aid work at the close of the session. Five teams have already been entered.

The British Columbia Electric Ry. carries on a technical school during the winter months for the benefit of its employes. The school was established in Jan. 1904. The school in Vancouver opened its 12th season, Oct. 6, under the charge of J.G. Lister, and G. Porter, the company's Chief Electrical Engineer, has offered prizes for the best sets of notes of the lectures for the current season.

The advisory committee appointed by the Edmonton, Alberta, City Council to investigate matters connected with the Edmonton Radial Ry., decided, Oct. 18, to recommend that an independent commission be appointed for its management. The report of the citizens' special committee, together with the recommendations of the Council's advisory committee thereon, is under consideration by the Council.

The City Treasurer reported to the Montreal City Council, Oct. 13, that the Montreal Tramways Co. had failed to pay a balance of \$20,000 alleged to be due for snow cleaning last winter, and that it had also failed to file with the city, in accordance with bylaw 210, a statement showing its gross receipts for the year ended Sept. 1, upon which is based the percentage it is obliged to pay to the city.

One of the cars of the Quebec Ry., Light and Power Co., ran on to the Victoria Park bridge, Quebec, Oct. 1, while the swing span of the bridge was partly open. The car fell over, but was held in a vertical position, caught fast between the pier and the end of the bridge. The passengers, together with the motorman and conductor, escaped with but slight bruises, a rather remarkable and providential escape.

The Hamilton, Grimsby and Beamsville Electric Ry.'s appeal against the Ontario Railway and Municipal Board's order directing the company to provide sanitary conveniences upon its cars, and at Grimsby station, and to file plans for the same has been heard at Osgoode Hall, Toronto. The company contends that the Board has no power to make the order, inasmuch as the H.G. and B.E. Ry. connects with Dominion chartered railways, and it further denies the necessity for such conveniences, which it says will be objected to by passengers and others. The court reserved judgment.

The City of Edmonton, Alberta, is agitated over a proposition by the Wabamun Power and Coal Co., to finance a company with the title of the Edmonton Power Co., to supply electric energy in the city. The company promises to give much cheaper rates than are now being charged by the city power plant, and claims if its project is taken up, that the Edmonton Radial Ry. will be able to save considerably upon its power. The City Solicitor, Sept. 28, advised the Council that it could not enter into any agreement with the company. The Council, however, is in favor of preparing a bylaw, and submitting it to the ratepayers, and then, if it is approved, going to the Legislature for the necessary powers. If the proposition is adopted it will practically mean the abandonment of the existing city power plant.

**Brantford Municipal Ry.**—The earnings of the street railway in Brantford, Ont., for three weeks ended Oct. 16, were \$2,841.98 against \$1,655.42 for same period 1914.

## Attempts to Reduce the St. Thomas Municipal Railway Deficits.

St. Thomas, Ont., press dispatch, Oct. 1: "As a drop in the big bucket of deficits in the management of the municipal railway the committee has decided to cut off the service of all the station cars. The Manager reported that the revenue from the station cars during September was \$69.53 and the wages of the men \$154.98, leaving a deficit of \$85.45, or over \$1,000 annually, for this service alone. This will mean the dismissal of a car crew, but two of the men will be given employment in the department. This deficit does not include the cost of power or wear and tear of the equipment. The hours of two extra belt cars were also cut down 4½ hours each day, making a saving of \$83.16 a month; and to popularize the service the committee ordered the sale of 8 and 10 tickets for 25c. Chairman Webster, to save the city a further annual shortage of \$18,000, which is coming at the end of the year, would abolish the system altogether."

## Electric Railway Finance, Meetings, Etc.

**British Columbia Electric Ry., and allied companies:**

	Aug. 1915	Aug. 1914	July 1 to Aug. 31, 1915	July 1 to Aug. 31, 1914
Gross earnings	\$305,426	\$274,812	\$1,017,849	\$1,064,835
Expenses	487,392	512,174	971,273	1,039,178
Net Earnings	19,734	162,638	46,576	325,657

The percentages paid to the City of Vancouver for the first nine months of the current year are \$28,224.36 less than for the same period last year. The amount paid for September was \$3,140.75, against \$7,003.31 for Sept., 1914. The passengers carried on the Vancouver city and suburban lines in September was 2,139,217, against 2,951,980 for Sept., 1914. The passengers carried for the nine months of the current year shows a decrease of about 11,000,000 from the same period of 1914.

### Cape Breton Electric Co.—

	Aug. 1915	Aug. 1914	July 1 to Aug. 31, 1915	July 1 to Aug. 31, 1914
Gross earnings	\$33,225.71	\$32,742.16	\$64,545.51	\$64,208.66
Expenses	18,159.39	17,484.69	35,825.68	37,150.26
Net earnings	15,066.32	15,257.47	28,719.83	27,058.40

**Detroit United Ry.**—The ratepayers of Detroit, Mich., will vote Nov. 2 upon the City Street Railway Commission's plan for acquiring the D.U.Ry.'s city lines. A three-fifths majority is required.

**Edmonton Radial Ry.**—From a statement of the finances for the half year ended June 30, prepared by city officials for the Edmonton, Alberta, Property Owners' Association, it appears that the total deficit on the E.R.R. is \$706,677.59. A note to the table states that "the various deficits are being carried on open account in the entral books."

**Lethbridge Municipal Ry.**—Earnings for September, \$2,859.45; passengers carried, 57,165.

**Levis County Ry.**—The annual general meeting of shareholders was held at Levis, Que., Oct. 20, when the report for the year showed that considering the general decrease in business, the cost of renewing all the overhead lines and the ordinary expenses of maintenance, there was a satisfactory surplus. The directors for the current year are:—S.H. Ewing, President; Hon. R. Turner, Vice President; E.A. MacNutt, Secretary-Treasurer; John Forman, J. Blouin and Col. G.E. Allen-Jones. A.K. MacCarthy is Manager, and J.W. Brown, Assistant Secretary-Treasurer.

### London St. Ry.—

	Sept. 1915	Sept. 1914	Jan. 1 to Sept. 30, 1915	Jan. 1 to Sept. 30, 1914
Gross earnings	\$38,791.55	\$33,736.90	\$206,120.72	\$282,785.37
Expenses	15,538.68	11,899.58	90,742.54	83,177.31
Net earnings				

**Regina Municipal Ry.**—The revised estimates of the Regina, Sask., City Council for the coming financial year include the following items respecting the Municipal Railway: Cash loss to Dec. 31, 1914, \$16,312.92; estimated loss, 1915, \$123,295.96; total \$139,608.88. The surplus from other public utilities is estimated at \$34,483.31, leaving \$105,125.57 to be provided for. It is proposed to provide \$50,000 of this deficit from general taxation, and the balance out of property sales.

**Toronto Ry., Toronto and York Radial Ry., and allied companies:**

	Aug. 1915	Aug. 1914	Jan. 1 to Aug. 31, 1915	Jan. 1 to Aug. 31, 1914
Gross earnings	\$702,927	\$830,632	\$6,414,705	\$6,742,786
Expenses	365,093	432,906	3,280,047	3,447,359
Net earnings	397,534	417,733	3,065,656	3,265,427

**Toronto Ry.**—The receipts from Jan. 1, and the percentages paid to the city, for 1915, compared with those for 1914, are as follows:

	1915	City percentage	1914	City percentage
January.....	\$471,226	\$70.486	\$501,844	\$75.277
February....	440,324	67.047	461,274	72.060
March.....	488,468	94.141	530,751	102.159
April.....	467,702	93.540	501,435	100.287
May.....	468,953	93.790	534,465	106.893
June.....	450,582	90.116	525,033	105.106
July.....	449,086	88.821	495,882	103.772
August.....	447,968	89.953	507,912	101.582
September...	489,573	39.166	525,255	42.021
	\$4,173,872	\$725.700	\$4,583,851	\$809.148

### Winnipeg Electric Ry.:

	Aug. 1915	Aug. 1914	July 1 to Aug. 31, 1915	July 1 to Aug. 31, 1914
Gross earnings	\$251,189	\$322,762	\$2,251,467	\$2,760,944
Expenses	182,512	187,595	1,481,593	1,595,653
Net earnings	68,677	135,167	769,874	1,165,291

**Calgary Municipal Railway Bylaw.**—A new bylaw for the control of the Calgary Municipal Ry. is under consideration. It defines clearly the differences between questions of executive management and questions of policy. All matters of policy must be passed upon by the commissioners as a whole, and by the City Council in accordance with the provisions of the charter of incorporation. The duties and responsibilities of Superintendent T. H. McCauley are also defined, and A. G. Graves, one of the commissioners, is given wide powers, which practically puts him in control of the executive management. Superintendent McCauley has the right to employ men and to suspend employes for cause, but before anyone can be discharged Commissioner Graves must approve. All rules and regulations governing the working of the lines must be submitted to Mr. Graves for approval before being put in operation, and no bulletins governing the employment of men are to be posted by the Superintendent without Mr. Graves' approval. The bylaw also provides that there must be no discrimination against any employe who desires to join a trades union.

**The Toronto Ry. and the Outside Running Board on Summer Cars.**—The Ontario Railway and Municipal Board concluded a series of hearings, Oct. 1, respecting the proposed elimination of the outside running board from the Toronto Ry.'s summer cars. Several suggestions had, at various times been received, details of which were given in Canadian Railway and Marine World for September, together with some particulars of a type of car which the Board considered had better be adopted. This car has a total seating capacity of 42 persons, and has a longitudinal seat on the inner side of the car and cross seats on the other side. After considerable discussion, the Board decided that the company must build and have in operation 25 of these cars by Dec. 1. The experimental car which was arranged along these lines, is being altered to conform to the views of the Board's Consulting Engineer, J.C. Royce, after which a plan will be prepared and submitted to the Board for formal approval.

## Hydro Electric Power Commission of Ontario's Report on Electric Railways

Following are extracts from the report for the year ended Oct. 31, 1914, issued recently.

**London & Port Stanley Ry.**—Preliminary plans for two substations, for the electrical equipment of the London and Port Stanley Electric Ry., which are to be located at the Horton St. substation of the London Water and Light Commission, and in an extension to the Commission's high-tension transformer station at St. Thomas were prepared and specifications issued covering the purchase for each station of two 500-kw., 1,500-volt d.c. 25-cvle rotary converters with the necessary transformers and 13,200-volt a.c. and 1,500-volt d.c. switchboard equipment. Tenders were received for this apparatus, and the contract for the rotary converters, the necessary transformers, and the switching equipment for the two substations was placed with the Canadian Westinghouse Co. Provision is made in the design of the stations for addition, rotary converters, and feeders in order to take care of further developments in the railway's business. The Horton St. station in London is already constructed and plans and specifications are being prepared for the necessary extension to the Commission's transformer station at St. Thomas. The equipment will be installed by the Commission under the supervision of the contractor's engineer.

**London St. Ry.**—For the purpose of supplying direct current power to this railway the London Board of Water and Light Commissioners called for tenders on two 500-kw., 600-volt rotary converters with two banks of 13,200-volt, 25-cvle transformers and the necessary direct-current and alternating-current switching equipment. These tenders were referred to the Commission for their recommendation, and after checking them carefully the Commission recommended that the contract be awarded to the Canadian General Electric Co. The contract was prepared and the apparatus inspected during the process of manufacture by the Commission. The rotary converters, transformers and the switching equipment were installed in the extension to the Horton St. substation by the local staff.

**Brantford Municipal Ry.**—The City of Brantford having taken over the lines and equipment of the Grand Valley Ry., and the contract for its power being about to expire, negotiations were entered into to obtain this load for the local hydro-electric department. A study was made of the load conditions of the railway, and of the cost of giving the required service. It was apparent that it would be advantageous to shut down a steam plant supplying power to this road near Paris, and to purchase power from Paris at this point. An agreement has been drawn up and submitted, covering the delivery of this power. There is every possibility of this railway also taking power from Brantford on the expiration of the present agreement.

**Electric Railway Projects.**—The work carried on by the electric railway department during the past year may be summarized as follows:—Advice to municipalities, routes, etc., of proposed lines. Reconnaissance and rough reports on various lines. Preliminary surveys of desired routes. Preparation of plans and profiles of preliminary surveys and projection and taking out of quantities on lines along such surveys. Estimates of cost of construction and equipment of proposed lines. Collection of traffic data from the various districts showing the amount and distribution

of business both inbound and outbound. Estimates of the annual revenue and expenses that might be expected from the construction and operation of various lines. Reports and advice to municipal committees and representatives as to the most profitable routes of those surveyed through various districts. Assistance to municipalities in the preparing of bylaws and presentation of such to the ratepayers for ratification. Preparation of standard estimating costs of each portion of the work entering into the construction of the complete line. Preparation of standard rules and specifications with drawings covering the forms of construction proposed for these lines. Preparation of specifications and plans covering standard materials such as rails, concrete pipe, etc., required for roadbed construction. Selection of a system of electrification. Compiling statistics of traffic, revenue and expenses of existing railways for the purpose of comparison with proposed lines. Preparation of specifications for electrical equipment for substations, cars and locomotives. To carry on the above work in all its details required a very careful and complete study of plans, costs and operating statistics of existing railways now in operation in Canada, United States and Europe.

To date, resolutions have been received from 138 townships, 38 villages, 42 towns, 11 cities, 4 police villages, and 7 miscellaneous committees, such as boards of trade, etc., asking for surveys, reports and estimates on proposed lines. Two survey parties have been at work for almost the entire year making preliminary surveys of some 1,200 miles of line. The information so obtained has been plotted and used for the purpose of preparing estimates on the cost of roadbed construction. In making the surveys topography was taken for approximately 400 ft. on each side of the traverse line. When this information was plotted the proposed lines were then projected and quantities figured along such lines.

Traffic men have been sent into the various districts for the purpose of collecting information showing the amount of freight and passenger business that is obtained by the present railways in the district, and whose duties are to estimate on the business that may be done by the proposed lines. Full information is now being taken by these men, showing not only the amount of business, but the revenue that is derived therefrom and the destination or shipping point of freight business; thus the information may be used for other lines that may be proposed in the future without requiring the traffic men to return to the district.

The most important work done during the year was in the Toronto-Northeastern district. Meetings with the representatives of the municipalities in this district were attended during the year, and it was decided by the representatives during the summer that the councils of the municipalities should pass bylaws to cover the construction, equipment and operation of the line, and that these bylaws should then be placed before the people on Oct. 19 for ratification. Agreements between the Commission and the municipalities covering construction and operation of the line were prepared and a number of meetings were held in all centres throughout the district, for the purpose of explaining the proposition to the ratepayers. Representatives of the Commission were present at practically all of these meetings to assist in giving this in-

formation, and the result of the voting on Oct. 19 showed that the municipalities as a whole were very anxious for the construction of the line along the route recommended by the Commission. Eleven out of the 13 municipalities that voted on that date passed their bylaws by very substantial majorities.

**Judgment re Sandwich, Windsor, and Amherstburg Ry.**—In the Appellate Division of the Ontario High Court of Judicature at Toronto, Oct. 16, judgment was given on the City of Windsor's appeal from an order of the Ontario Railway and Municipal Board of April 20, 1915. The Sandwich, Windsor, and Amherstburg Ry. applied under sec. 250 of the Ontario Railway Act for an order approving the construction of applicant's railway along Ferry St., Chatham St., and Victoria Ave., Windsor; and also for an order approving the construction of a double track railway along London St., Windsor. At the hearing the board made an order approving of the application. Appeal argued and order of board varied by making it without prejudice to the right of the appellant to contest the right of the company to construct the lines that are in question and the validity of the by-law. If an action is brought within three months, costs of the appeal to be costs in the cause of that action. If no action brought, appellants are to pay the costs of the appeal.

**System of Paying Toronto Civic Railway Employees' Wages.**—The Toronto City Works Commissioner was instructed recently to report to the Works Committee regarding the method of paying the civic railway employees. Formerly the City Treasurer handed the wages to the Works Department, and they were delivered to the individuals, but the Treasurer objected to the Department acting as a paymaster, and instituted a system of paying the men while on duty, which did not work satisfactorily. He then placed cash in certain banks, and the men were required to call there when off duty for their pay. The Treasurer objects to reverting to the first system, and suggests that he send a cheque for the full amount required, to the Works Commissioner, who will be responsible for the payments to the men. The Works Commissioner states that he is not prepared to assume the function of the Treasurer in this regard.

**Toronto Ry. and Overcrowding.**—The appeal of the Toronto Ry. against a conviction made in 1911, for permitting overcrowding on its cars, was dismissed by the First Divisional Court, Toronto, Oct. 13, and the conviction confirmed. In the course of the appeal the jurisdiction of the Courts to deal with the matter was questioned, it being claimed that the Ontario Railway and Municipal Board was in duty bound to do so, but it was ruled that that might apply between the company and private persons, but not between the Crown and the company.

**The Canadian Bridge Co.** has been incorporated under the Dominion Companies' Act, with an authorised capital of \$2,000,000, and office at Walkerville, Ont., to take over the assets and business of the Canadian Bridge Co. there, at present carried on under Ontario laws, to pay for the same in shares of the new company, and to assume the outstanding liabilities, contracts, orders and obligations of the Ontario company. The provisional directors are:—F.C. McMath, W. Pope, G.E. Roehm, C.M. Gooderich, engineers, Detroit, Mich.; A.L. Colby, engineer, and C. T. Miller, Secretary, Walkerville, Ont.

**Guelph Radial Ry.**—The company is repairing the permanent roadway on Wyndham St., and Elora Road, Guelph, Ont., about 3,000 ft. A.H. Foster is Manager. (Feb., pg. 70.)

## Transfer of C.P.R. Ocean Steamship Interests to the Canadian Pacific Ocean Steamships, Limited.

At the C.P.R.Co.'s annual meeting in Montreal, Oct. 6, the following resolution was adopted:—Whereas the company is the owner of 57,637 fully paid shares of the par value of £10 each of the Allan Line Steamship Co., Ltd., and is also the owner of the several steamships engaged in Trans-Atlantic and Trans-Pacific service, a list whereof, with their respective ports of registry, is attached hereto marked schedule A.

[The vessels named in the list are: Empress of Britain, Missanabie, Metagama, Lake Manitoba, Mount Temple, Lake Michigan, Montreal, Montfort, Monmouth, Milwaukee, Medora, Empress of Russia, Empress of Asia, Empress of Japan, Monteagle, Melita, Minnedosa.]

And whereas the company is desirous that its said steamers and those of the Allan Line, of which it has control through its holdings of the said shares in the Allan Line, shall be operated under the management and control of a separate company, and it has accordingly procured the formation of a steamship company under the name The Canadian Pacific Ocean Services, Ltd., incorporated under the Companies Acts, 1908 and 1913, of the United Kingdom, with a capital of £2,000,000 divided into 200,000 shares of £10 each, and having its registered office at 8 Waterloo Place, in the County of London (hereinafter called "the Steamship Company"), inter alia for the purpose of acquiring and operating the said steamships and acquiring the said shares; and whereas, the company is by statute empowered to sell its steam or other vessels engaged in ocean service to the steamship company upon such terms and for such consideration as may be determined by the boards of directors of the steamship company and this company, and is further empowered to guarantee payment of the principal and interest of and acquire and hold stock, bonds, debentures, debenture stock, or other securities of the steamship company; therefore be it resolved that the company do sell to the steamship company the said 57,637 fully paid shares of the Allan Line Steamship Co., Ltd., do transfer to the steamship company the several steamships named in the schedule attached, and the good will pertaining thereto, together with their several boats, machinery, gear, tackle, apparel, furniture and other equipment, including all stores and bunker coal, and do contemporaneously with the transfer of the shares of the Allan Line, execute in favor of the steamship company absolute bills of sale of the said steamships in the form required by the Merchant Shipping Acts, 1894 to 1914, the consideration for the sale of the said shares of the Allan Line Steamship Co., Ltd., being £576,370, which shall be paid and satisfied by the allotment and issue to this company of 57,637 shares of the steamship company, fully paid up and non assessable, and the consideration for the transfer of the said steamships and good-will pertaining thereto, being the payment by the steamship company to this company of £4,252,400, which shall be paid and satisfied by the allotment and issue to this company of 138,654 shares of the steamship company, allotted and issued as fully paid up and non assessable, and by the delivery to this company of first de-

bentures or debenture stock of the steamship company, bearing interest at the rate of 5% per annum, to the amount of £2,865,860, which, together with such first debentures or debenture stock as may be issued by the steamship company ranking pari passu therewith, shall be secured as a first floating charge upon the whole of the undertaking, property and assets of the steamship company, present and future, the deed securing such first debentures or debenture stock to contain all usual and appropriate provisions for the protection of the holders of the said first debentures or debenture stock secured thereby and to be approved of by the company's counsel.

Be it further resolved—That the agreement between the company and the Canadian Pacific Ocean Services, Ltd., dated Aug. 9, 1915, now submitted to this meeting, be, and the same is hereby approved, and the execution thereof by the President and Secretary of the company be, and the same is hereby ratified and confirmed, the said agreement to be effective from Nov. 1 next, or from such later date as the directors may determine, and be it further resolved, that pursuant to the statutory authority in that behalf, this company do guarantee payment of the principal and interest of such bonds, debentures, debenture stock or other securities of the steamship company as may be from time to time issued by the steamship company, with the consent of this company in writing under its corporate seal.

## Unsatisfactory Work on Toronto Harbor Contracts.

The Minister of Public Works, when interviewed at Toronto, Oct. 21, respecting complaints as to the work on certain contracts in connection with the Toronto harbor improvements, is reported to have stated that the contractors had not fulfilled their obligations. Certain defects were discovered and the contractors admitted that such a condition was due to lack of proper inspection. They subsequently brought forward a plan for remedying the defective work, and to satisfy the Government along certain lines, two of the subcontractors agreed to experiment on two stretches of 100 ft. each. This experimental work, when completed, was condemned by the Government and Harbor Commission's engineers, whereupon the contractors agreed to act in accordance with the original plans. He had, in company with the engineers representing the Government and the Harbor Commissioners, inspected the faulty work, and had made it known to the contractors and subcontractors that if they were not prepared to comply with the stipulated conditions, their deposits would be estreated and utilized by the Government for remedying defects. The contractors have been asked to continue the work until forced to shut down by weather conditions, and if there is any branch of the work which can be continued throughout the winter, it will be proceeded with.

The work in the harbor was shut down in July, and certain difficulties were experienced in connection with the work of one of the subcontracting firms, which attempted to remove its plant, when called upon by the general contractors to make defects good. The Canadian Stewart Co., the general contractors, admit responsibility for the work of subcontractors, and state that any defects will be made good, and the original plans adhered to.

## Submarine Chasers Being Built in Canada.

"The Canadian Vickers Co., of Montreal, is said to have an order to build 300 submarine chasers for Great Britain. It is further reported that 25 have been delivered and have played an important part in the destruction of German submarines, and that eight of the small craft crossed the Atlantic Ocean under their own power. The submarine chasers, which are proving an increasingly important factor in minimizing the potentiality of Germany's submarine campaign, are 75 ft. long and have a surface speed of 20 knots and a submerged speed of 15. They draw 14 ft. of water. They carry no torpedoes but are armed fore and aft with two 3-in. guns. The chasers are designed to co-operate with aeroplanes in sighting submarines. Once a submarine is sighting the chaser speeds so swiftly to the attack and describes circles with such rapidity that the larger submersible is placed at a distinct disadvantage in retaliating. Whether the chaser succeeds in damaging the submarine or not it has little difficulty in escaping because of its higher speed, its superior control and the relatively small surface of exposure it presents to a torpedo. All the steel for a big chaser contract is the product of the Bethlehem Steel Co., the Crucible Steel Co. and the Canada Steel Co. of Hamilton, Ont. The engines are of a Diesel type, closely corresponding to those the Electric Boat Co. of New London, Conn., built for the 10 submarines that crossed the Atlantic in July and August. Like the larger craft, the chasers are equipped with both heavy oil engines and electric motors."

The foregoing is reproduced from Shipping Illustrated, New York. We have abstained from referring to the matter hitherto, in deference to the Canadian press censorship regulations, but now that it has been dealt with in a United States paper it has been passed by the Chief Press Censor for Canada for publication here.

## The Grand Trunk Pacific Railway Dry Dock at Prince Rupert, B.C.

A number of official tests of the dry dock at Prince Rupert, B.C., which was completed recently, were made during the early part of October, in the presence of Dominion Government engineers, the designer and the contractors.

The dock is built in three sections, and has a total length of 604 ft. 4 ins. on the keel blocks. It is capable of taking the largest vessels at present operating on the Pacific Ocean, and to enable it to handle smaller vessels economically, it is built in three sections. One section consists of 6 pontoons, and is 269 ft. overall, and there are two sections of 3 pontoons each, 164 ft. long.

During the tests the three sections were joined, and the whole dock sunk to 26 ft. below the keel blocks, giving a total depth of 30 ft. from the pontoons to the surface. This was accomplished without any hitch, and 45 mins. after the starting of the pumps the dock was brought to its normal position.

The first vessel to use the dock was the s.s. Delhi, which was wrecked on the Alaska coast about a year ago, and towed to Prince

fluvium and docked during September for examination.

A full description of the dock and other structures connected therewith, with details and plans, was given in Canadian Railway and Marine World for Feb., 1912.

### Regulations for Trans-Atlantic Shippers.

The British Government has recently issued a few recommendations to shippers by Atlantic steamships, with a view to minimizing risk of delay when vessels are boarded for search whilst en route.

Shipments to neutral European, or Russian ports in the Baltic: In the case of goods shipped by a vessel which is to call at a neutral European port, it is recommended that bills of lading should never be made out "to order," but that they should be made out either to a named consignee, or to a bank or financial house of high standing with the remark "notify —", giving the name of the person or firm for whom the goods are ultimately designed. Goods shipped to Holland should be consigned to the Netherlands Overseas Trust.

Shipments to British, French or Italian ports, or to Russian ports not in the Baltic:—It is not necessary that goods shipped to a British, French or Italian port or to a Russian port not in the Baltic, should be consigned as above described, provided that it is clearly indicated in the bill of lading and in the manifest that the ultimate destination is as stated, and provided that the vessel is not to call at a neutral European port on her voyage.

Shipments to neutral ports outside Europe:—It is desirable in cases where the use of another form of consignment might lead to an interruption of the voyage, that goods shipped to neutral countries outside Europe should be consigned in the same manner as those shipped to neutral countries in Europe, but when this course is not adopted, it should be clearly indicated in the bill of lading that the destination of the goods is outside Europe, and is not in Asiatic Turkey, nor adjacent to that enemy possession.

In all cases it is essential that the bill of lading or a certified copy of it should be on board the vessel.

### Canada Steamship Lines' Prospects.

J.W.Norcross, Vice President and Managing Director Canada Steamship Lines, Ltd., is reported to have stated at Montreal, Oct. 16, that the rates prevailing for the transportation of grain on the Great Lakes and the Atlantic will have a favorable influence on the company's earnings this year. The present rates from the head of the lakes to Buffalo, Port Colborne and Montreal are considerably in excess of the normal rates at this time of year, ranging from 5½¢ to 5¾¢ to Buffalo, and 5½¢ to Georgian Bay ports. The dispatch received by vessels loading and unloading has been very good, and elevators have a large amount of space for the reception of grain, as up to the present the bulk of the grain had been moved via Buffalo, from whence it has been rushed by rail to the seaboard.

He announced that arrangements have been made for the chartering of 17 of the company's vessels for the entire winter.

The Quebec Steamship Co., a subsidiary of Canada Steamship Lines, Ltd., operating entirely on the Atlantic, has benefited by the extraordinary conditions existing in shipping generally, and its earnings are said to have been far in excess of those for any previous year.

## The Sir Hugh Allan-De Levis Collision.

An investigation into the causes which led to a collision between the Montreal Harbor Commissioners' tug, Sir Hugh Allan, and the Dominion Government s.s. De Levis, at Point Citrouille in the St. Lawrence River, Aug. 21, was held at Montreal, Sept. 30, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and J.O.Grey, as nautical assessors.

R. Chevrier, master of the Sir Hugh Allan, stated that he holds a master's certificate for a passenger steamer in the minor inland waters. He left Montreal, Aug. 20, at 8.30 p.m., for Three Rivers and Quebec, having on board as passengers the Minister of Public Works, the Secretary of State, and two others. The night was clear and the usual courses were followed until when off Champlain, or a little lower down he noticed the green light of a vessel westward bound, on his port side, which crossed over to his starboard, and upon seeing this he starboarded his helm in order to have more room to pass; the green light and the Champlain lights were nearly in one. We noticed suddenly that the green light disappeared and the red light of the oncoming vessel was shown, and he therefore hard a starboarded his helm. His vessel was going at about 12 knots, and he subsequently ordered full speed astern; but the collision happened within a few seconds of this order. He noticed some of the crew of the De Levis on his vessel, but was not sure who they were. The vessels parted from each other, and he ordered the starboard engine ahead, but failed to keep close to the De Levis, as she was circling around, her engines going ahead. In the meantime the order to lower the boats was given, which was executed in fairly good time, and men who were seen struggling in the water were picked up, and the rescue of the remainder of the crew and passengers was effected without loss of life. Meanwhile the De Levis had stranded on the south shore. He was on duty from the time the vessel left Montreal until after the collision, which occurred at 3 a.m., Aug. 21. The Sir Hugh Allan is a twin screw, steel ship, of 10.37 tons net and 354.23 tons gross, with triple expansion engines. She carried a crew of 21 all told.

J. B. Blais, master of the De Levis, stated that his vessel was wooden built, with twin screws, having a crew of 19, and that she carried two boats, one small and one medium size—the latter capable of carrying 18 persons—and some 50 life belts. He left Batiscan carrying the crew of some of the government dredges, and had 78 persons on board, including the crew, at the time of the collision. Before rounding Point Citrouille he kept constantly passing well to the northward of the channel, some 300 ft. north of the gas buoy, when in order to get the Champlain lights he had to haul more to his right, exhibiting his red light to oncoming vessels, two of which he saw, the first being the Sir Hugh Allan. Upon seeing the Sir Hugh Allan he ported and the collision happened shortly after, but not before the order to stop was given. He then came out of the pilot house and gave the order to lower the boats and see to the passengers. He fell on to the deck of the Sir Hugh Allan through a broken rail, caused by the collision, and in falling hurt his back. There was no lookout, no officer other than himself being on duty, and three of the passengers were in the wheel house with him. He admitted that his vessel was going ahead after the collision, and made one and a half circles before she stranded, and stated that he had tried to steady his helm, but found it would not answer. He

has been in command for eight years, and holds a certificate as master of a steam tug in minor inland waters, and never had an accident before.

The mate of the Sir Hugh Allan, E. Carpentier, produced his certificate as mate of a passenger steamer in minor inland waters. He stated that he was engaged as mate, not as pilot, and corroborated the master's evidence, but added that he had no sleep since 6 o'clock of the morning before that on which the accident happened. Shortly before 3 o'clock he took the wheel from the wheelman, the latter remaining in the wheelhouse; he noticed the green light of a small vessel on his port bow, crossing over to starboard, and thought it was a tug going toward a dredge which was anchored in the vicinity, but upon seeing the red light he knew his surmise was not correct, and operated the wheel according to the instructions he was receiving from the master.

The second engineer of the De Levis, Leon Crepeau, stated that he was on duty at the time, the first engineer being in his room; that the moment the impact occurred he immediately left his engine room and jumped on to the deck of the Sir Hugh Allan, without stopping his engines, which were going full speed ahead at the time of the collision, and after. He swore that he saw Capt. Blais, the steward and fireman and watchman on the deck of the Sir Hugh Allan when he looked about.

The first engineer of the De Levis described how, when the impact took place, he was in his room in bed, although awake, and how he succeeded in getting his window opened, went on deck and closed the steam of the boiler, the engines stopping and the fires being eventually put out.

The court came to the conclusion that the collision, which was providentially without loss of life, was due to the default of the master of each vessel in failing to carry out article 25 of the Rules of the Road, in which it is said that when vessels are in sight of each other they shall indicate the course about to be taken, by one blast, meaning, "I am directing my course to starboard"; two blasts, "to port," or three blasts, "My engines are going full speed astern." Article 25, requiring vessels in narrow waters to keep to their own side of the channel, was broken by the Sir Hugh Allan. The master of the Sir Hugh Allan had no right whatever to starboard his helm when he saw the green light of the De Levis crossing his bow from port to starboard, as he was leaving his own side of the channel. He should have hard aported and at the same time ordered full speed astern. Moreover, he must have known, if at all acquainted with the River St. Lawrence, that a vessel going west at that part of Point Citrouille must necessarily show her green light, then in rounding the point, in order to get Champlain lights in one, the red light must become visible. The reason given by his mate, who acted the part of pilot, that he thought it was a tug serving the dredge, cannot be accepted. It was only a supposition, and such being considered in the light of an uncertainty, precautionary measures should have been adopted either by stopping his vessel, or which is more in accordance with the rules of the road concerning narrow waters (article 25), he should have sounded one blast and ported his helm, taking his own side of the channel, which he failed to do. Instead, at the appearing of the red light which he had brought broader on his starboard bow by starboarding his helm, he continued to starboard, hard to starboard,

without giving any signal of his intention, maintaining his full speed until the collision was inevitable. When, according to the second engineer, the stop order was received, the impact occurred almost immediately. When his attention was called to the statement he had made to the Harbor Commissioners, which differed in many respects from his evidence, he stated that the evidence he was now giving was true, and that the statement made in writing was done in a hurry. As to his work in rescuing the crew and passengers of the *De Levis*, the evidence shows that he did all that could be done under the circumstances. For failing to observe the rule of the road, which contributed to the collision, his certificate is suspended for one year; but the court recommends that a mate's certificate for passenger steamer in minor inland waters be issued to him. This recommendation is due to his past good services, and to the aid he rendered in rescue work. The mate, who only obeyed the master's instructions, is not found to blame.

With regard to the captain of the *De Levis*, J.B. Blais, it is found that he also failed to signal his alteration of course when turning Point Citrouille and finding the *Sir Hugh Allan* was constantly showing its green light to his red, the court is of opinion that he should have sounded one blast, showing that he intended to keep his side of the channel. Moreover, his engines should have been stopped and his ship brought to a standstill when he found the other vessel acting strangely. The court is astonished to learn that he left his wheelhouse and post without ringing to the engine room the order to stop the engines, and that he found himself on board of the *Sir Hugh Allan*. We cannot accept the explanation that he fell through a space of 3 ft., due to a broken rail, on to the deck of the *Sir Hugh Allan*. The collision happened on the port side, and if it was his intention, as he avers, to give orders to lower boats, he would naturally have gone to the starboard side, which was uninjured, and allowed access to all parts of the top deck. He also stated that in falling he hurt his back, yet in some part of his evidence he said that if the boats of the *Sir Hugh Allan* had not been lowered he intended to jump and swim for his vessel. This contradicts his story of being injured by the fall. By his action in leaving his ship and crew to their fate he has shown himself unfit to be in charge of a vessel and in command of a crew. This court has always adopted stern measures in such cases, and on this occasion will not modify them, and therefore it considers that in the interests of the shipping public, and for the safety of the navigation of the River St. Lawrence, he be relieved from further responsibilities as a ship master, and hereby cancels his certificate.

We also cancel the fourth class certificate of the second engineer of the *De Levis*, Leon Crepeau, who, on his own evidence, abandoned his post to flee on to the deck of the *Sir Hugh Allan*. The steward was not called to give evidence, but the second engineer stated that he saw him on the deck of the *Sir Hugh Allan*. If such is the case, he, the steward, deserves the epithet applicable in such a case. If the duties of the steward on board of the *De Levis* are similar to those on board of every well disciplined vessel, he should have been at his post, attending and helping the passengers, especially the four women who happened to be on board. This court wishes to express itself as being absolutely opposed to a system prevailing on small craft of having no one on the look out, likewise entertaining passengers or anyone in the wheelhouse, the entrance to which should be prohibited

to all but those who have duties to perform. We also wish to suggest that some system of faithfully keeping a record of movements of these vessels, to be entered either in a log or journal, be inaugurated and enforced. This applies to both deck and engine room.

(Editor's Note.—In mentioning this collision in our September issue, the name of the Government vessel was given as *Levis*, which is the name under which she was registered, and as she appears on the Canadian register under no. 133904. We are, however, officially advised that her correct name is *De Levis*, and that it was through an error that she was registered as *Levis*.)

### Harbor Improvements at Vancouver.

S. M. McClay, one of the harbor commissioners for the port of Vancouver, B.C., in speaking at the American Association of Port Authorities' convention at San Francisco recently dealt with the improvements which the harbor commissioners are making and proposing for Vancouver. He stated candidly that the general equipment of the harbor and the facilities generally are not all they should be, considering the size and importance of the harbor, and announced that in the near future the harbor will be equipped with all the necessary facilities for handling vessels and loading cargoes with the utmost dispatch.

He said: "A new reinforced concrete wharf 800 ft. long, with a frontage of 300 ft. and a depth of 35 ft. at low water, is nearing completion. It is situated in the central section of the harbor and is of a construction new to the Pacific Coast, consisting of cribs reinforced with concrete and a heavy mass wall of concrete on top. This wharf will be furnished with two sheds 800 x 80 ft. Adjoining is a grain elevator now under construction and expected to be ready in time for at least part of this year's crop. There is every reason to believe that, with proper facilities for handling it, grain will come to Vancouver in steadily increasing measure from the western wheat growing provinces, more particularly as it is an open port all year round. In recognition of this the elevator is being constructed. It has a total storage capacity of 1,250,000 bush., a receiving capacity of 20,000 bush. an hour and a loading capacity of 60,000 bush. an hour, which can be loaded at the same time either to two boats at the rate of 30,000 bush. an hour or to four boats at the rate of 15,000 bush. an hour. The sacking plant is capable of sacking from 3,000 to 5,000 bush. an hour. This elevator is the first large grain elevator to be built on the Pacific coast of Canada, and it is confidently expected that its usefulness will justify the building of others at an early date.

"In False Creek, which is a small arm of the sea opening off the outer harbor, there are about 42 acres of tide flats which are uncovered at low water. These flats were crown granted to the commissioners, who have completed arrangements for their reclamation. When the work is completed this area will be used for industrial and warehouse sites with trackage and waterfront, which will be rented on long leases at low rentals. More applications for these sites have already been received from industrial concerns than the area will accommodate. This work is really only the first instalment of a larger project which is planned, but has not sufficiently materialized for public announcement.

"Last but not least among the important acquisitions to which Vancouver is looking forward is a drydock and shipbuilding industry, for which arrangements have been completed. The need for such a concern

has been frequently demonstrated, and in subsidizing the company which has received the contract the Government was careful to look ahead, as is indicated by the facts that the price is \$5,458,416.37, and the site secured comprises 60 acres. Proud as we are of our harbor, we realize that there are many respects in which it is capable of improvement—better fire fighting appliances, better policing and so forth—and although it will mean much time and labor it is the determination of my colleagues and myself to continue our efforts for the realization of our ideal—a port second to none."

### Proposed Additional Lake Steamships For Atlantic Ocean Service.

A Montreal press dispatch states that as a result of efforts initiated by the Dominion Government, Canada Steamship Lines, Ltd., is having five of its lake vessels overhauled to make them entirely suitable for trans-Atlantic service. The company has a number of vessels, built in Great Britain, some of which are already in service on the Atlantic. The report states that the five vessels which are being overhauled have capacity for carrying 100,000 bush. each, and that they will make two round trips to Europe before the close of navigation.

J.W. Norcross, Vice President and Managing Director, Canada Steamship Lines, Ltd., is reported to have said that there are already 21 of the company's vessels engaged in ocean and Gulf service, and that probably more of them will be used during the coming winter. We are officially advised that the press reports mentioned have misquoted certain remarks, and that anything which could be published at present would only be guess work.

The heavy demands which are being made on shipping and the high rates for freight, will probably draw a considerable number of vessels which are suitable for ocean travel, from the Great Lakes, but it is not anticipated that there will be a heavy transfer of vessels from the lakes to ocean service, as the majority of them have been specially designed and built for lake traffic only, and would not be suitable for ocean service.

**New Channel in St. Lawrence River.**—The Public Works Department has laid out a new channel through the Thousand Islands from Grenadier Island upward to the wide stretch between Wolfe and Howe Islands, is the St. Lawrence River. This channel is to be known as the Canadian Middle Channel, and is 300 ft. wide with at least a depth of 20 ft. It has been dredged where necessary, and swept to 18 ft. From Grenadier Island westerly it follows the old Canadian channel through the Raft narrows midway between the shores. At Wood Island two channels are provided, the Fiddlers Elbow for up-bound vessels, and the dredged cut south of Wood Island for downward vessels. From Lindoe Island lighthouse the channel extends in an almost straight line to 200 ft. south of the middle of Dumfounder Island and thence for 2,520 ft. to 430 ft. south from the west end of the small group of islands west of Dumfounder Island and thence to 730 ft. from the north extreme of The Punks and on to 320 ft. from Bass Rock Island and into the wide space between Wolfe and Howe Islands.

Schooner *Viola Pearl Co., Ltd.*, has been incorporated under the Dominion Companies Act, with \$1,000 capital and office at St. John, N.B., to acquire the schooner *Viola Pearl*, register no. 100,330 at port of Yarmouth, N.S., and to carry on a general shipping business.

### Atlantic and Pacific Ocean Marine.

The C.P.R. s.s. *Empress of Britain*, under requisition by the British Admiralty, was reported to be on fire in the Mersey, near Liverpool, England, Oct. 7. It took several hours to get the fire under control.

The Allan Line s.s. *Pomeranian* was reported to have run ashore near Havre, France, Oct. 21. She was released without damage on the same day, and proceeded to Havre under her own steam.

The Allan Line Steamship Co. has issued a writ against the s.s. *Kansan* for \$20,000 damages sustained by the s.s. *Pretorian* in collision on Sept. 15, in the St. Lawrence River, between the mouth of the Saguenay River and Cape Dogs.

The C.P.R. s.s. *Monteagle* was considerably damaged by fire, and a large quantity of cargo was destroyed while she was tied to her berth at Vancouver, B.C., Oct. 11. A press report states that in clearing out the burnt and damaged cargo, a large quantity of opium was discovered hidden in various parts of the hold.

The Blue Funnel Line s.s. *Calchas* was reported ashore off Point Wilson, near Port Townsend, Wash., Oct. 9, while downbound with cargo from Victoria and Vancouver, B.C. The freight was lightered and the vessel released and towed to port.

A press report from the Pacific coast, states that the Great Northern Steamship Co.'s s.s. *Minnesota*, which has been withdrawn from the Trans-Pacific trade on account of the drastic legislation respecting U. S. shipping, which comes into effect Nov. 1, is being sent to Great Britain, with a large cargo of grain, lumber and fish, and that she will be sold there.

The British Admiralty has released the C.P.R. s.s. *Empress of Japan* from further service for the present. She was requisitioned at the commencement of the war, and has been used in various services, chiefly in the transporting of troops. She is now at Hong Kong, being refitted for her customary service between Canada and the Orient, and is expected to sail about Dec. 1 for Vancouver.

The China Mail Steamship Co., incorporated in San Francisco recently, is reported to have purchased from the Atlantic Transport Co. a subsidiary of the International Mercantile Marine Co., the s.s. *China*, formerly owned and operated by the Pacific Mail Steamship Co. in the Pacific trade. This is

one of the five vessels which the International Mercantile Marine Co.'s receiver was authorized to purchase from the Pacific Mail Steamship Co., by the Federal District Court of New York, for \$250,000. She was built in 1889 and has a gross tonnage of 5,060.

### Maritime Provinces and Newfoundland.

The s.s. *Easington*, under charter to the Dominion Coal Co., which sailed from Sydney, N.S., during the last week in September for St. John, N.B., with coal, is reported to have been lost with all hands.

The Reid Newfoundland Co. chartered the s.s. *Durley Chine* from the Dominion Government recently, to take freight from Sydney, N.S., to St. John's, Nfld., as the accumulation at Sydney was greater than could be handled by the company's steamships *Kyle* and *Meigle*.

The s.s. *Kron Prinz Olav*, under charter to the Dominion Coal Co., which sailed from Sydney, N.S., Sept. 27, for Montreal, with coal, has not been heard of since, and it is feared that she has been lost with all hands. The Dominion Government s.s. *Montcalm* spent some time in searching the route but without success.

Various press reports indicate that the Newfoundland sealing steamships *Beothic*, *Bellaventure*, *Bonaventure* and *Nascopie*, will be sold to the Russian Government for ice breaking service at Archangel. These vessels are all of recent construction, specially adapted for the sealing trade and for service in ice.

The Nova Scotia Steel and Coal Co.'s s.s. *Wasis* is reported to have been sold to an English firm and to have sailed from Halifax, N.S., Oct. 17. She was built at Meadowside, Scotland, in 1883, and at different times has been named *West Coast*, *Val de Travers* and *Kampocus*. She is screw driven by engine of 53 n.h.p. and is of the following dimensions,—length 160.4 ft., breadth 25.1 ft., depth 13.5 ft.; tonnage, 480 gross, 255 register.

The electrically operated submarine fog bell, which was placed eastward of Harbor shoal, off the entrance to Louisburg harbor, N.S., has been discontinued, and a steel cylindrical bell buoy, surmounted by a pyramidal steel frame with an open framed bell shaped topmark, having dependent from it a submarine bell which will be rung at irregular intervals by the motion of the buoy

on the waves, has been placed about 500 ft. from the Louisburg gas and whistling buoy.

Among the provisions of the act to amend the acts imposing taxes on certain companies, passed by the Prince Edward Island Legislature, recently, is one which imposes on all companies carrying on the business of common carriers for the transportation of freight and passengers by steamships, which have their head offices or organizations in the province, \$100 each, and on the Charlottetown Steam Navigation Co., \$200; on all persons, firms or companies, whether incorporated or not, carrying on the business of common carriers, between Prince Edward Island and any other Province of Canada, or with any British possession, or any foreign country, \$100.

The Department of Public Works received tenders, Oct. 6, for the construction of extensions to the wooden shed at berth 15, and for the construction of a wooden shed between Rodney slip and Sand Point slip, at West St. John, N.B. The extensions to the shed at berth 15 will consist of two additional sheds, one being 199 ft. long, 80 ft. wide and 11 ft. 11 ins. from top of floor to eaves. The second extension will be 4 ft. higher than the first one. The wooden shed to be built near Rodney slip will be 155 ft. long, 70 ft. wide at one end, and 42 ft. wide at the other end, and 15 ft. 11 ins. from top of floor to eaves. The work is to be completed by Dec. 1, under a penalty of \$50 a day for each day in default.

### Province of Quebec Marine.

The Danish barque *Sostreame*, which was driven ashore at Ile Barnabe, near Rimouski, recently, has been abandoned as a total wreck.

The Dominion Government has awarded a contract to the Levis Wrecking Co., for \$27,000 for the raising of the s.s. *Montmagny*, which was rammed and sunk by the s.s. *Lingan* last year, near Grosse Isle.

The Gaspé Steamship Co.'s s.s. *Lady of Gaspé*, while bound from Montreal to Quebec and Gaspé ports, ran aground, near the Quebec Bridge site, Oct. 13. She was reported to be still aground, Oct. 23, but it was expected that she would be released with comparatively little damage.

McLean, Kennedy Ltd., has been incorporated under the Dominion Companies Act, with \$20,000 authorized capital and office at Montreal, to carry on a general steamship

management and agency business, to own and operate steam and other vessels, render salvage and towing services, etc.

### Ontario and the Great Lakes.

The Farrar Transportation Co.'s s.s. Meaford grounded near the Detour lighthouse, Oct. 18, and was released with small damage the same day.

F. E. Hall and Co.'s s.s. Byron Whitaker, while bound to Montreal, with grain, broke her rudder, lost her wheel and grounded at Cardinal, Ont., Oct. 18.

An order in council has been passed establishing regulations for the governance of the ferry across the St. Lawrence River between Prescott, Ont., and Ogdensburg, N.Y., respecting rates on automobiles.

The Cleveland and Buffalo Transit Co., which has been paying 5% annually, has passed its dividend, the directors stating that this is necessary owing to decreased passenger traffic.

Canada Steamship Lines s.s. W. Grant Morden, Oct. 18, took what is stated to be the largest single cargo of grain carried by any boat on the Great Lakes, from Port Arthur to Port Colborne. The actual quantity is given as 476,315 1-3 bush.

The Shenango Steamship Co., of Cleveland, Ohio, is suing the Spo Dredging Co. for \$20,000 for damage sustained by the s.s. William P. Snyder in the Sault Ste. Marie Canal by striking a boulder, alleged to have been placed by the dredging company.

The Canadian Lake and Ocean Navigation Co.'s s.s. Turret Cape, when down bound from Fort William, Oct. 23, became disabled through trouble with her steering gear near Iroquois Point, and was towed to Sault Ste. Marie for repairs.

The s.s. North King, owned by Canada Steamship Lines, Ltd., and operated in the neighborhood of Kingston for some time, by the present company as well as by its predecessor, the Richelieu and Ontario Navigation Co., was taken to Sorel, Que., Oct. 21. It is stated that she will in future be used as a ferry around Montreal.

F.F. Wood, of Niagara Falls, who died there, Oct. 12, was one of the chief promoters of the Owen Sound Drydock and Shipbuilding Co., which was in process of formation prior to the war, with the object of constructing a dry dock and shipbuilding plant at Owen Sound, which the municipality had entered into an agreement to subsidize.

The Toronto Towing Co., Ltd., has been incorporated under the Dominion Companies' Act, with \$100,000 authorised capital and office at Toronto, to build, own and operate all classes of vessels and to carry on a general towing and shipping business. The incorporators are W.H. Irving, H.H. Davis, J.D. Rumball, J.S. Batty and N. Boynes, Toronto.

The United States Lake Survey reports the levels of the Great Lakes in feet above tide water for September, as follows:—Superior, 602.49; Michigan and Huron, 579.96; Erie, 572.20; Ontario, 245.45. As compared with the average September levels for the past ten years, Superior was 0.21 ft. below; Michigan and Huron, 0.85 ft. below; Erie, 0.19 ft. below and Ontario 0.78 ft. below.

Canada Steamship Lines Ltd., was charged at the Toronto Police Court, Oct. 22, with a breach of the city bylaws by permitting black smoke to be emitted from the s.s. Cayuga, for 31 minutes, while the vessel was at her dock. The case has been before the court several times and has been adjourned from time to time. It is contended by the

company that it is not bound by the city bylaws. Decision was reserved.

The Ontario Car Ferry's Co.'s car ferry steamship Ontario No. 1, which was taken off the route between Cobourg, Ont., and Rochester, N.Y., for general overhaul, has returned to service. While out of service, her place was taken by Ontario No. 2, the company's new vessel built at Toronto recently. The latter vessel is now at Polson Iron Works, Toronto, where she was built, being prepared for her winter work.

The Northern Navigation Co. has been granted supplementary letters patent under the Ontario Companies Act, amending the letters patent incorporating the company by striking out the provision that the operations of the company be carried on on the waters of Georgian Bay and that portion of Lake Huron within Ontario, and on the various arms, bays and inlets of these waters and the rivers tributary thereto; also authorizing the company to hold meetings of shareholders, etc., outside Ontario, and to fix by bylaw the quorum of directors.

The construction of the southerly extension of the exterior breakwater in Chicago harbor is announced to commence shortly. It will be of rubble mound, beginning at the southeast or outer end of the present structure and extending due south toward the vessel course for entering the harbor. To mark the location during construction, a gas buoy painted red and showing a fixed red light will be placed about 1,050 ft. south from the end of the old breakwater and on a line with the northerly face of the new city pier, in 28 ft. of water. Between this buoy and the southeast end of the present exterior breakwater, it will be extremely dangerous for vessels to pass.

Tenders were received early in October for the refloating of the Cadillac Steamship Co.'s s.s. Western Star, which was wrecked off Manitoulin Island, Sept. 24. She struck on Robertson rock, near Clapperton Island, in the north channel of Georgian Bay, and is reported to be resting in 5 ft. of water forward and in 114 ft. at the stern, and is consequently standing almost on end. The tenders were submitted on the no cure no pay plan, the vessel to be delivered to a U.S. port where there is a dry dock. Two bids were received and will be passed on to the underwriters. The bid which it is reported may be the one accepted, is for \$58,000, or 65% of the value of the vessel.

In order to utilize all of the lake vessels which are suitable for ocean traffic, during the winter when lake navigation is closed, it has been suggested that such of them as are too large to pass through the canals be cut and refitted after clearing the canals. A Lloyd's agent is reported to have stated that this is perfectly feasible for vessels of 43 ft. beam and under, that most of the vessels are strong enough for ocean service, and that the changes required would be comparatively inexpensive. This method has been followed on more than one occasion, both for taking vessels built in Great Britain to the upper lakes, and also for taking vessels which were built on the Great Lakes for operation there, to the Atlantic coast.

### British Columbia and Pacific Coast.

The Dominion Government has renewed its subsidy agreement for ten years, with the British Columbia Salvage Co., providing for the payment of \$10,000 a year for the maintenance of a wrecking and salvage plant in Pacific Coast waters.

The Vancouver Harbor and Dock Extension Co. consented recently to a judgment for foreclosure for \$53,000, due as a balance on certain lands on Lulu Island, the judgment carrying with it an allowance of four months for redemption.

The Imperial Oil Co. has deposited with the Minister of Public Works at Ottawa and at the local registry office at Vancouver, a description of site and plans for a wharf to be built in False Creek Vancouver, immediately west of Connaught Bridge.

The Vancouver Shipmasters' Association has protested against the work of reclamation being carried out on the False Creek flats, condemning it from a marine standpoint as damaging to the interests of the city as a port.

The s.s. Delhi, which was docked at Prince Rupert for examination after having been wrecked on the Alaska coast about a year ago, but which was found not to be in fit condition for repair, has been sold to Capt. Babington, Prince Rupert, for \$2,000.

The United States s.s. Mariposa ran ashore on Campbell Island, about 250 miles north of Vancouver, B.C., Oct. 8. She is reported to have slipped into deep water on the following day, and to be in such a con-

may she will probably be abandoned as a total loss. She is valued at \$350,000.

The Grand Trunk Pacific Coast Steamship Co. has discontinued its tri-weekly summer service between Seattle, Wash., Victoria, Vancouver and Prince Rupert, and has substituted a bi-weekly service. The steamships Prince Rupert and Prince John will be replaced by the Prince Rupert and Prince George, the latter being laid up.

The s.s. Delhi, which was dry docked at Prince Rupert recently for examination, will, it is stated, be abandoned entirely, as it is considered that the damage to the hull is so extensive as to make it not worth repairing her. An offer of \$1,500 has been received for her, for the sake of the machinery, which is regarded as in very poor condition.

The Union Steamship Co.'s s.s. Capilano, when half way between Cape Mudge and Savary Island, Sept. 30, sank during heavy weather, the crew being saved by taking to the boats and making Savary Island. The Capilano was built at Vancouver in 1892, and was screw driven by engine of 28 n.h.p. Her dimensions were: length, 120 ft.; breadth, 22.2 ft.; depth, 9.6 ft.; tonnage, 231 gross, 157 register.

The Vancouver Harbor Commissioners have applied to the Vancouver City Council for a permit for their scheme to reclaim the mud flats under the Granville St. bridge for industrial purposes. The work is estimated to cost \$195,000, and will be under the supervision of C.C. Worsfold, Resident Engineer, Public Works Department. It is reported that work has been commenced, a system of creosoted wood piling having been adopted.

The Union Steamship Co. is reported to be negotiating for the purchase of the whale tender Gray for freight service. It is stated that as soon as the Gray has finished removing whale products from Kyuquot and Naden Harbor, she will be chartered to the Union Steamship Co., and then sold. The Gray was formerly known as Petriana, and was built in Scotland. After going to the Pacific coast she was run in freight service to Prince Rupert, and was later purchased by Canadian North Pacific Fisheries Ltd.

The s.s. Otter, in the C.P.R. British Columbia Coast Service, when going to assist in salving the s.s. Mariposa, Oct. 9, ran ashore in the channel between Darcy and James Islands. Attempts to release the vessel were unsuccessful, as she turned turtle and was abandoned as a total loss. Her value was placed at between \$30,000 and \$40,000. She was built at Victoria, B.C., in 1900, and was screw driven by engine of 24 n.h.p. Her dimensions are: length, 128 ft.; breadth, 24.5 ft.; depth, 11 ft.; tonnage, 366 gross, 232 register.

It is announced that the second unit of the North Fraser jetty across the sandheads at New Westminster is about half finished, and that the work will be completed about the end of Feb. 1916. The lower mattress, 190 ft. wide and 2 ft. thick, has been laid in position for the entire length of fill, 710 ft., and the upper mattress, which forms a rock slope, has been laid for 1,800 ft. The complete jetty will consist of three units, and a north jetty will be built, thus forming a permanent channel which, it is expected, will require a minimum of dredging.

The river flowing westerly into the Fraser River 60 miles above Fort George, B. C., formerly known as the north fork with its south branch of the Fraser River, has been named McGregor; the creek flowing westerly into the McGregor River about 27 miles from its mouth, formerly known as the north branch of the north fork of the Fraser River, has been named Herrick, and

the creek flowing southeasterly into Herrick creek about two miles from its mouth, formerly known as Bad River, has been named James, all in honor of Capt. James Herrick McGregor, the first President of the British Columbia Surveyors Association, who joined the 16th Battalion, Canadian Expeditionary Force, and was killed in action at Ypres.

### Atlantic Ocean Tonnage for Canadian Trade.

The Minister of Public Works, Hon. Robt. Rogers, issued the following statement in Ottawa, Oct. 6: "Since Sir Robert Borden's return from London, the following additional ships have been added to the overseas transport service, plying to Canadian ports: Dunedin, Trankmere, Glenspear, Policastria, Horatius and Marquis Bacqueham. This brings the number of ships in this service up to a total of 20. These ships are for the transportation of supplies purchased by the Imperial authorities, and it is estimated that for the balance of the season over two thirds of their cargo space will be filled with Canadian agricultural products, such as hay, grain and flour. As a result of representations by the Canadian Government, an expert from the War Office is now in Canada to arrange for increased purchases of grain and flour and for the transportation of the supplies thus purchased. In addition to the above ships, a fleet for the transportation of horses, hay, etc., has been provided, seven of such remount transports having sailed from Montreal within the past two weeks.

"With regard to provision for the general commercial trade, the Imperial authorities have, during the past two months, refrained from requisitioning any ships on the Canadian routes, so that the increases made in the Imperial transport service to Canada are not additions to the transportation facilities for Canadian products. Further, the Imperial Government, when possible, is releasing, temporarily at least, Canadian liners already requisitioned. The Mount Temple, of the C.P.R. line, will in this way re-enter the commercial trade during the present week. Advices have also been received that the Kawack, Heligoland and Barenfels, ships not previously in the Canadian service, are being released to enter this service immediately. Military necessity must govern every movement made."

Manchester Liners, Ltd., is adding to its fleet a new vessel which was recently launched and named Manchester Hero. Orders have also been placed for the construction of two 13 knot vessels. It cannot be stated exactly when either of these vessels will be delivered, on account of the condition of shipbuilding in Great Britain, but it is hoped that they will be ready for service next spring. Arrangements have been made for an extension of the service to the United States, by joining with the Furness and Johnston Lines in instituting a regular service between Manchester, England, and Baltimore. This is now being operated under the name of the Furness-Johnston-Manchester Liners Joint Service, and the first vessel sailed from Baltimore, Oct. 2.

Canada Atlantic Transit Co.—The following directors were elected at the annual meeting recently: E.J. Chamberlin, President; H.G. Kelley, Vice President; Frank Scott, Secretary-Treasurer; J.E. Dalrymple and H.R. Safford.

The U. S. Engineering Department is considering the question of deepening the St. Clair River channel along the waterfront at Port Huron, Mich.

### The Suggested Suspension of the Coasting Laws.

In Canadian Railway and Marine World for October, mention was made of the rumors that the Dominion Government had consented to suspend the coasting laws, and thus allow United States lake vessels to carry grain between Canadian ports. These rumors were persistent, and it was even stated that a U.S. trade commissioner at the head of the lakes had advised the U.S. Government that the suspension had been ordered by the Dominion Government. As we then stated, our advices from Ottawa up to the date of going to press with that issue, were to the effect that the Government had no intention of suspending the coasting laws.

Since then, vessel owners and agents at the head of the lakes, interviewed by various press representatives, state that there is no necessity for the suspension as the Canadian companies are quite capable of transporting the grain from the head of the lakes to lower lake points as fast as the receiving elevators at such points can take it. They claim that the suspension would be unfair to Canadian vessels, as for the past two years rates have been low and cargoes so scarce that in some cases vessels were operated at a loss.

Additional Elevator Suggested for Montreal.—In response to various suggestions, W.G. Ross, Chairman, Montreal Harbor Commissioners, is reported to have stated that the commissioners are prepared to build a special elevator for tramp steamships as soon as conditions warrant. An elevator with capacity for 1,500,000 bush., and with conveyors to four berths would cost approximately \$1,000,000, and the construction of the four berths with the necessary facilities would cost another \$1,000,000. The interest and upkeep would cost about \$200,000 a year, and on this basis the commissioners would be out of pocket unless the receipts of the suggested elevator reached 20,000,000 bush., and to make it any success it would be entirely dependent on an ample supply of tramp steamships. It is believed that the construction of such an elevator will not be long delayed, and the commissioners are prepared to ask the Government to consider the necessity of proceeding with it as soon as conditions make it possible.

Manchester Liners, Ltd., which operates a steamship line between Manchester, England, and Canada, has paid a dividend for the financial year 1914-15, recently concluded, of 7½%, and has also paid a bonus of the same amount. In the previous year the dividend paid was 6%. The profits for the past year exceeded those of the previous year by nearly £100,000. Furness, Withy and Co. are closely associated with this company.

Ocean Freight Charges and the Rate of Exchange.—A Montreal press dispatch of Oct. 20 states that at a meeting of the council of the Montreal Board of Trade, Oct. 19, it was announced that the Shipping Federation and the C.P.R. had responded to the council's suggestion, and had agreed to a fixed rate of exchange of \$4.86 2-3, for all steamship freight charges, to go into effect during the following week.

I. Schaefer, a naturalized Austrian, who has been acting as a steamship ticket agent at Montreal for some time, and who was charged shortly after the commencement of the war with high treason in attempting to assist a number of Austrian subjects to leave Canada for active service with the enemy, is to be placed on trial a second time, the jury having disagreed, Oct. 1. The extreme penalty for the offence is death.

## Shipping Letters From the Head of the Great Lakes.

F. and W. Jones, shipping brokers, Fort William, Ont., have written as follows:

**Oct. 9.**—Arrivals of coal picked up during the past week. Eight cargoes being unloaded, all bituminous. Three were carried in United States steamships, the balance in Canadian. Three vessels are now under the rigs and four en route. Dispatch in unloading has been excellent, the docks starting on all vessels on arrival and working straight through. Car shipments to the west are still increasing and stocks are consequently being reduced, but there is no likelihood of any shortage.

Grain shipments from these ports are still on the increase, the total shipments during the week being 9,057,477 bush. of all grains, an increase of 1,500,000 bush. over last week. This was carried in 59 steamships, 32 cargoes went to Canadian ports and 27 to U. S. ports, but owing to the larger carrying capacity of the U. S. vessels more grain has been consigned to U. S. ports than to Canadian ports. Thirteen steamships are loading grain today, seven are en route light for grain and four coming with coal cargoes are lined up to take grain down. Dispatch in loading the past week has been seriously interfered with by heavy rains, and night work on Tuesday and Wednesday was practically impossible, although some houses where a boat was finishing worked through until about 10 p.m. High winds made shifting very difficult. Receipts from the west for the first four days of the week were exceedingly good but the past two days they have dropped off owing to the wet weather in the west. The weather probabilities, however, are for warmer weather and receipts should pick up again during the coming week.

**Oct. 16.**—Trade in coal at these ports brightened up considerably during the past week. Ten cargoes of bituminous coal have been unloaded. One cargo of coke and two cargoes of bituminous coal are now under the rigs, four cargoes are en route. Car shipments to the west have picked up greatly and are now considered normal, with the prospects of increasing greatly during the last half of the month. Docks are working on steamships to fullest capacity and boats are experiencing no holdup whatever. One cargo of ore went to Cleveland this week, one charter is reported to load this week.

Shipments of grain are still on the increase; those of this week are 12,712,862 bush., being 3,500,000 more than those of the previous week. This grain was carried in 69 vessels, 29 of which were billed to Buffalo and Erie side ports and 40 to Canadian points. In the same week last year shipments were 5,128,668 bush., so that the business this year is more than double that of last year. From the figures below it will be noticed that shipments exceed receipts by over 1,000,000 bush. and stocks this week are less than those of last week. Receipts from the west still continue to be of an embarrassing quantity, but the weather for the past two or three days has been decidedly more favorable and a large increase in receipts is expected. Dispatch in loading has been held up considerably on account of the lack of stocks, nearly all vessels having to wait. Stock in store at date, receipts and shipments during the week are as follows:

	Stocks.	Receipts.	Shipments.
Wheat .....	9,850,128	10,025,263	11,789,738
Oats .....	1,116,050	871,359	661,229
Barley .....	366,125	230,578	170,353
Flax .....	650,669	23,356	100,542

**Oct. 23.**—Coal receipts dropped again this week, there being only seven cargoes un-

loaded, all bituminous coal. Two steamships are now under the rigs and four are en route. Car shipments to the west have increased greatly and are steadily improving.

Grain shipments during this week were slightly below last but this by no means an indication of a falling off, as last week's shipments were far above the average. Total shipments of all grains were 12,157,027 bush., this is 555,835 less than last week. This grain was carried in 72 vessels, 20 cargoes went to Buffalo and Erie side ports and Port Huron, the balance going to Canadian ports. Grain has been coming down more freely the past week and stocks consequently have accumulated, there being 1,500,000 bush. more in store this week than last, total receipts being 13,873,681 bush. Threshing in the western provinces has been seriously delayed on account of adverse weather conditions; it is computed that little more than 5% of the crop in Alberta, 15% in Saskatchewan and 50% in Manitoba has been actually threshed, thus leaving a large percentage still to be shipped forward. The indications are that much of this will not be ready to come forward till later in the season or, possibly early in the spring. The deductions from these conditions are that the close of navigation will see a great rush forward of grain from the west, not only for lake shipments but also for vessel winter storage and still leave a large quantity for early shipment next year. Stocks in store at date, receipts and shipments during the week are as follows:—

	Stocks.	Receipts.	Shipments.
Wheat .....	10,938,208	11,949,331	10,861,251
Oats .....	1,710,672	1,514,041	919,417
Barley .....	645,067	363,183	75,241
Flax .....	396,677	47,126	301,118

## Mainly About Marine People.

**Capt. L. Jones**, master of the s.s. *Calcutta*, fell from the gangway between his vessel and the wharf, at Montreal, Oct. 17, and was drowned.

**A. T. Ross**, who died at Cornwall, Ont., Oct. 18, aged 85, had lived all his life in the locality, and for six years prior to 1895 was Superintendent of the Cornwall Canal.

**R. G. Allan**, formerly of the Allan Line Steamship Co., whose death was announced in a recent issue, left an estate valued at £328,965 11s 1d.

**Capt. C. H. Jenkin**, a well known lake mariner, and for several years commanding G.T.R. car ferries, died at Detroit, Mich., recently after a long illness.

**Sir Hugh Montagu Allan**, of Montreal, formerly of the Allan Line Steamship Co., is now President of the Canadian Pensions and Claims Board, which has its offices at Folkestone, Eng., where he is living at present.

**J. A. Martin**, heretofore Agent, Allan Line Steamship Co., Glasgow, Scotland, has been appointed Assistant Manager, Canadian Pacific Ocean Services, Ltd., with office at Royal Liver Building, Liverpool, Eng.

**Sir Thomas B. Bowring**, head of the firm of C. T. Bowring and Co., shipowners, etc., of Liverpool, London, Eng., and St. John's Nfld., died in England, Oct. 19. He was born at St. John's in 1847 and was knighted in 1913.

Lady Allan, wife of Sir Montagu Allan, formerly of the Allan Line Steamship Co., is reported to have entirely recovered from the serious injuries she sustained when the *Lusitania* was sunk by a German submarine in May.

**W. T. Payne**, Manager, Trans-Pacific Steamships Service, C.P.R., Yokohama, Japan, was

a passenger, with his family, on the C.P.R. s.s. *Monteagle*, which arrived at Vancouver, B.C., from the Orient, Oct. 6. He proceeded to Montreal the same day.

**Major Adolphe V. Roy**, M. Can. Soc. C.E., graduate of Ecole Central, Paris, France, of the 22nd French Canadian Regiment, has been killed at the front. He was Vice President of the Sincennes-McNaughton Line, Ltd., forwarders and tug owners, and was for several years one of the Montreal Harbor Commissioners.

**Capt. Main** and the officers and crew of the Allan Line s.s. *Hesperian* were presented with the awards made by the War Risks Association, by the President of the Liverpool Board of Trade, at Liverpool, Eng., Oct. 9. The captain received 50 guineas and the men one month's pay and one month holiday with pay, in recognition of their efforts to navigate the vessel to Queenstown, Ireland, after she had been damaged by a torpedo or mine. The attempt made to reach Queenstown was unsuccessful.

## Telegraph, Telephone and Cable Matters.

The Western Union Telegraph Co. is building three additional houses at Bay Robert, Nfld., for the married men of its staff there.

The Montreal Telegraph Co. paid its usual quarterly dividend of 2%, and its usual annual bonus of 1%, Oct. 15.

**G. D. Perry**, General Manager, and **C. E. Davis**, Traffic Manager, Great North Western Telegraph Co., Toronto, are on a trip of inspection through the west. While in Saskatoon, Sask., Oct. 6, they supervised the transfer of the company's office from 22nd St. East to 2nd Ave.

**H. Hulatt**, heretofore Commercial and Traffic Superintendent in charge of telegraph lines west of Fort William, Ont., and also Superintendent of Time Service, Grand Trunk Pacific Ry., Winnipeg, has been appointed Manager of Telegraphs, G.T.R. and G.T. Pacific Ry., Montreal, vice A. B. Smith, who has resigned on account of ill health.

**John Trotter**, who died at Victoria, B.C., Oct. 4, following an operation, was formerly in the C.P.R. Telegraphs service, and was connected with the construction of the telegraph line along the railway's Crowsnest Pass Branch, and was later transferred to line work on Vancouver Island. He retired about four years ago.

**G. D. Perry**, General Manager, Great North Western Telegraph Co., is reported to have stated in Vancouver, Oct. 16, that his company purposes stringing a double copper line between Montreal and Vancouver for commercial business, and that this will take about 6,000 miles of wire and cost about \$300,000.

The work of laying the Commercial Cable Co.'s underground cable from the submarine cable terminal at Cuckold's Cove to its new office building in St. John's, Nfld., has been completed. The office building is approaching completion, and it is expected to be finished by the end of the year, when the operation of the cables will be transferred from Cuckold's Cove to St. John's.

The U.S. Navy Department has announced the successful accomplishment of wireless telephony between the naval stations at Arlington, Va., and Mare Island, Cal., about 2,500 miles. A little later it was announced that the American Telegraph and Telephone Co. had carried on a conversation by wireless between New York and the Hawaiian Islands, nearly double the distance.

The Great North Western Telegraph Co.'s annual meeting was held at Toronto, Sept.

The directors for the current year are: Z.A. Lash, President; Adam Brown, Vice President; G.D. Perry, General Manager; Jas. Bradley Hon. J.K. Kerr, Amosius Jarvis, F.D. Hayes, T.B. Hanna and R.P. Ormsby. The Secretary and Auditor is A.C. McConnell, and the Treasurer D.E. Henry.

C.P.R. telegraph operators have contributed over 100 men for overseas service, and are making arrangements whereby each man remaining at home contributes one day's pay a month, in order to provide regular and reasonable relief for dependent families and to relieve the general patriotic fund. The wife of each operator on active service will receive \$20 a month, with suitable allowances for children.

### Transportation Conventions in 1915-16.

Nov. 17.—American Railway Association, Chicago, Ill.  
 Nov. 17-19.—International Association of Ticket Agents, New Orleans, La.  
 Dec. 1-11.—American Society of Mechanical Engineers, New York, N.Y.  
 Dec. 12.—American Society of Transportation and Car Accounting Officers, St. Louis, Mo.  
 Jan. 18-20, 1916.—American Wood Preservers' Association, Chicago, Ill.  
 March 2-23, 1916.—American Railway Engineering Association, Atlantic City, N.J.  
 May, 1916.—International Railway Fuel Association, Chicago, Ill.  
 May 2-5, 1916.—Air Brake Association, Atlanta, Ga.  
 May 19, 1916.—Association of Railway Claim Agents, Atlantic City, N.J.  
 June 20-22, 1916.—Association of Railway Telegraph Superintendents, St. Paul, Minn.  
 June 20-23, 1916.—American Association of Freight Agents, Cincinnati, Ohio.  
 June 21, 1916.—Train Despatchers' Association of America, Toronto.  
 June 21, 1916.—American Association of General Baggage Agents, Boston, Mass.  
 June 28, 1916.—Association of American Railway Accounting Officers, Detroit, Mich.  
 August, 1916.—International Railroad Blacksmiths' Association, Chicago, Ill.  
 September, 1916.—Master Car and Locomotive Painters' Association of United States and Canada, Wilmington, Del.  
 September, 1916.—Railway Signal Association, Mackinac Island, Mich.  
 Sept. 19-22, 1916.—Roadmasters and Maintenance of Way Association, Chicago, Ill.

The Panama Canal has, it is officially announced, been closed for the remainder of the year, owing to landslides in the Culebra Cut blocking the passage. It is stated that the canal will probably not be opened again until all danger of landslides has been permanently removed.

### Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:  
 Canadian Car Service Bureau—J. Reilly, Manager, 401 St. Nicholas Building, Montreal.  
 Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.  
 Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.  
 Canadian Freight Association (Western lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.  
 Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday each month, 8.30 p.m., except June, July, and August.  
 Canadian Society of Civil Engineers—C. H. McLeod, 176 Mansfield St., Montreal.  
 Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.  
 Central Railway and Engineering Club of Canada—C. L. Worth, 409 Union Station, Toronto. Meetings at Toronto, 3rd Tuesday each month, except June, July, and August.  
 Dominion Marine Association—F. King, Council Kingston, Ont.  
 Eastern Canadian Passenger Association—G.

H. Webster, 54 Beaver Hall Hill, Montreal.  
 Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.  
 Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.  
 Express Traffic Association of Canada—W. H. Burr, Chairman, Toronto.  
 Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.  
 Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.  
 International Water Lines Passenger Association—M. R. Nelson, New York.  
 Niagara Frontier Summer Rate Committee—James Morrison, Montreal.  
 Nova Scotia Society of Engineers—A. R. McCleave, Halifax, N.S.  
 Quebec Transportation Club—A. F. Dion, Quebec.  
 Ship Masters' Association of Canada—Capt. E. Wells, 45 St. John Street, Halifax, N.S.  
 Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.  
 Twin Cities Local Freight Agents' Association—E. J. Travers, Fort William, Ont.  
 Western Canada Railway Club—Louis Kon, Box 1707, Winnipeg. Meetings at Winnipeg, 2nd Monday each month, except June, July, and August.

Electrolytic Nickel—99.80%

Prime Metals for the manufacture of Nickel Steel, German Silver, Anodes, and all remelting purposes. Our Nickel is produced as rods, sheets, strip stock, wire, and tubes.

**MONEL METAL** We are Sole Refiners of this natural stronger than steel, non-corrosible alloy. Produced as rods, flats, castings, tubes, sheets, strip stock and wire. Ask for descriptive booklet.

Send Inquiries direct to us.

**THE INTERNATIONAL NICKEL COMPANY, - 43 Exchange Place, New York**

## Announcing the Columbia R. S. A. Signal Cell

This cell is already in use by over 30 railroads in the United States and Canada, and is giving satisfactory service in every instance.

The construction is simple, but rugged.

The copper oxide element is unique in that the copper oxide is used in the loose, rather than in the compressed state.

This allows a free circulation of the electrolyte and a constant internal resistance.

The perforated metal container prevents a short circuit with the zinc element.

The element is self oiling, which means that the possibility of failure due to lack of oil is obviated.

It is not affected by weather conditions.

Designed to meet the requirements of all classes of railway work.

Write to us for detailed information.

**CANADIAN NATIONAL CARBON COMPANY, Limited**

99 Paton Road

TORONTO, ONTARIO

# The Keynote Of Its Success Is Dynamic Indication

THE features of vital importance in considering the merits of any system of power interlocking are those which are designed to give the greatest measure of *safety* together with facility of operation.

FIRST—The means provided to check the correspondence of movement between lever and the switch, signal or other functions controlled by it.

SECOND—The means for preventing unauthorized movement of switches, signals, or other controlled functions.

The G. R. S. Electric Interlocking System fully meets the first important requirement by means of *dynamic indication*. The second requirement is met by a means in which all the contacts required for this protection form a part of the operating circuit, thus checking their integrity at each operation.

Eighty per cent of all power interlocking now installed is G. R. S. Electric Dynamic Indication. On a basis that one interlocking lever in use for one year equals one lever-year, the G. R. S. System now shows a record of 110,000 lever-years.

The reliability and general merit of the G. R. S. Electric Interlocking System is conclusively proven, not only by its selection for the largest power interlocking in the world, but also by its well-nigh universal selection for all power interlocking.

## Money paid for these Brake Shoes was largely money wasted

Why?

Because these unreinforced brake shoes did not give equivalent service for their cost, having broken in service before their life had barely commenced.

And the remedy?

Use only Steel Back Brake Shoes—then you will get your brake shoe money's worth in long and safe service.

Manufactured in Canada.

## A Clear Track To Promotion

How to get off the side-track—how to break the couplings that hold them near the bottom of the pay roll—is the one big problem that troubles most railroaders.

There's a clear track to promotion—without grade or curve—open to the man that has the backbone and grit to take it. Before you can travel this track to promotion and bigger pay you must "coal up" with knowledge—you must be specially trained.

The Railway Instruction Department of the International Correspondence Schools is able and ready to give you the training you must have. You can get it right at home without losing an hour's time from your present job.

It will not cost anything to find out how the I.C.S. can train you for a better job. Put an "X" near the class of work you would like to follow, in the attached coupon, and mail it to the I.C.S. This won't obligate you in the least. It will simply bring full information by return mail.

## Mark the Coupon NOW

International Correspondence Schools

# FIVE FAIRMONT MONEY-SAVERS

Throughout Canada hundreds of FAIRMONT Engines and Motor Cars are giving the best of satisfaction. For years you have imported them, and this year's business is the biggest yet. FAIRMONTs work every day in the year, and haul loads impossible for other cars.

Quantity prices to railroad companies.  
Easy payments to railroad men.

# Flange Lubrication Should be Automatic

Flange lubrication to be efficient should be automatic, absolutely independent of your engineer, and at the same time the device itself should be so simple and yet so accurate that it will be practically trouble proof. The

## Detroit Automatic Flange Lubricator (Pendulum Type)

is absolutely automatic and at the same time simple. It is all in the pendulum. Any lateral movement of the locomotive causes the pendulum to swing. This oscillation rotates, rocker-like, the pendulum shaft, which produces alternating strokes of the two plungers in the pumping unit.

The use of the Detroit Automatic Flange Lubricator insures positive lubrication just when it is needed. May we send booklet F-O 81? It contains all the facts as well as drawings. Write to-day.

**CANADIAN DETROIT LUBRICATOR COMPANY, LTD.**  
WALKERVILLE, ONT.

Canadian Sales Agents: Taylor & Arnold, Ltd., Montreal.

Standard form of our geared jacks.

## Celebrated "H & E" Lifting Jack

Our Patent Ball-Bearing Geared Jacks are Ideal in Railroad and heavy Construction Work.

These Jacks are built for heavy service in bridge, roundhouse and wrecking work, are made with great care from the very best material and will be found the most satisfactory jacks for the purpose on the market.

## Canadian Brakeshoe Company, Limited SHERBROOKE, QUE.

Sole Agents for Brakeshoes for Canada outside of B.C., Messrs. Taylor & Arnold, Limited, Montreal and Winnipeg. Sole Agents for B.C., The B.C. Equipment Co., Vancouver, B.C. Sole Agent for Lifting Jacks for Canada, F. H. Hopkins & Co., Montreal.

**PAGE FLAT SHEET REINFORCEMENT****LIES FLAT—COSTS LEAST TO LAY**

The modern reinforcement. Fifty per cent. stronger—700 per cent. more bond-contact—than rounds or squares. No internal strains in "forming." Lies flat without weighting. Saves 25 per cent. to 50 per cent. laying-cost.

**WIDELY USED**

PAGE FABRIC used in the J. R. Booth Plant at Ottawa; Anglo-Canadian Leather Plant at Huntsville; Chamblay Dam at Montreal; Harris Abattoir at Toronto; C. P. R. Yards at Brantford, and in many miles of street paving at Oakville, Windsor, Walkerville, Aylmer, and Sandwich.

**TWO SIZES**

PAGE FABRIC mesh for structural uses, and 6 in. x 12 in. mesh for roadway and bridge-floor work. FLAT SHEETS maximum 4 feet wide by car-length. Also in ROLLS, 4 feet wide, any length. SPECIAL MEASURES.

FREE SAMPLES and new illustrated booklet No. 5 (with tables) on request. WRITE for them TO-DAY.

## Fabrikoid For Car Upholstery

Fabrikoid gives to a car an aspect of elegance. For a combination of luxurious appearance, durability, and economy, Fabrikoid is the last word in passenger car upholstery.

Fabrikoid is a strong, closely-woven fabric, coated with a tough, elastic material that is impervious to water. It will not crack and peel like the ordinary so-called "all leather" upholstery. It comes in a number of different colors and shades and is grained to look like the finest leather.

It is a fact not generally known, that a great part of the upholstery materials marketed as "leather" are "splits"—the fleshy, spongy part of the hide—artificially coated and grained. That is why so much of the "leather" upholstery fails to give satisfactory service.

**Fabrikoid is guaranteed to be superior to the coated splits, in both appearance and durability—and it costs less.**

**Fabrikoid is ideal for car curtains.**

Let us send you a sample of Fabrikoid. Be your own judge as to its quality—and adaptability for passenger car service.

Write to-day for full information and sample. They will be sent upon request.

## One Testimonial Is Worth a Hundred Arguments

A short time ago, a high official of an important railroad said that he could not understand why any single-track road would consider any other system than the one (A P B) that he had installed on his road, as it was giving excellent satisfaction.

Since its introduction in 1911, twenty-one railroads have made A P B installations—a convincing fact that the Absolute Permissive Block is the preferred system.

### *Here are some of the reasons:*

Block for opposing movements is from SIDING to SIDING.

Block for following movements is from SIGNAL to SIGNAL.

Maximum protection at meeting and passing points.

Reduction of more than 30 per cent in the minimum distance between following trains running under clear signals.

The display of a caution indication for every stop indication.

Flagging reduced to a minimum.

Signals afford a check on dispatchers' orders; also serve as a reminder at scheduled meeting and passing points.

Owing to the protection against opposing trains, so-called "tonnage signals" may be used

on ascending grades, so as to eliminate the stopping of tonnage trains on grades where it would be difficult to start them.

Signals are restored to normal position as soon as block is clear, regardless of any sequence of movements.

Flexibility in providing for:

(a) Special conditions such as the overlap, intermediate switches, future extensions or enlargements.

(b) Absolute or permissive blocking for following movements, depending only upon the signal aspects and rules.

Minimum number of signal appliances required.

Minimum number of line wires required.

*"Safety First"*

OF CANADA LIMITED

Office and Works, Lachine, Quebec

Branch Office, Winnipeg, Manitoba

Why employ 20 to 40 men to handle your material? A

## BROWNHOIST Locomotive Crane

will do the same amount of work with a decided saving to you. Its cost, including 6% interest on investment, depreciation, and operating costs, is only \$6.00 to \$10.00 per day. It is one man operated, powerful, quick-acting, and built to withstand hard and continuous service. Records prove this.

**ADAPTABILITY.** The equipment is interchangeable. It only takes a short time to apply the Grab Bucket, Bottom Block, Drag-Line Bucket, Pile Driving Attachment, Lifting Magnet, or Shovel Equipment. This makes practically six machines in one.

**RAILROADS** all over the country are realizing more and more the advantage and economy of having a Brownhoist Locomotive Crane on the job, because it is always ready to work in case of emergency. A Brownhoist Crane can be relied upon. One road uses thirty of them.

INVESTIGATE TO-DAY. Catalogue I shows  
how and where some of these cranes are used.

## The No. 25 McLain Pressed Steel Headlight

is equipped with triple nickel-plated polished reflector of special parabolic design which centralizes the rays of a concentrated filament Mazda bulb perfectly focused, throwing a straight, strong beam of light down the track, far ahead of the car.

Extremely light—weighing three pounds less than any other Headlight.

No sacrifice has been made to attain this lightness of weight for the McLAIN No. 25 is as strong as any Headlight made, and has an illuminating power in excess of other Headlights employing an incandescent globe.

Has extended dash—Dust and waterproof.

Guaranteed to give good service.

Write for booklet and prices.

Canton, Ohio

## Canadian Baldwin Electric Trucks

### INTERURBAN SERVICE

Canadian Baldwin Trucks, Class 84-30-AA, built for Lake Erie and Northern Ry., Ontario.

The truck illustrated is designed for high speed on electric railways, and has a rated carrying capacity of 30,000 pounds on the centre plate.

It has frictional side bearings and is of the equalized pedestal type.

Canadian Baldwin trucks, solve the problem of minimum weight, economical maintenance, simple construction, noiseless operation and easy riding.

There is comfort in riding on roads where Canadian Baldwin Trucks are used.

*Manufactured in Canada by*

**Canadian Locomotive Company, Limited**  
KINGSTON, ONTARIO

# A Standard Design With O-B Improvements

## Type E High-Speed Trolley Frog

Made along the general lines of the standard Dunne or Detroit design, but equipped with 6 inch renewable bronze Cam Tips. These tips in shorter length have proved a decided success on Type D Frog and other devices.

Body is made of malleable iron and is provided with extra long extensions to steady the trolley wheel and relieve wires of side wear.

A groove in the pan guides the wheel and overcomes tendency to take turnout when car is passing on a straight line.

Deflector bar prevents wild trolley from catching in the acute angle formed by the turnout wire.

Small number of parts and rugged design mean ease of installation and long life.

Furnished for 0 to 4-0 Round and Grooved wires and for either right hand, left hand or "V" turnout.

**THE OHIO BRASS COMPANY, Mansfield, Ohio, U.S.A.**

# Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE — INTERCOLONIAL RAILWAY.

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders, 23½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

## Garlock High Pressure Piston Rod Packing

Is built up in rectangular form and uniform shape and exact sizes are thereby obtained.

Asbestos packing, which is rolled around a rubber core and afterwards distorted by running through a square die, does not retain its shape or size.

The best materials we can buy are used in the manufacture of our high pressure packing.

The length of service obtained from it is greater than that secured from other makes, therefore the labor cost of applying and adjusting is less.

Our packings are sold at net weights; weights of tubes and boxes are not included.

Every pound of our high pressure packing carries with it the Garlock guarantee of satisfactory and economical service.

We will promptly replace or refund the cost of any of our packings which may prove unsatisfactory to our customers.

# Efficient Files

When better files are possible they will still bear these famous names

**KEARNEY & FOOT  
GREAT WESTERN  
AMERICAN  
ARCADE  
GLOBE**

**MADE IN CANADA**

For 50 years we've made files only. To-day we make sixty million each year. From raw steel to finished file we supervise every step.

When any improvement is possible you'll find it first in the "Famous Five."

To cut filing cost—replace all half-worn files. At that point they lose efficiency. They require more time and more effort to remove less stock less accurately. You save money by using more files.

What you save in time, labor and money more than pays for the extra files.

## 450 Railroad Shops in the United States and Canada Use Thermit

This comprises practically all the shops of importance in North America, and it can be said without exaggeration that the list of railroads using Thermit includes practically every system from the small road having only three or four locomotives to the largest system in the world having many thousand locomotives.

If by any chance your shop is not using Thermit, you should investigate the process and see how effectively and economically it will handle the many repairs on locomotive frames and other sections.

Remember that the greatest railway systems in the world use hundreds of thousands of pounds of Thermit. They do not use it for any reason except that it "delivers the goods" and has proven itself a profitable investment.

Let us mail you our new pamphlet, No. 2144, which contains full information on Thermit in Railroad Shops.

All Thermit materials and appliances are manufactured in the United States and Canada

# HOW RAILROADS SAVE MONEY BY USING THE TATE FLEXIBLE STAYBOLT

## TIME HAS DEMONSTRATED

FIRST—That flexible staybolts produce more satisfactory and more economical results than rigid staybolts.

SECOND—That TATE FLEXIBLE STAYBOLTS are best of all, measured by every standard.

## Scientific Treatment of Boiler Waters Dearborn Service to Railroads

Every time an engine failure takes place it means a large expense in dollars to the railroad company in time lost, impairment of service, and cost to send another engine to the rescue. Every time a locomotive goes to shop for repairs, it represents many thousands of dollars invested capital which is earning no revenue.

By the use of Dearborn Treatment engine failures due to the boiler foaming or leaking can be entirely eliminated. Dearborn Treatment counteracts the foaming tendency in waters of that type, and prevents scale formation, and the corrosive and pitting action that results in leaks. By thus overcoming the bad effects of the waters used, and

keeping the boiler tubes and sheets free from incrustation, the engine may be kept in service longer between boiler washings, and the period between shoppings for repairs of this character will be much longer. There are also great savings in fuel and lubricating oil, and the engine will always be in condition to haul full tonnage.

DEARBORN CHEMICAL COMPANY OF CANADA, Limited  
Office and Works: 1220-1230 Dundas Street, Toronto, Canada

## Rice Lewis & Sons, Ltd.

TORONTO, CANADA.

DESIGNED ESPECIALLY to handle pipes spaced closely as in coil work. No. 2 1/2 wrench illustrated requires but three-quarter inch space between pipes.

POSITIVE GRIP instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

RATCHET-LIKE ACTION. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

CAN'T CHEW. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

CAN'T CRUSH. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

# Thor Reversible, Pneumatic, Wood-Boring Machines

# Fire Tube Marine Superheater--Eight Reasons Why

1. It is adaptable to either new or existing boilers of the fire tube type, and can be applied with no change in design or construction.
2. It renders possible an increase in output of boiler horse power from a given boiler plant 10% to 20%.
3. It will produce the same power output with fewer boilers.
4. It reduces the size of the bunkers, thereby reducing the draft of the vessel with a given cargo, or making possible an increase in revenue cargo.

5. It results in a saving of fuel over saturated plants, both operating under the same draft conditions, of 10% to 20%.
6. It reduces the maintenance costs by the prevention of water hammer, leaky flanges, and condensation in the cylinders.
7. It does not prevent rapid, thorough, and frequent cleaning of the tubes.
8. Its construction provides easy access to all screwed joints and the easy removal of the parts.

## A Clear Track To Promotion

How to get off the side-track—how to break the couplings that hold them near the bottom of the pay roll—is the one big problem that troubles most railroaders.

There's a clear track to promotion—without grade or curve—open to the man that has the backbone and grit to take it. Before you can travel this track to promotion and bigger pay you must "coal up" with knowledge—you must be specially trained.

The Railway Instruction Department of the International Correspondence Schools is able and ready to give you the training you must have. You can get it right at home without losing an hour's time from your present job.

It will not cost anything to find out how the I.C.S. can train you for a better job. Put an "X" near the class of work you would like to follow, in the attached coupon, and mail it to the I.C.S. This won't obligate you in the least. It will simply bring full information by return mail.

## Mark the Coupon NOW

## Canadian Northern Bridges Over the Carp, Mississippi and Ottawa Rivers and Stoney Creek.

On the Canadian Northern Ry.'s main transcontinental line, about 35 miles west of Ottawa, are four closely located bridges. The first bridge, over the Carp River, consists of two 75 ft. half through girder spans with a 200 ft. truss span between them. The next crossing, the Mississippi River, is of two 75 ft. half through and a

girder span was first erected, then the bottom chords and floor system of the truss span were placed in position as fast as the falsework was built. The trusses were erected by a locomotive crane after the floor system was completed. An air hammer was used for driving the piles, air being supplied by a steam compressor, which was also used

each, and were erected by using a gallows frame, in connection with the 50 ton locomotive crane.

Piles were driven at Stoney Creek, on which a temporary track was constructed, and the girders carried into place from a side track by the locomotive crane. These girders weighed about 25 tons each. This

Carp River Bridge.

121½ ft. half through girder span, between the two 75 ft. spans. A mile farther down is the Stoney Creek bridge, which had three 85 ft. half through girder spans. The fourth is a long crossing over the Chats Rapids of the Ottawa River, and is made up of 10 deck girder spans, including 5 plate girder spans each 115 ft. long, 2 of 121½ ft.,

for driving rivets. This bridge was completed so that the construction trains crossed on July 16, 1914, and track laying was started to the Mississippi bridge and completed so as to allow erection of that bridge to start on Aug. 1, 1914.

A camp was established at this point and maintained until the erection work was

bridge was completed on Sept. 5, 1914, but a serious delay occurred after this. About the time the track was laid to Chats Rapids, the grader's locomotive upset in a sink hole, and a very difficult job of rescuing it was accomplished by calling in the Terry & Tench Co.'s erecting plant. The compressor was set up, and the pile driver used to

Chats Rapids Bridge, Ottawa River.

Mississippi River Bridge.

one 200 ft. through rivetted truss and one 290 ft. through rivetted truss spans. The total weight of the bridges is about 2,800 tons.

The masonry foundations were all in at the time the superstructure contractor's men arrived on the job on June 20, 1914. The plant arrived a day later and at the Carp River, driving piles and building falsework started at once. The easterly

started at Chats Rapids, at which point a splendid camp for use through the winter was built, and the men were made as comfortable as they could be at home. The river bed at the Mississippi is rock, so that a temporary timber bent trestle was erected, which permitted running out the girders on the cars, from which they were unloaded into place. The centre girders of the Mississippi River Bridge weighed 52 tons

Stoney Creek Bridge, Placing Last Girder.

build a trestle across the sink hole. Then the big locomotive crane was used to pick up the locomotive and set it on the track. This caused a delay of three weeks, and threw the erection of the Chats Rapids Bridge long into the late autumn and winter.

Work was finally started at Chats Rapids on Sept. 16, 1914, and a 25 ton guy derrick, having an 88 ft. mast and a 75 ft. boom, was erected alongside the track, about 200

loads from the first or easterly span, where a sorting yard was established. The first span, 121 ft. deck girder, was built, by using the same method as at Moosejaw River. The next span was a 200 ft. through truss over deep water, running very swiftly, the bottom being rock with great boulders, making it very difficult to secure a safe footing for the piles. The piles used were 14 in. x 14 in. 50 to 60 ft. long, of British Columbia fir, with cast iron points. They were driven into the rock by the air hammer, sufficiently to get a good bearing. In addition to the deep water and swift current at this crossing, immense quantities of saw logs were constantly being floated down the river to mills at Hull, and other places, and it was necessary to keep watchmen day and night to protect falsework from destruction. On top of the falsework the bottom chords and floor systems of both the 200 and 290 ft. through spans were built, and the permanent track laid as the work advanced. From this track the trusses were erected by the use of the locomotive crane, the material being pushed in on cars by the railway locomotive from the sorting yard. The shop work on these trusses was such that on the 290 ft. span the end posts, which were erected last, did not even require a wedge to be driven in order to connect them to the top and bottom chords. As all of the girder spans in this bridge were of the deck type, without cover plates on the top chords, the greatest care had to be used in handling them. The work of erecting this bridge, which was 1,589 feet long, was completed on Jan. 16, 1915, the camp abandoned and the plant shipped away. The falsework and a large part of the erection equipment was shipped to Troy, N.Y., to be used in building the Congress St. Bridge, across the Hudson River.

The falsework timber used in the whole of the above work was British Columbia fir of the best quality, cut for the purpose. In addition about 200 piles were purchased locally. Throughout the whole work there was not a single serious accident, and the health of the men was splendid.

The contract for the fabrication and erection of the above work was let by Mackenzie, Mann and Co., to Canadian Allis-Chalmers Ltd., Toronto, who sublet the erection to the Terry & Tench Co. Inc. of New York. W. H. Grant, Manager of Construction, Mackenzie, Mann and Co., had general charge. C. T. Smith was Superintendent of the work for the Terry & Tench Co., and much credit is due him for the successful carrying out of the undertaking; Geo. Fisher was his assistant; Nicholas Dowd had charge of the locomotive crane. About 60 men were employed throughout the job, and were all hired locally. The contractors state that it would be difficult to get a better working force of men together. The weather in the summer was greatly in favor of the work but storms in the winter caused some delay.

**Concrete Ties.**—A correspondent enquires as to the reasons why concrete ties have not been a practical success. One of the main troubles is the disintegration of the concrete caused by vibration and pounding under traffic. Some of them have cracked and fractured. The weight, the cost, and the necessity (in most cases) of special fastenings are other unfavorable factors. Some ties have given good service, however. Concrete ties of various designs have been proposed, and several of these have been tried in the track, but only in small numbers, so that the aggregate number of such ties is very limited.—Engineering News.

## The Canadian Pacific Railway's Roll of Honor.

C. H. Buell, Staff Registrar and Secretary Pension Department, C.P.R., has issued two additional lists as given below, which are prefixed as follows:—

"Several thousand officers and employees of this company enlisted for active military duty with the Canadian Expeditionary Forces, and the majority of them are now in Europe, bravely battling for Canada and the Empire. As particulars of army reservists are not available, these lists of those who have given up their lives for their country, or been wounded in action, are necessarily incomplete, and do not therefore indicate fully the extent to which the company's officers and employees have participated in the great struggle."

### New Type of Enlarged Filling Hole for Locomotive Tender Tanks.

Among other notable features of interest incorporated in the design of the 15 heavy consolidation type locomotives built for the Canadian Government Railways recently, is the enlarged type of filling hole applied to the tender tank, which is shown in the accompanying illustration. It is seldom, if ever, possible to stop heavy freight trains within a predetermined area less than 4 ft. over or under that desired. The cause for this is apparent, and the ruling factor is invariably that known as "slack action," that is, the movement allowed by reason of the compression of draft rigging which in a 60 car train often exceeds 15 ft. This tends to gather at one end or the other and the recoil forces the train beyond any refined movement that may be desired.

Realizing conditions as above stated, it has been the practice on many roads to disconnect the locomotive from the train when taking water, as the manhole of the usual size only allows for a maximum length of travel for the standpipe or tank spout of 6 ft., or 3 ft., each way. By examining the accompanying illustration, it will be noted that a travel of 11 ft. is easily obtained from any usual design of standpipe or water tank spout. Furthermore these conditions are applicable to both sides of the tank and the design is such that it can be applied to any style of tank, large or small.

The construction details do not vary from those usually experienced, except that the cover is made in two sections of  $\frac{1}{4}$  in. steel plate resting directly on top of the  $\frac{3}{8}$  in. filling hole wrapper sheet, which is stiffened by a  $1\frac{1}{2}$  x  $\frac{3}{8}$  in. steel beading as shown, the latter being cut to clear the  $2\frac{1}{4}$  x  $2\frac{1}{4}$  in. hinge angles. The wrapper sheet extends 8 ins. above the water space top plate of tank and is formed with rounded ends so as to give a maximum inside opening  $15\frac{3}{8}$  ins. wide by  $80\frac{3}{8}$  ins. long. For this data we are indebted to A. W. Wheatley, Vice President & General Manager, Canadian Locomotive Co., the builders of the locomotives referred to above.

**American Railway Master Mechanics' Association.**—Following on the association's convention in June, 54 subjects were submitted to the members for letter ballot, and of this number one subject only has been rejected, viz., the recommendation that the locomotiveman's torch be made of steel tubing. Recommendations accepted covered the specification for steel axles, fire box steel, forging, cylinder castings and steel castings; inspection and testing of locomotive boilers; operation of brakes on locomotives and tenders handled dead in trains and offered in interchange; photometering headlights, rules for determining stresses in longitudinal barrel seams and patches, gusset braces and flat surfaces, and staybolts, radial stays, crown bar bolts, etc.; tinware; fuel economy; forging specifications, and boiler washing.

**The Churchill Basin Fish and Traction Co.,** which is a joint stock company registered in Saskatchewan, has been granted a license by the Dominion Government, to occupy for one year a strip of land 40 ft. wide from Big River to the Great Sandbar on the Beaver River, from the latter place to Ile a la Crosse, 125 miles; and from the Great Sandbar to Lac la Rouge, 100 miles. The license is renewable from year to year, and "generally use the said strips of land and the company may make roads thereon, for the ordinary purposes of a common carrier."

Enlarged Filling Hole for Tender Tanks.

# Poles Purchased Throughout Canada in 1914.

Reports received from 381 pole purchasers in Canada in 1914 were used as a basis for the statistics in this bulletin. These purchasers consisted of 17 steam railway companies, 209 telephone companies, and 3 telegraph companies, forming one group, and 29 electric railways and 132 electric light and power concerns forming another group.

pendent telephone lines. Their purchases are of necessity irregular, and have fallen off considerably in the last two or three years, sufficient telephone accommodation having been established. The purchases in 1914 showed a decrease of 47% from those of 1913, while the average price paid increased 11c.

Only nine kinds of wood were reported,

of these two woods have formed the greater part of the purchases in past years, in spite of the increasing scarcity of good material, especially in the case of the eastern tree.

The steam railway, telephone and telegraph group of purchasers bought 65.7% of the poles as compared with 87.8% in 1913. Their purchases in 1914 showed a decrease of 60.4% from those of 1913. The oak, hard pine, jack pine and chestnut poles were all purchased by these companies, which also reported the purchase of 442 treated poles. The electric railway, power and light companies bought 34.3% of the poles as compared with 12.2% in 1913. Their purchases showed a decided increase (49.2%) over 1913.

Over half the poles purchased in Canada in 1914 were under 26 ft. long, the two cedar species forming 97.9% of the total in this class. These two kinds of wood formed over 95% in every length class recorded. Almost a quarter of the total number belonged to the next length class, including poles from 26 to 30 ft. long. The greater part of the white cedar, red cedar, spruce, tamarack and chestnut poles and all the jack pine poles belonged to the 20-25 ft. class. Oak poles were mostly from 31-35 ft. long. The greatest number of Douglas fir poles were over 41 ft. long and all the imported hard pine poles were of this same class.

The foregoing bulletin was prepared by the Interior Department's Forestry Branch, of which R. H. Campbell is Director.

**Forest Fires along Hudson Bay Ry.**—The Conservation Commission announces that large areas of forest have been destroyed this year by fires which have occurred along the Hudson Bay Ry. under construction by the Dominion Government between Pas and Port Nelson, Man. It is estimated that the burned area is not less than 500,000 acres, and the destruction of forest values about \$250,000, in addition to the loss of game and fur bearing animals, as well as railway contractors' supplies. The Forestry Department has attempted to prevent fires over this section, but with only partial effect, owing, it states, to the defective condition of fire protective appliances on locomotives, and to carelessness or negligence on the part of sub-contractors and unemployed laborers tramping along the line.

**The Master Car Builders' Association** has accepted the committees' recommendation on 86 of the 91 subjects submitted for letter ballot after the convention in June. The recommendations adopted cover brake beams, train brake and signal equipment, draft gear of existing wooden cars, specifications and tests of materials, train lighting, car trucks, etc. The rejected subjects were the height of platform buffer for passenger cars, conductors' valves, specification for construction of wooden side doors, emergency dynamo fuses on axle equipment on wooden cars, and desirability of having standards for limiting dimensions for truck sides with pedestal type jaw.

**The Central Railway and Engineering Club of Canada**, which has its headquarters at Toronto, has decided to suspend operation at least until after the war, principally on account of the lack of interest which has been taken in its proceedings of late, and also owing to the want of funds. Unlike the Canadian Railway Club, of Montreal, and the Western Canada Railway Club, of Winnipeg, the Central Railway and Engineering Club was not a purely railway club, in fact, railway men were probably in a considerable minority in its membership.

\* Less than one tenth of one per cent.

That the market in Canada for wooden poles is very irregular is demonstrated by the following figures showing numbers purchased in the past five years:—1910, 782,841; 1911, 585,703; 1912, 608,556; 1913, 534,982; 1914, 283,184. The activity of the different railways in extending their lines is one factor that affects these figures. Some of the provincial governments which control telephone companies purchase large stocks of poles and furnish these to small inde-

pendent telephone lines. Their purchases are of necessity irregular, and have fallen off considerably in the last two or three years, sufficient telephone accommodation having been established. The purchases in 1914 showed a decrease of 47% from those of 1913, while the average price paid increased 11c. Only nine kinds of wood were reported,

# Railway Mechanical Methods and Devices.

## Drilling Cotter Holes in Pins at Michigan Central Railroad Shops.

The jig shown in the accompanying illustration, with its auxiliary bushings, is in use in the Michigan Central Rd. locomotive shops, St. Thomas, Ont., for drilling cotter holes in the ends of such pins as are held in place by cotters. It is very simple in

Drilling Cotter Holes in Pins.

design, and because of a simplicity of action is very rapid in turning out work. The jig consists of a forged base, machined all over. In the upper face there is a V block, bridged over top by a bar into which drill jig bushings of different diameters as required may be screwed. The pins to be drilled are set in this V block, and located longitudinally by the locating gauge in the foreground, against which the head of the pin is bearing. This locating gauge is held to the jig base by a bolt shown on the right, adjustment of the gauge being possible through the slot in the gauge. On the left end of the base there is a small vertical air cylinder,

## Milling Slots in Crown Stays in Grand Trunk Railway Shops.

A simple jig for milling slots in crown stays is shown in the accompanying illustration, which shows the jig used in the G.T.R. shops, Stratford, Ont. It consists of a simple forged base, which can be bolted to the milling machine table. The upper face

Jig for Holding Crown Stays for Slotting.

of the base is grooved to receive the crown stays to be slotted, straddling which there is a holding on strip, secured by two nuts, one of which is plain, and the other a handle nut, the plain nut being run on by hand, the final tightening being by hand. The milling cutter is run on the head of the stay from the right.

## Cutting Crosshead Keyways in Piston Rods at Michigan Central Rd. Shops.

The method followed in the M.C.R. locomotive shops, St. Thomas, Ont., for cutting

Cutting Crosshead Keyways in Piston Rods.

attached to the rear end of a fulcrum arm, pivoted beside the V block, the short arm of which bears down on the pin when the air is turned on. This provides a quick and ready method of securing the work while drilling.

**Pere Marquette Rd.**—The date on which the sale of this railway is to take place has been postponed to Dec. 6.

crosshead keyways in piston rods, is shown in the accompanying illustration. In the rod as it comes turned from the lathe, a drill hole is made through the crosshead end, at the end of where the keyway is to be located. The rod is then mounted in the vise on a milling machine table, and clamped down, with the drilled hole parallel to the table. A spiral milling cutter of diameter exactly the same as the thickness

of the keyway is placed in the milling machine spindle and the work lined up. The table with rod is run across so that the cutter projects through the drilled hole on the far side, where the cutter is supported by the milling arm. The feed of the machine carries the rod along the desired length of the keyway, forming it complete in one pass. The entire time for milling the keyway, including the setting up, is under 12 mins.

## Heavy Boring Bar Head at Grand Trunk Railway Shops.

A heavy boring bar head which has a quick adjustment of the cutting tools is in use in the G.T.R. shops, Stratford, Ont. A front and side view of the head is shown in the accompanying illustration. In general appearance it resembles the usual boring bar head, consisting of a cast iron ring, with three projecting arms, slotted radially to receive the tools. These tools are held in place by a square ended eye bolt, with a nut on the reverse side. The principal

Heavy Boring Bar Head with Tool Adjustment.

point of value in the head is the tool adjustment feature, which consists of a small radial screw bearing up under the base of each tool. Each of these adjustment screws has 4 radial holes for turning pins, by means of which the screw may be turned, forcing the tool out to its required cutting position. This head is used on the heavy boring bar of the horizontal boring mill, wherein the work is carried along on the

the bar having no longitudinal motion. It might equally well be adapted to the movable head such as is commonly used on the lathe.

### Portable Cylinder Boring Machine.

W. S. Bazole, Master Mechanic, Rapid Transit Subway Construction Co., New York, has favored Canadian Railway and Marine World with the accompanying illustration of a cylinder boring machine, or what is

Portable Cylinder Boring Machine.

known as a boring bar, for use in the field. The photograph practically explains itself. For the motive power, Mr. Bazole used a small air boring machine by placing a small gear on the piston of the air drill.

### Wheel Mounting and Checking Gauge for Canadian Northern Railway.

The standard M.C.B. wheel mounting and checking gauge illustrated herewith has been developed by the Canadian Northern Ry. mechanical department for use in its shops, to replace the one piece gauges commonly used. It consists of a cross bar to which contour gauges are secured by  $\frac{3}{8}$  in. bolts, which makes it much easier to manufacture and replace if anything happens to one end of the gauge. The end pieces are milled out in batches, and are readily attached to the bar. It is being supplied to all the shops on the system.

M.C.B. Wheel Mounting and Checking Gauge.

### Repairs on Bridge Bearing Box.

One of the difficulties encountered in the operation of drawbridge no. 6, at Sault Ste. Marie, Mich., supervised and maintained by the Duluth, South Shore and Atlantic Ry., was in the rapid wear of the bolts on the main driving pinion bearing box. The bridge was constructed in 1884, and to say the least, bridge designing has been considerably improved since that date. As shown in the accompanying illustration, the bearing-cap and the brass were held in position by the use of 4 1 in. bolts. The shafting being  $3\frac{1}{2}$  ins. diam., bolts of 1 in. diam. were repeatedly found to be too light for the service. The trouble has been remedied by re-boring the bolt holes to suit  $1\frac{1}{4}$  in.

bolts, the bearing casting being sufficiently large to admit of the increase in the size of the holes. Two holes were also drilled and tapped in the angle-plate at each end of the bearing for 1 in. set screws, to aid in preventing any side motion of the bearing. The work was done before the opening of navigation this year, and during the period that has elapsed since that time no trouble has been experienced with the bearing, and will not likely be for a long period of time.

Details of Bridge Bearing Box.

—J. G. Hoppell, Electrical Superintendent of Bridges, Canadian Pacific Ry., Sault Ste. Marie, in Railway and Locomotive Engineering.

### Drill Holder.

A holder for drills and similar tools must meet the following conditions in order to be satisfactory: First, it must be easy to inspect all of the drills if several are held in the same compartment. Second, it must be easy to pick out either one or all of the drills held in a given compartment. Third,

the drills should lie straight in the holder. Fourth, it must be easy to pick up the drills. Drills are returned to the toolroom more or less greasy, and as a result they are likely to accumulate dust and dirt as well as to cause any wood with which they come in contact to become soaked with oil. Bearing these facts in mind, in addition to the detailed requirements which have already been outlined, the drill holder shown in the accompanying illustration was designed, in the term "designing" can properly be applied to the making of such a simple thing as a drill holder.

The shelf on which these drill holders are placed should slope forward in order that a clear view of the drills may be obtained; and a wide shelf containing sev-

eral rows of holders can be used, or a single row of holders may be placed on a narrow shelf, according to the requirements of different toolrooms. In connection with the accompanying illustration, it should be observed that the length of the holder does not necessarily have to be equal to the length of the drills. The holders are made of tinned sheet metal and each alternate section has turned over edges which are bent up tight over the edges of the inter-

Drill Holder made of Tinned Sheet Metal.

mediate sections. The joints can be soldered if it is desired to make a smoother or more permanent connection than it is possible to obtain by simply tightening the joint in a vise. The holders are fastened to the shelf by means of nails in the bottoms of the sections, one nail to a section being sufficient. A convenient method of forming the sections is to bend them over a piece of iron pipe of suitable size, if a machine for this purpose is not available.—R. S. Forststedt, in Machinery, New York.

### The Great Services of Railway Engineers.

Chas. D. Marx, in his presidential address at the American Society of Civil Engineers' annual meeting in San Francisco recently, said: "In railway engineering, think you that the men who through virgin forests and sandy deserts, through miasmatic swamps and rocky canyon, across rivers and over mountains, carried the steel bands that now tie mankind so closely together—think you that these men were engaged in an occupation likely to kill their ideals? When the final balance is struck, I warrant that the debit will not be on the side of this grand army of peace of the present, as compared with the armies of war of the past and present, for deeds of ideal heroism, self-sacrifice and devotion to duty. It seems like carrying coals to Newcastle to speak in an audience like this of what the railways have done for all countries—for our own country especially, and more particularly for the Pacific slope. It was not so long ago when I read of the beginning of construction of the Trans-Siberian Railway which now unites the Atlantic and the Pacific on the other continent. The Cape to Cairo Railway, too, has passed through the stages of its preliminary surveys and partial construction. What centuries of fighting could not accomplish these two roads will in time accomplish. The light of civilization will be spread on the Dark Continent. Who then is destructive of idealism? The man whose works are a means, if but a humble one, of bringing his fellow beings into a direct contact with the wonders of creation, or he who, enveloped in the mantle of exclusiveness, bemoans this defiling contact?"

C.P.R. Employees in Winnipeg have a Social Club with over 900 members. A proposition is under consideration for the erection before the winter season of 1916-17 of a permanent club building.

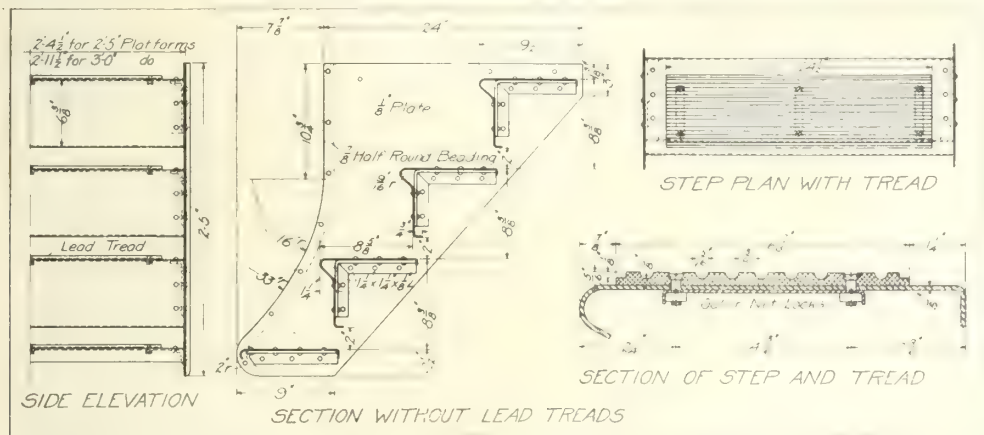

## Passenger Car Steps, Canadian Pacific and Grand Trunk Railways.

Both the C. P. R. and G. T. R. have designed for their new equipment, new passenger car steps, that embody some features of special interest, particularly as showing the advent of steel for all classes of work, to replace wooden construction, and also, in one case, an attempt to make a step that is more convenient for passengers entering and leaving the car.

**C. P. R. Steps.**—The new all steel steps of the C. P. R. were developed recently, and are illustrated herewith. They are being

the upper one of which is secured to the under side of the step above. The steps are of  $1\frac{1}{8}$  in. wood, 9 5-16 ins. deep, carried on  $1\frac{1}{2}$  by  $1\frac{1}{2}$  by 3-16 in. angle clips 7 ins. long, rivetted by  $\frac{1}{4}$  in. rivets to the end pieces, and on the top flange of the risers. To the angles, the steps are secured by  $\frac{1}{4}$  in. carriage bolts, and to the risers by no. 10 screws. The front edge of the step is protected by a half section of 1 in. pipe, secured to the wood by no. 10 screws. The tread surface of the step is a piece of 5-16 in.

Standard Four Tread Car Steps, Canadian Pacific Railway.

used on both the new steel and wooden passenger equipment. Two side plates of  $\frac{1}{8}$  in. sheet steel are protected along the outer edge by a band of  $\frac{7}{8}$  in. half round beading from top to bottom. The step and riser is made in one piece of  $\frac{1}{8}$  in. plate, flanged at both edges, and rounded with a 9-16 in. radius on the front edge of the step. This formed step is secured to the side members by a bent  $1\frac{1}{4}$  by  $1\frac{1}{4}$  by  $\frac{1}{8}$  in. angle at each end. These angles are spot welded to both step, riser and end pieces, in place of the former practice of rivetting. The steps are 23 inches wide, 73 inches deep in the clear, and with a rise of 83 inches. The treads are lead plates,  $24\frac{1}{2}$  by  $6\frac{7}{8}$  ins., and 5-16 in. thick, grooved on the surface, and secured to the step by 6 countersunk  $\frac{1}{4}$  in. bolts, the nuts of which are locked under the step by 2 bolt nut locks.

knob rubber. Each step is 2 ft.  $8\frac{1}{8}$  ins. wide, with a tread depth in the clear of 7 9-16 ins., with a rise at each step of  $9\frac{1}{4}$  ins. The steps are secured to the car body by 2 by 2 by  $\frac{1}{4}$  in. angles and  $\frac{1}{2}$  in. bolts.

Standard Four Tread Passenger Car Steps, Grand Trunk Railway.

**G. T. R. Steps.**—The new steel frame step in use on the G. T. R., which is illustrated herewith, has been made standard on the system. The special point about it, apart from its all steel frame construction, is the fact that the usual 3 treads have been replaced by a 4 tread arrangement, making unnecessary the use of the stepping boxes on entering and leaving the car. The standard step formerly in use on the G. T. R. was the same as that in use on standard sleeping cars, which also use the stepping box; but the latter has been found to be dangerous, owing to its small size and the distance from the lower step to it, the passengers sometimes stepping on the box edge, causing it to turn over, frequently resulting in injury. With this four tread arrangement, it is now possible to step from the platform to the lower tread without difficulty, as it is only 145 inches from the rail level to the lower step.

The construction is simple. The sides consist of two  $\frac{1}{8}$  in. plates, the outer edges of which are protected with a slit pipe,  $\frac{7}{8}$  in. diam., fitting over the plate edge. The risers of the steps are of similar stock to the end pieces,  $\frac{1}{8}$  in. pressed sheet steel, with end flanges for rivetting to the end pieces, and with top and bottom flanges,

The American Society of Mechanical Engineers' annual meeting will be held at New York, Dec. 8 to 10. The railway meeting will take place on Dec. 8, when papers will be presented dealing with the operation of parallel and radial axles of a locomotive by a set of single cylinders, and with four-wheel trucks for passenger cars, and possibly one on six-wheel trucks for passenger cars.

## Bridge Repairs on Canadian Pacific Railway.

In draw bridges which are in service since 1887 the end jacks and the jack pins are practically worn out and the pin seats are worn oval about  $\frac{1}{4}$  in. The new pins were made  $\frac{1}{4}$  in. larger in diameter and a suitable reamer was secured to ream out the pin holes, to take the new pins.

The accompanying illustration shows the arrangement whereby the reaming was done. The reamer was fitted on a mandrel

of suitable length and suitable cast iron bearings were provided to steady the mandrel, and three equidistant radial holes were drilled to turn the mandrel with a bar, and a ratchet was inserted on the other end to feed the reamer. The holes to be reamed were 3 x  $2\frac{1}{2}$  ins., and 4 holes in all, which were done by 3 men in 3 days' time. Two men were working on the reamer and the third man was watching

for trains, and when they were in sight he signaled and the reamers were taken out of the cut, because there was severe rattling when the train was going over the bridge which might have broken the reamer. The average number of trains was one an hour. J. G. Koppell, Electrical Superintendent of Bridges, Canadian Pacific Ry., Sault Ste. Marie, Ont., in Railway and Locomotive Engineering.

# Orders by the Board of Railway Commissioners for Canada.

Published with June 1914, Canadian Railway Commission Report. It is published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have ordered our paper have a continuous record of the Board's proceedings. No other paper has done this.

Orders are given of orders, immediately following the summary, are those on which the orders were drawn.

24325. Oct. 18.—Relieving G.T. Pacific Branch Lines Co. from erecting fences, gates and cattle guards on the Alberta Coal Branch, mileage 0 to 33.6, Sask., from mileage 0 to 1.12 to be a temporary exemption.

24326. Oct. 18.—Authorizing C.P.R. to operate bridge 100.4, Portal Section, B.C.

24327. Oct. 18.—Amending order 11462, Aug. 27, 1910, re Canadian Northern Ontario Ry. crossing of Front St., Trenton, Ont.

24328. Oct. 18.—Ordering that interlocker where G.T.R. crosses Main St., at intersection of Ferguson Ave., Hamilton, Ont., be operated by day and night watchmen, G.T.R., as agent for Hamilton, Grimsby and Beamsville Electric Ry., to appoint watchmen, their wages to be paid equally by City of Hamilton, G.T.R., and Hamilton, Grimsby and Beamsville Electric Ry.

24329. Oct. 18.—Relieving Grand Trunk Pacific Branch Lines Co. from maintaining fences, gates and cattle guards on its Outknife Branch, mileage 0 to 33.6, Sask., from mileage 0 to 1.12 to be a temporary exemption.

24330. Oct. 18.—Extending, to Nov. 30, time within which C.P.R. shall install bell at Eglinton Ave., York Tp., Ont.

24331. Oct. 18.—Authorizing Canadian Northern Ry. to build siding across public road between Lot 35, Con. 3, Markham Tp., and Lot 1, Con. 3, Whitchurch Tp., Ont.

24332. Oct. 18.—Ordering C.P.R. to rebuild bridge at Notre Dame St., St. Pie, Que., with span to provide 20 ft. clear roadway, with room back of supports for sidewalks, to be completed by Dec. 31.

24333. Oct. 18.—Authorizing G.T.R. to rebuild bridge 52 over public road between Cons. 9 and 10, Hope Tp., Ont.

24334. Oct. 18.—Authorizing Canadian Northern Ry. to open for traffic its line between Grand Marais and Birds Hill, Man., 50 miles.

24335. Oct. 18.—Approving location and details of G.T.R. proposed station at Stoney Creek, Ont., building to be ready for occupation by Dec. 1.

24336. Oct. 19.—Approving proposed change in location of G.T.R. siding for Toronto-Hamilton Highway Commission, near Oakville, Ont.

24337. Oct. 19.—Authorizing C.P.R. to build spur across Lyons St., Vernon, B.C.

24338. Oct. 18.—Amending orders 10749, 16005, and 19564, May 10, 1910; Feb. 16, 1912, and June 11, 1913, respectively, re G.T.R. crossing of Hurontario St., Port Credit, Ont., to provide that 20% required to be contributed by Toronto Tp. toward maintaining watchmen there, be paid half by Toronto Tp. and half by Port Credit, Ont.

24339. Oct. 19.—Authorizing Village of St. Isidore d'Auckland, Que., to close existing crossing, to divert highway along west side of Maine Central Rd., to connect with range road, and to build highway crossing at intersection of four roads, crossing Maine Central Rd. at right angles, and connecting diverted road along railway, village to pay cost of diversion, and Maine Central Rd. cost of building crossing.

24340. Oct. 19.—Dismissing N. K. Luxton's complaint on behalf of livery and hotel busmen at Banff, Alta., for hearing of Board to deal with station platform privileges on C.P.R. there.

24341. Oct. 18.—Approving Bell Telephone Co. agreement with Fingal Telephone Co., Sept. 23.

24342. Oct. 18.—Approving Edmonton, Dunvegan and British Columbia Ry. Standard Sleeping and Parlor Car Tariff, C.R.C. no. S-1.

24343. Oct. 19.—Ordering G.T.R. to install gates at crossing of highway immediately west of Lorne Park station, Ont., to be operated by day and night watchmen; 20% of cost of installing gates to be paid out of railway grade

crossing fund, 60% by G.T.R., and 20% by Toronto Tp.; 20% cost of maintenance to be paid by G.T.R., and 50% by Toronto Tp.

24344. Oct. 19.—Relieving C.P.R. and Morrissey, Fernie and Michel Ry. from maintaining night signalman to operate interlocking plant at Fernie, B.C.; home signals and derrails to be set clear for C.P.R.; key of tower to be left in C.P.R. custody; all signals and derrails on Morrissey, Fernie and Michel Ry. to be set at stop.

24345. Oct. 19.—Extending, for one month from date, time within which Toronto Suburban Ry. may cross, temporarily, for construction purposes only, C.P.R. main line track near Guelph, Ont., between 6.30 a.m. and 6.30 p.m.

24346. Oct. 20.—Recommending to Governor in Council for sanction, Edmonton, Dunvegan and British Columbia Ry. operating rules and regulations.

24347. Oct. 20.—Ordering that C.P.R., G.T.R., and C.N. Ontario Ry. pay to City of Toronto their proportions of expense incurred to date on work of high level bridge over Don Improvement and over their respective railways at Queen St. East, Toronto, upon receipts monthly of certified progress estimates showing amount expended thereon until completed.

24348. Oct. 20.—Approving Bell Telephone Co. agreement with McKillop, Logan and Hibbert Telephone Co., Oct. 7.

24349. Oct. 21.—Authorizing City of Toronto to build foot subway at Ashdale Ave., under G.T.R.; subway to provide for laying of five tracks.

24350. Oct. 21.—Extending, to Dec. 1, time within which G.T.R. shall install gates at Barton St., Barton Tp., Ont.

24351. Oct. 21.—Authorizing C.P.R. to take certain lands at Conquest, Man., for extending station grounds, sites for elevators and other structures, and for accommodation of traffic.

24352. Oct. 22.—Extending, to Nov. 10, time within which G.T.R. shall install derail at siding at Killaloe, Ont.

24353. Oct. 23.—Amending order 23950, July 7, re operation of G.T.R. siding across William St. and across and along Ontario St., Kingston, Ont.

24354. Oct. 22.—Approving Bell Telephone Co. agreement with Lake of Bays and Haliburton Telephone Co., Oct. 7.

24355. Oct. 22.—Approving Bell Telephone Co. agreement with Beeton Telephone Co., Oct. 13.

24356. Oct. 25.—Authorizing G.T. Pacific Branch Lines Co. to build spur from its Alberta Coal Branch across road allowance at mileage 3.8, North Alberta District.

24357. Oct. 25.—Approving Canadian Northern Ry. Standard Tariff of Sleeping and Parlor Car Tolls, C.R.C. nos. E S-2 and W S-8; and rescinding order 24307, Oct. 12.

24358. Oct. 25.—Approving Canadian Northern Express Co.'s Standard Tariff of Maximum Express Tolls, C.R.C. 834, to apply on the Mountain Division west of Tollerton, Alta.

24359. Oct. 25.—Authorizing Saskatchewan Board of Highway Commissioners to build highway crossing over east end of G.T. Pacific Branch Lines Co.'s station grounds at Dewar Lake, Sask.

24360. Oct. 21.—Ordering Canadian Northern Ry. to fence north side of right of way from Vita to Caliento, Man., by May 1, 1916.

24361. Oct. 23.—Ordering C.P.R., within 60 days, to install improved type of automatic bell at crossing of public road 950 ft. west of Nerepis station, N.B.

24362. Oct. 23.—Relieving C.P.R. from providing further protection at crossing of Dundas St., just east of Cooksville station, Ont.

24363. Oct. 26.—Authorizing C.P.R. to build spur for Dominion Government terminal elevator at Calgary, Alta.

24364. Oct. 26.—Authorizing G.T.R. to build siding for Russell Motor Car Co., Toronto.

24365. Oct. 26.—Authorizing C.P.R. to build spur for Halliday Bros., Winnipeg, Man.

24366. Oct. 26.—Approving revised location of G.T. Pacific Branch Lines Co.'s Biggar-Calgary Branch through s.e. ¼ Sec. 11, and n. ½ Sec. 2-35-17, w. 3 m., Sask.

24367. Oct. 26.—Extending, to Dec. 31, time within which G.T.R. shall complete siding for W. H. Banfield & Sons, Toronto, Ont., as authorized by order 23928.

24368. Oct. 27.—Dismissing C.P.R. application to remove station agent at New Dayton, Alta.

24369. Oct. 27.—Authorizing Sasman rural municipality 336, Sask., to build highway over Canadian Northern Ry. between Secs. 9 and 10-34-12, w. 2 m., Sask.

24370. Oct. 28.—Approving Bell Telephone Co. agreement with West Williams Rural Telephone Association, Oct. 18; and rescinding order 11236, July 19, 1910.

24371. Oct. 28.—Extending, to Nov. 15, time within which Montreal & Southern Counties Ry. shall install interlocking plant at crossing of C.P.R. on Lot 34, St. Paul d'Abbotsford Parish, Que., as required by order 24054, Aug. 9.

24372. Oct. 27.—Relieving G.T.R. from providing further protection at first crossing east of Findlay station, Ont.

24373. Oct. 28.—Amending order 24202, Sept. 20, re London and Port Stanley Ry. crossing of London St. Ry. on South St., London, Ont.

24374. Oct. 28.—Approving Bell Telephone Co. agreement with Nelson Telephone Co., Oct. 2; and rescinding order 7703, Aug. 5, 1909.

24375. Oct. 28.—Authorizing G.T.R. to rebuild bridge 112 over stream on Lot 12, Con. 6, Markham Tp., mileage 11.03 from Scarboro Jct., Ont.

24376. Oct. 28.—Approving Bell Telephone Co. agreement with The Peoples Telegraph & Telephone Co., Sept. 27; and rescinding order 11017, June 28, 1910.

24377. Oct. 21.—Authorizing British Columbia Electric Ry. to cross Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) proposed industrial tracks; to connect with same; to remove crossover between V. & E. R. existing tracks and C.P.R., and to rebuild same 125 ft. easterly; and to cross C.P.R., all on Front St., New Westminster.

24378. Oct. 28.—Authorizing Edmonton, Dunvegan & British Columbia Ry. to build bridge over Smoky River, Alta.

24379. Oct. 29.—Approving Michigan Central Rd. plans of proposed change in approach to station at Sheddin, Ont.

24380. Oct. 29.—Authorizing C.P.R. to stop trains 33 and 34 at Kemptville, Ont., and rescinding order 23671, May 8.

24381. Oct. 29.—Ordering Michigan Central Rd. to publish supplement to its tariff, C.R.C. 1743, embodying rule re minimum weight on traffic to its St. Clair Division. This order is given in full on another page.

24382. Oct. 30.—Authorizing G.T.R. to build siding for Canadian Explosives, Ltd., on part Lot 2, Beloeil Parish, Que.

24383. Nov. 3.—Authorizing Tate rural municipality 279, Sask., to open up highway crossing over G.T. Pacific Ry. north of Secs. 35 and 36-28-21, w. 2 m., G.T.P.R. to pay maintenance of crossing.

24384. Oct. 30.—Dismissing application of S. Marsh, Port Dover, Ont., for order directing Lake Erie & Northern Ry. to provide cattle pass on his farm in Woodhouse Tp., Ont.

24385. Oct. 28.—Amending order 23392, March 4, re perishable freight in heated cars. This order is given in full on another page.

24386. Oct. 25.—Relieving G.T. Pacific Ry. from erecting fences, gates, and cattleguards on certain portions of its main line, mileage 1,044 to 1,363, Winnipeg west.

24387. Nov. 2.—Extending, to May 22, 1916, time within which Lake Erie & Northern Ry. trains may be operated, for construction purposes only, over crossing of Toronto, Hamilton & Buffalo Ry. in Brantford, Ont.

24388. Nov. 2.—Authorizing C.P.R. to build siding in Ottawa, Ont., crossing Cumberland and Dalhousie Sts. at grade.

24389. Nov. 2.—Amending order 23857, June 14, re highway crossing of Canadian Northern Quebec Ry. on Lot 17, St. Joseph de Deschambault Parish.

24390. Nov. 3.—Extending, to Jan. 1, 1916, time within which C.P.R. shall file plans showing bridge to be rebuilt on Notre Dame St., St. Pie, Que.; work to be completed by May 31, 1916.

24391. Nov. 4.—Authorizing Saskatchewan Government to build highway crossing over C.P.R. Colonsay Branch north of n.e. ¼ Sec. 16-23-25, w. 2 m.

24392. Nov. 3.—Authorizing G.T.R. to build additional track across Ahrens St. and a public lane, in Berlin, Ont.

24393. Nov. 3.—Extending, to May 15, 1916 time within which G.T.R. shall complete highway over its track in Tay Tp., Ont.

24394. Nov. 3.—Authorizing Central Vermont Ry. to rebuild bridge 3, near St. Brigid station, Que.

24395. Nov. 2.—Approving Bell Telephone Co. agreement with Barton & Binbrook Telephone Co., Oct. 20; and rescinding order 6138, Jan. 31, 1909.

24396. Nov. 2.—Approving Canadian Northern Ry. revised location through Secs. 3, 4, and 5, Tp. 35, R. 7, w. 2 m., Sask., mileage 83.99 to 87.71.

24397. Nov. 3.—Ordering Canadian Northern Ry. to repay Loughboro Tp., Ont., \$5,000, being amount paid by the township in consideration of train service for passengers and freight from Sydenham making connection with trains at Harrowsmith every day in week, except Sunday. The full judgment in this matter was given in Canadian Railway and Marine World for Nov., pg. 425.

24398. Nov. 3.—Authorizing correction that Edmonton, Dunvegan and British Columbia Ry. plan should show width of station grounds in s.e. ¼ Sec. 12-62-27, w. 4 m. as 120 instead of 100 ft., and 180 instead of 200 ft.

24399. Nov. 5.—Authorizing C.P.R. to build sidings for M. J. O'Brien at mileage 69.2, Chalk River Subdivision.

24400. Nov. 4.—Dismissing complaint of A. H. Mayland, Calgary, Alta., against extra freight charged by C.P.R. on hogs to Moose Jaw, Sask.

24401. Nov. 5.—Relieving Canadian Northern Ry. from speed restriction of 15 miles an hour over its line from Blaine Lake to Denholm, Sask.

24402. Nov. 4.—Extending for 30 days from date time within which Toronto, Hamilton & Buffalo Ry. may re-arrange bents of timber trestle over Hamilton Radial Ry. at Sherman Inlet, Hamilton, Ont.

24403. Nov. 5.—Authorizing Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.), to cross Second and Third Sts., Tulameen, B.C., at grade, and build passing track, in addition to other lines; to open up lane 40 ft. wide through Block 2, east of Lots 9 and 14, and lane 20 ft. wide through Block 9, east of Lots 3 and 8.

24404, 24405. Nov. 5.—Authorizing Canadian Northern Ry. to open for traffic its line from Bienfait to Estevan, 9 miles, and from Elrose to Estevan, Sask., 35 miles.

24406 to 24408. Nov. 5.—Approving agreements between Bell Telephone Co. with Lanark & Carleton Counties Telephone Co., Oct. 29th; Rural Telephone Co. of Kitley, Sept. 30, and Bracebridge and Muskoka Lakes Telephone Co., Oct. 22.

24409. Nov. 5.—Authorizing Canadian Northern Ry. to build spur for Canadian Oil Co., Portage la Prairie, Man.

24410. Nov. 5.—Authorizing G.T.R. to build siding and spur therefrom for Maganetawan Tanning & Electric Co., Armour Tp., Ont.

24411. Nov. 5.—Authorizing C.P.R. to build siding for City of Toronto, crossing Mount Stephen St., and roadway east side River Don, at grade.

24412. Nov. 8.—Ordering British Columbia Electric Ry. to install improved type of automatic bell at crossing of Twelfth St., New Westminster, B.C., within 60 days from date, and to maintain bell; 20% of cost of installing bell to be paid out of railway grade crossing fund.

24413. Nov. 8.—Authorizing C.P.R. to build siding for A. Carriere at mileage 71.2, Quebec Subdivision.

24414. Nov. 8.—Authorizing City of Regina, Sask., to connect Regina Municipal Ry. with C.P.R. at intersection of Arcola Ave. and Atkinson St.

24415. Nov. 8.—Approving G.T.R. plan showing interchange tracks proposed to be built at Arnprior, Ont., between G.T.R. and C.P.R.; semaphore to be erected west of C.P.R. switch, at point indicated by C.P.R., at G.T.R. expense, and authorizing building of these tracks across certain streets, in Arnprior.

24416. Nov. 5.—Authorizing Canadian Northern Ontario Ry. to build interchange track for allowing transfer of cars to G.T.R. and vice versa, near Ottawa, Ont.

24417. Nov. 9.—Authorizing Lake Erie & Northern Ry. to erect trolley wire and transmission cable over G.T.R. at mileage 44.3, Woodhouse Tp., Ont.

24418. Nov. 8.—Ordering G.T.R. to divert Kingston Road, the cost of work to be paid, 20% out of railway grade crossing fund, not exceeding \$5,000; \$500 each by Brighton and Murray Tps.; and remainder by G.T.R.; and rescinding order 18447, Dec. 30, 1912.

24419. Nov. 6.—Relieving Canadian Northern Ry. from speed restriction of 25 miles an hour on its line between Saskatoon and Harris, Sask., mileage 0 to 49.4.

24420. Nov. 9.—Authorizing Saskatchewan Board Highway Commissioners to build highway over Canadian Northern Ry. in s.e. ¼ Sec. 34-33-11, w.2.m.

24421. Nov. 5.—Ordering that clause 2 of order 23187, Jan. 18, be struck out, and approving plans of proposed track connection and station facilities at Royston, B.C., for Esquimalt & Nanaimo Ry., and Canadian Collieries, Ltd.

24422. Nov. 8.—Rescinding order 19788, July 10, 1913, authorizing construction, maintenance and operation of spur for Silicate Brick Co., Ottawa, and authorizing G.T.R. to remove it and to discontinue its operation.

24423. Nov. 10.—Recommending to the Governor in Council for sanction, St. Lawrence & Adirondack Ry. lease to New York Central Rd., Sept. 27.

24424. Nov. 10.—Authorizing Waldeck rural municipality, Sask., to build overhead bridge over C.P.R. at road between Secs. 29 and 39-16-11, w.3.m., to be completed by Dec. 31.

24425. Nov. 10.—Relieving G.T.R. from providing further protection at Springhill crossing, King, Ont.

24426. Nov. 10.—Amending order 24142, Sept. 2, re C.P.R. location from Stony Creek to Rogers Pass Tunnel, B.C.

24427. Nov. 10.—Amending order 24392, Nov. 3, re G.T.R. additional crossing of Ahrens St., Berlin, Ont.

24428. Nov. 10.—Approving Central Canada Express Co.'s Standard Mileage Tariff of Maximum Tolls, C.R.C. 1.

24429. Nov. 10.—Approving Central Canada Express Co.'s bylaw, authorizing Peter McArthur to prepare and issue all tariffs of toll for carriage of express.

24430. Nov. 11.—Authorizing British Columbia Public Works Department to build level high-

way over Grand Trunk Pacific Ry. at mileage 88, close to mouth of Zimacord River.

24431. Nov. 10.—Ordering C.P.R. forthwith to floor pens leading to loading chutes, as well as large pen at rear of yard, at Provost, Alta., with old ties covered with cinders.

24432. Nov. 11.—Authorizing C.P.R. to build spur for Borden Condensed Milk Co., Ingersoll, Ont.

24433. Nov. 11.—Relieving Canadian Northern Ry. and C.P.R. from maintaining night signalman to operate interlocking plant in N. W. ¼ Sec. 13-2-8, w.2.m., Sask.

24434. Nov. 12.—Removing speed restriction of 15 miles an hour over Canadian Northern Ry. from mileage 30 to Gravelburg, Sask.

24435. Nov. 10.—Dismissing application of City of Ottawa, Ont., for authority to build double line of 51 in. steel water pipe under C.P.R. Broad St. yard.

24436. Nov. 11.—Authorizing C.P.R. to file tariff to provide for charging of special tolls for detention of cars containing western grain and grain products at Cartier, Ont., for more than 72 hours. This order is given in full on another page.

24437. Nov. 13.—Ordering C.P.R., G.T.R., Canadian Northern Ontario Ry. and Toronto Ry. to pay to City of Toronto their proportions of expense incurred to date on high level bridge over Don improvement and over their respective railways at Queen St. East, upon receipt of monthly certified progress estimate showing amount expended thereon until completed, and rescinding order 24347, Oct. 20.

24438. Nov. 9.—Authorizing Canadian Northern Ry. to connect with C.P.R. near Current River and at Arthur St., Port Arthur.

24439. Nov. 13.—Recommending to Governor in Council for sanction, Ottawa & New York Ry. lease to New York Central Rd., Sept. 27.

24440. Nov. 16.—Suspending, until further order C.P.R. Import Tariff, C.R.C. no. E-3060, from St. John and West St. John, N.B., and G.T.R. Import Tariff, C.R.C. no. E-3280, from Portland, Maine.

General order 153. Nov. 4.—Prescribing certain rules governing any future proposed new issue of the Canadian Freight Classification, or any proposed supplement to issue then current. This order is given in full on another page.

General order 154. Nov. 10.—Ordering that, pending revision of present Canadian Freight Classification, railway companies subject to Board's jurisdiction publish and file commodity tariffs, to apply between all points in Canada, covering cream or milk aerators, agitators, coolers, forewarmers, heaters, pasteurizers, separate or combined, loose or in skids. This order is given in full on another page.

General order 155. Nov. 15.—Ordering that railway companies publish and file amended tariffs showing toll not exceeding 75c for cleaning and disinfecting, or disinfecting any car in which live stock has been carried when work is done by companies. This order is given in full on another page.

## Progress of Rogers Pass Tunnel Construction, Canadian Pacific Railway.

The following table, for which we are indebted to J. G. Sullivan, M.Can.Soc.C.E., Chief Engineer, C.P.R., Winnipeg, shows the progress made from Sept. 30 to Oct. 28, also the total progress to Oct. 28:—

	Progress.	Total.
EAST END.		
Main heading .....	1,049 ft.	10,429 ft.
Main tunnel .....	669 ft.	7,247 ft.
WEST END.		
Main heading .....	1,109 ft.	11,129 ft.
Main tunnel .....	699 ft.	6,110 ft.

**Gross Operating Revenues for August on the large steam railways of the United States, according to the Bureau of Railway Economics, were \$1,191 a mile, an increase of \$17, or 1.3%, compared with Aug., 1914. Operating expenses were \$765, a decrease of \$23, or 3%. Net operating revenue, therefore, was \$426—an increase of \$40, or 10.2%, and operating income was \$375—an increase of \$39, or 11.4%. The gain was, however, to a large extent confined to the eastern and southern districts, the western gaining only 3.9% a mile. The operating ratio for the whole country was 64.2%, compared with 67.1% in Aug., 1914, and 68.8% in Aug., 1913. Considering the three main districts, the respective ratios for Aug., 1915, and Aug. 1914, were as follows:—Eastern, 63.6 and 67.3; southern, 67.6 and 74.1; western, 63.1 and 64.5.**

**Intercolonial Ry. employees have decided to donate a day's pay out of their November pay cheques to the Canadian Patriotic Fund.**

## Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, for Western Lines, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,206,100	\$921,000	\$285,100	x\$145,400
Aug.	1,192,800	954,000	238,800	x5,900
Sept.	2,014,600	1,358,900	661,600	1,300
	\$4,413,500	\$3,227,000	\$1,186,500	x\$79,300
Deer.	\$ 688,300	\$ 579,000	\$79,300	

A Decrease.  
Mileage in operation at Sept. 30, 1915, 4,965, against 4,670 at Sept. 30, 1914.

Commencing with October, the figures show the earnings of the entire system, both eastern and western lines.

	Gross Earnings	Expenses	Net Earnings	Increase
Oct.	\$3,678,500	\$2,421,500	\$1,257,000	\$ 537,800
	\$3,678,500	\$2,421,500	\$1,257,000	\$ 537,800
Incr.	\$1,100,200	\$ 562,400	\$ 537,800	

The mileage in operation during October, was 7,280, as compared with 6,886 miles in Oct., 1914.

Approximate earnings for three weeks ended Nov. 21, \$2,396,200 against \$1,571,000 for same period 1914.

## Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1914-15, from July 1, 1915:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$7,895,375.47	\$5,094,972.35	\$2,800,403.12	x\$978,042.71
Aug.	8,801,451.52	5,359,136.80	3,442,314.72	79,157.02
Sept.	1,273,165.45	557,864.81	4,475,000.44	678,052.25

\$26,069,992.44 \$16,981,973.96 \$10,088,013.48 x\$5,006,334.44

Approximate earnings for October, \$13,311,000, against \$9,152,000 for October, 1914, and for three weeks ended Nov. 21, \$9,010,000, against \$5,515,000 for same period, 1914.

## Grand Trunk Railway Earnings, Etc.

The following figures show the earnings for the G.T.R. (including the Canada Atlantic Ry.), the G.T.W.R. and the D.G.H. & M.R. for September, compared with those for September, 1914:

	1915.	1914.
Earnings .....	\$3,667,800	\$3,838,250
Expenses .....	2,501,100	2,858,900
Net earnings .....	\$1,176,700	\$ 979,350

	1915.	1914.
Earnings .....	\$ 669,900	\$ 611,450
Expenses .....	445,200	553,450

	1915.	1914.
Earnings .....	\$ 224,700	\$ 58,000
Expenses .....	192,150	223,750

Net earnings .....

Approximate earnings for October, \$4,666,591, against \$4,404,417 for Oct., 1914; and for three weeks ended Nov. 21, \$2,894,364, against \$2,609,224 for same period 1914.

## TRAFFIC RECEIPTS OF THE SYSTEM.

	1915	1914	Incr	Deer.
G.T.R. ....	\$33,045,502	\$35,540,802		\$2,495,300
G.T.W.R. ....	6,241,221	5,908,997	\$212,224	
D.G.H.&M.R. ....	2,272,020	2,107,531	164,489	
Totals. ....	\$41,558,743	\$43,647,330		2,088,587

## Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section, 916 miles, for October were \$973,582, against \$454,469 for Oct., 1914. The aggregate earnings for four months ended Oct. 31 were \$1,858,558, against \$1,667,542 for same period, 1914.

**The Glacier House, Glacier, B.C., which is operated by the Canadian Pacific Ry., closed Nov. 14 for the winter. The Mount Stephen House, Field, B.C., remains open all the year round.**

## Board of Railway Commissioners' Judgment on Baggage Rules.

Commissioner McLean, of the Board of Railway Commissioners, gave a decision recently on the proposed rules governing baggage car traffic in Canada, in which he pointed out that what was before the board was the question of the rules, not of rates, carried in baggage tariffs. Following is a summary of the judgment, which was concurred in by Sir Henry L. Drayton, Chief Commissioner; D'Arcy Scott, Assistant Chief Commissioner, and Commissioner Lindsay.

By order 195 of Oct. 17, 1904, wherein approval was given to various forms and regulations used by railway companies, included in which were the rules and regulations for the carriage of baggage. Questions having arisen as to the scope of certain of the rules the whole matter was taken up by the board. The railway companies prepared a revised form of the regulations, which were considered by boards of trade, commercial travellers' associations and other interested bodies throughout Canada, with the result that various amendments were agreed to. The regulations thus revised, and the information collected were then considered at informal conferences with the Board's officers, with the result that agreements were made on a number of matters, and incorporated in a revised proof. The unagreed upon matters were argued before the Board and the present judgment gives the Board's decision. The

matters involved are six in number, and are:

**1. Sample Baggage.** Rule 2, sub sec e. This deals with the question of pentagonal and other irregular shaped sample cases used by commercial travellers. The judgment points out that uniformity of rule, owing to the traffic back and forth between Canada and the United States is desirable, and therefore orders that the Trunk Line rule now adopted and in force in the United States, with the approval of the Interstate Commerce Commission, shall be adopted for Canada. This rule reads: "Trunks or other rigid containers with more than two bulging sides, or with two bulging sides that are not opposite each other, will not be accepted for transportation in regular baggage cars."

**2. Canoes.** Rule 10. The judgment holds that the draft rule providing that canoes not exceeding 18 ft. in length, when accompanied by sportsmen or campers to specified territory, do not form any part of the free baggage allowance, but may be carried in the baggage cars upon payment of charges in accordance with current tariff, is not an unreasonable one. The rule therefore is approved.

**3. Limited Liability** in regard to articles embraced in rules 5(a), 7, 9 and 10. Rule 11. This rule limits the liability of the companies to \$5 on any of the articles named in the four rules mentioned, unless a greater value is declared and extra charges paid at the time of checking in accordance with the carrier's current tariff, and is upheld by the judgment as being a reasonable one.

**4. Miscellaneous Articles.** Rule 12. This rule applies to the carrying as baggage of miscellaneous articles, such as tool chests, invalid's chairs, miner's packs, and so forth, which may be carried as baggage only upon condition that the carrying company is not liable for loss of or damage thereto. What the Board is concerned with, says the judgment, is, has it power to sanction the limitation, and is the limitation a reasonable one? The Board holds that the limitation is a reasonable one, and that it has, under the authority of Sec. 340 of the Railway Act, power to approve such limitations.

**5. Storage.** Rule 23 (d). This applies to the limitation of liability of the railway company as a carrier when the baggage is placed in storage. The judgment directs that the rule shall be rewarded as follows: "After the expiration of 24 hours from the receipt of such baggage or articles in storage, the carrier shall be liable as a warehouseman only."

**6. Baggage checked to other companies' lines.** Rule 26 (c). The proposed rule provided that the liability of carriers for loss of baggage or other articles checked shall cease so soon as it shall have been delivered to the next connecting carrier, but the judgment directs that a new rule shall be substituted making the original carrier, other than the Canadian Government Railways, liable for the loss or damage occasioned on the connecting line in Canada to which the baggage, etc., has been delivered, to the extent provided for in the rules, but gives to the original checking line the right to recover the amount of such loss or damage from the connecting company.

## Canadian Overseas Railway Construction Corps.

A nominal roll of officers, non-commissioned officers and men has been issued with militia orders. Following is the list of officers:

Name.	Former Corps.	Next of Kin.	Address of Next of Kin.	Country of Birth.	Taken on Strength.	
					Place.	Date.
Major..... Ramsey, Colin Worthington Pope.	Territorials.	Ramsey, Florence E.	Montreal .....	Canada..	Montreal .....	June 12, 1915
Major..... C. of G. .....	C. of G. .....	Hervey, Mrs. E. G.	Lancaster, Ont. ....	U.S.A....	Montreal .....	Mar. 23, 1915
Major..... Le Fevre, Alfred Tully .....	58th Regt. ....	Le Fevre, Mrs. G. .....	Lakefield, Ont. ....	Canada..	Montreal .....	Mar. 23, 1915
Major..... Reid, John Garnet .....	97th Regt. ....	Reid, Mrs. Annie M. ....	S. S. Marie, Ont. ....	Canada..	St. John .....	Mar. 17, 1915
Major..... Richardson, Bertram Poidevin. ....	S.A.C. ....	Ridgeway, Ethel M. ....	Montreal .....	England.	Montreal .....	Mar. 17, 1915
Captain..... Grant, LeRoy Fraser .....	C. of G. ....	Grant, Mrs. C. McL. ....	Vancouver .....	Canada..	St. John .....	Feb. 19, 1915
Captain..... Hillman, Daniel .....	Nil .....	Hillman, William J. ....	Clachan, Ont. ....	Canada..	Montreal .....	Mar. 27, 1915
Captain..... Pettman, Frank Ernest .....	Nil .....	Pettman, Mrs. A. ....	E. Wellington, B.C. ....	Canada..	St. John .....	Mar. 31, 1915
Captain..... Pope, John Henry .....	7th Hussars. ....	Pope, Florence E. ....	Calgary, Alta. ....	Canada..	Montreal .....	Mar. 17, 1915
Captain..... Wellwood, Henry .....	38th Regt. ....	Wellwood, Jessie E. ....	Milton West, Ont. ....	Canada..	St. John .....	Mar. 31, 1915
Lieutenant..... Connors, Francis Bernard .....	90th Regt. ....	Connors, Miss K. J. ....	Winnipeg .....	Canada..	St. John .....	Mar. 26, 1915
Lieutenant..... Duncan, Erskine .....	Territorials. ....	Duncan, Mrs. A. C. ....	Belfast, Ire. ....	Scotland.	Cornwall .....	Mar. 20, 1915
Lieutenant..... Flint, Charles .....	Nil .....	Flint, Mrs. E. A. ....	Winnipeg .....	Canada..	Calgary .....	Apr. 10, 1915
Vet. Lieutenant..... Heenan, James Havelock .....	Nil .....	Heenan, Mrs. D. C. ....	Roland, Man. ....	Canada..	Calgary .....	June 12, 1915
Lieut., Asst. Adjt. Lewis, Robert Percy .....	90th Regt. ....	Lewis, Mrs. Margt. ....	Winnipeg .....	England.	Winnipeg .....	Mar. 23, 1915
Lieutenant..... MacCrimmon, Henry James .....	Nil .....	MacCrimmon, Don. ....	Williamstown, Ont. ....	Canada..	Williamstown. ....	Mar. 20, 1915
Lieutenant..... Murray, Wm. Henry Douglas .....	58th Regt. ....	Murray, Mrs. M. W. ....	Bridge of Weir, Scot. ....	Scotland.	Montreal .....	Mar. 23, 1915
Lieutenant..... Ramsay, Kenneth Allan .....	R.M.C. ....	Bullen, Mrs. C. F. ....	Winnetka, Ill. ....	Canada..	St. John .....	June 7, 1915
Lieutenant..... Sherwood, Henry Lewis .....	R.M.C. ....	Allan, William A. ....	Ottawa .....	Canada..	Montreal .....	Mar. 18, 1915
Lieutenant..... Turbett, Eyre Anthony Weldon. ....	Imp. Forces. ....	Turbett, Mrs. G. W. ....	Dublin, Ire. ....	Ireland..	St. John .....	June 8, 1915
Lieutenant..... Wilson, LeRoy Zimmerman .....	C.E. ....	Wilson, Mrs. S. A. ....	Brampton, Ont. ....	Canada..	St. John .....	Mar. 26, 1915

The list also contains the names of 505 non-commissioned officers and men divided as follows: Co. Sergeant Majors, 2; Quartermaster Sergeant, 1; O.R. Sergeant, 1; P.M. Sergeant, 1; Sergeants, 6; Lance Corporals, 24; Corporals, 31; Sappers, 10; Privates, 429.

Capt. H. Wellwood, who returned to Montreal recently to obtain 120 railway men as a reinforcing draft for the original corps, is credited by the Montreal Star with stating that the corps' principal work in Belgium had been the building of a narrow gauge railway behind the first line of trenches extending the whole length of the Belgian front. The train is drawn by a 7 ft. gasoline engine, the cars being just over 3 ft. high. Everything is painted the color of the earth, and when a German flare lights up the locality the train comes to a sudden stop and is practically invisible. By this train food and munitions and everything needed in the trenches is conveyed during the night. One section the Canadians built was over flat country five miles in extent, and they were much exposed to shell fire, but as they only worked at night the casualties were

few. The corps was also engaged in the construction of concrete emplacements for guns in the trenches, and these have been so strongly constructed that when the big Allies drive took place the Germans shelled vigorously the Belgian lines, as a counter-stroke, but the concrete and steel hoods, covered with loose earth and boulders, withstood all the explosives that were hurled against them and as the machine guns covered every possible avenue of approach the Germans had no chance of reaching the Allied lines.

From the last reports received the corps is at Longmoor Camp, Aldershot, Hampshire, England, where it has been since its return from Belgium. It is reported that 13 of the men were admitted to the hospital recently, on account of injuries received on the Woolmer Military Ry. Lt.-Col. Ramsey

has cabled for 20 additional men to replace casualties, discharges, etc. The corps has been highly complimented and mentioned in battalion orders for the excellent work done abroad, and on Nov. 1 it was announced that it was again under orders for foreign service, and reports stated that work was to be undertaken either in Russia or in the Persian Gulf territory.

A draft of 120 men has been recruited in Canada with two officers, to form a reserve base in England for reinforcements. The two officers selected are H. A. Lumsden, A.Can.Soc.C.E., who has been in England with the 19th Battalion, Canadian Expeditionary Force, for some time, and H. B. Sims, M.Can.Soc.C.E., formerly Assistant Division Engineer, C.P.R., Vancouver, B.C. The draft will go to England in charge of Capt. Wellwood and Sergt.-Major Wood.

# Flag Protection of Track Under Repairs, Etc.

By C. Murphy, General Superintendent, Manitoba Division, Canadian Pacific Railway.

It is not my intention to go into statistics or history in connection with railway operation, but merely to mention some new difficulties that have arisen in recent times which go to increase the cost of operating a railway, and at the same time try and provide material for discussion. Everybody is familiar with the rapid and wonderful development in transportation in Canada; I, therefore, need only mention that the latest authentic figures available show that up to the middle of 1914 there were 30,795 miles of railway in Canada, capitalized at \$1,808,820,761.

Passengers carried, 1891 ..	13,222,568
Passengers carried, 1913 ..	46,230,765
Tons of freight handled	
1891 .....	21,753,021 tons
Tons of freight handled	
1913 .....	106,992,710 tons

Notice the enormous increase in twenty years. The cost of transportation has naturally gone up during the same period, and the present is probably the most trying time in the history of Canadian railways and for the operating officer. Earnings until recently were going down and operating expenses going up, presenting a problem that has been giving no little concern. As an illustration, the gross earnings of the railways in Canada in 1913 were \$218,660,000. In 1914 they had dropped to \$176,446,000, a decrease of \$42,214,000. The increases in operating expenses are many and varied, and in some cases are forced on the railways without any apparent benefit or safety over present methods.

With a view of prompting discussion or an expression of opinion, I will quote a communication sent in May by the Board of Railway Commissioners to the different railways in Canada under their jurisdiction, with reference to the adoption of certain flagging rules for track protection, the same being a report by the Board's Chief Engineer and Chief Operating Officer:—

"In order to bring about uniform practice and understanding on all railways under the Board's jurisdiction, we recommend that both the railway companies and the employees, maintenance and operating, be furnished with a copy of the following regulations, and that they be asked to show cause why an order should not go putting the same into effect:

"(a) On all lines over which trains are operated at a speed of 25 miles or more per hour, where defects in the track, obstructions, or any other cause render it impassable, or during the time repairs are being made which render it impassable, and until such time as the movement of trains may be resumed at such places, a man shall be employed to flag all trains, in each direction; which flagman shall be required to carry out all the provisions of rule 99.

"(b) On all other lines protection at such places as mentioned in the preceding paragraph shall be provided in both directions as follows: A red flag by day and, in addition, a red light by night or when weather or other conditions obscure day signals, must be first fixed where it can be seen by the foreman in charge of the work, clear of passing trains, 6 ft. above rail level, on the same side of the track as the engineer of an approaching train, and where it will be clearly in his view, 1,200 yards (24 telegraph poles) if no down grade, and, if there is a down grade within one mile, 1,800 yards (36 telegraph poles) from the defective point, or as much further as may be necessary to insure full protection, with two torpedoes placed on the rails opposite to each other,

so as to make one explosion, 100 yards beyond the red signal. (If the alignment and view are such that a clear view of the signal cannot be maintained by the foreman, a man shall be employed to flag all trains, as set out in paragraph (a).

"(c) A train stopped by these signals shall be protected immediately as required by rule 99, sound whistle signal 14m, and wait until a signal to proceed is given by the foreman in charge of the work. The crew of a train so stopped shall replace the two torpedoes on the rails opposite each other, 100 yards from the red signal.

"(d) Flags for track protection shall not be placed between main tracks of double track lines, or where two separate lines of railway or two subdivisions of the same railway are parallel and close together.

"(e) The railway companies shall have examinations made from time to time to see that the regulations herein required are being carried out and observed.

C. Murphy.  
General Superintendent, Manitoba Division,  
Canadian Pacific Railway.

"(f) The operative part of this order shall be printed in the timetable instructions for the guidance of enginemen and trainmen."

The above communication was dealt with at a joint meeting of all the railways held in Toronto in July last, and after considerable discussion, it was recommended that the following communication be addressed to the Board of Railway Commissioners:—

"Referring to the joint report of the Board's Chief Engineer and Chief Operating Officer, and the new rules recommended therein in connection with the protection of track which may be broken or obstructed while under repairs, or other causes, this matter is one of vital importance to all railway companies in Canada, and as the recommendation involves a very drastic change in the practice of all such companies, it was deemed advisable to have the whole question submitted for consideration to a joint conference of the representatives of the various railway companies affected. The representatives appointed by the various companies have conferred in regard to

the matter and have most carefully considered the recommendations made in the above mentioned report. The result of these conferences has been that, while the representatives of the various companies felt confident that the records of operation on their respective lines show conclusively that the various practices followed by the companies have afforded assurance of safe operation, yet it was recognized that the desire for uniformity was reasonable. However, we believe that it is not practical to have the difference in flagging rule based upon differing speed of trains, because it is well known that such speed is subject to great variation on different portions of practically all lines of railway, whether they are branch lines or main lines, and moreover the section foreman is not in a position to know what speed any particular train will make. It is submitted that the proposed rule, B, recommended by the Board's officers would be practically inoperative, as at times trains run at a speed of 25 miles an hour or more on all lines. In lieu of the rules suggested, the following rules are respectfully submitted as affording a more practical method, and one which will insure safety of operation:—

"When the track is found impassable, due to any obstruction or defect, or if it is necessary to protect the track for the purpose of making repairs or renewals which require trains to stop, trains must be protected in the following manner:

"1. A flagman must be sent in each direction with proper signals, who will place at a point 3,600 ft. from the obstruction a yellow flag by day, and, in addition, a yellow light by night, beside the track on the same side as the engineer of an approaching train, so that it will be clearly in his view; and,

"2. Place two torpedoes not more than 200 ft. nor less than 100 ft. apart on the rail on the same side as the engineer of an approaching train, 300 ft. in advance of the yellow signal; and

"3. Then return to a point not more than 600 ft. from the obstruction and as much nearer as necessary to bring the signal within the vision of the foreman, and place a red flag by day, and in addition a red light by night, beside the track on the same side as the engineer of an approaching train, so that it will be clearly in his view; and

"4. Place two torpedoes on the rails opposite each other so as to make one explosion 150 ft. in advance of the red signal.

"The flagman may then return to assist in the work. When weather, or other conditions, obscure day signals, night signals must be used.

"A train finding a yellow signal displayed as above must observe rule 35 and run expecting to find a red signal displayed 3,000 ft. distant, in which case the train must stop before the engine passes such signal, and must not proceed until a proper signal is received from the point where work is being performed. Failing to find a red signal at such point indicated, the train must run at a speed not exceeding six miles an hour until a proceed signal is received or a green signal is found displayed on the engineer's side beyond the point where the obstruction existed.

"If torpedoes so placed are exploded while protection continues necessary, foreman must see that they are promptly replaced.

"If, for any reason, it is considered necessary to provide other protection, first send a flagman out in each direction with stop signals at least 1,500 ft. in day time, if there

down grade towards the obstruction within one mile and there is a clear view of the obstruction from an approaching train, 3,600 ft. at other time and places, if there is no down grade towards the obstruction within one mile, 1,200 ft. if there is a down grade towards the obstruction within one mile.

The flagman must, after going the required distance from the obstruction to insure full protection, take up a position where there will be an unobstructed view of him from an approaching train of, if possible, 1,500 ft., first placing two torpedoes (not more than 200 nor less than 100 ft. apart) on the rail on the same side as the engineer of an approaching train, 300 ft. beyond such position. The flagman must remain in such position until recalled or relieved.

"We feel confident that, after careful consideration of these rules, the Board's officers will agree that they will be found more workable, and at the same time quite as efficient as those recommended by them. Will you be good enough to submit this communication to the Board. If a further hearing is deemed advisable, we shall be glad to arrange for representatives of the various railway companies to be present."

It will readily be seen that if the Board's suggestion was put into effect it would mean additional men to about every three or four miles of railway, which would be no small amount in increased operation, and with, in our opinion, no increased safety or efficiency. I feel safe in saying, and without fear of contradiction, that we have had less trouble on our railways under our present method of flag protection for track than we have had under man protection, and I am of the opinion that conditions do not warrant any increase in expense such as would be involved by additional men. There may have been failures on the part of men to observe the rules and the signals, but that is a failure of the human element, not of the rules or regulations. It is admitted that up to the present time no rules or regulations have yet been adopted that will avoid failure of the human element.

The foregoing paper was read before the Western Canada Railway Club in Winnipeg recently. In the subsequent discussion a number of questions were asked which Mr. Murphy replied to as follows:—

It is proposed to use the present red, green and yellow flags, and it has been suggested that a flag be placed on two sticks, so that it will always be fully exposed, at right angles to the track. It was the unanimous opinion of the railway representatives at the meeting referred to that a perfectly safe method of flagging on double track, where traffic runs to the left, is as follows:—"On double track, where movement of traffic is to the left, two flags and two lights shall be placed, one on each side of the track to be protected; flags or lights so placed will not affect movement of trains on opposite track."

Rule 35 fully protects a track which has been damaged, but if the proposed rules are adopted, the flagging rules, so far as placing flags on the track is concerned, will be eliminated, and the protection given only by a man. In cases of emergency it would be hard to divide the man up, so that he could flag both ways. Under our present rules he can place his flags in one direction and take necessary steps to protect a train in the other direction.

I cannot recall a single case where an accident has happened under the present system of flagging, as the result of a flag being blown down. There is no difficulty in arranging for a flag to be put up so that it will not be blown down, and in addition to the flag you have the torpedoes on the track. I can, however, recall a case of man failure. Of course, there are times when

conditions are exceptional and rules call for exceptional precautions to be taken, and these would fully cover any cases that have so far arisen.

The Priest flanger, where it is used, is usually on some isolated branch line, but, I think, the cases where the flanger, throwing the snow up and covering the glass with steam, so as to hide the flag from the locomotiveman, would be few and far between. If the weather should be stormy or exceptionally unfavorable conditions apply, exceptional precautions could be taken. Occasionally conditions will occur that it is hard to surround with any rules or regulations.

Very often flags are not left out for the protection of a train when it stops on the main line, but only a torpedo, and that is considered ample protection under the circumstances. I think the rules are perfectly safe under these circumstances, and I do not see that there are any conditions that would make it different in the case of slow track.

We have all heard of cases where trains have been struck on account of not observing the rules, and we will undoubtedly have such cases so long as we are depending on the human element against failure, as we find in most cases it is this and not the rules that cause the trouble. I believe our present method of flagging is perfectly safe, and what is required is a generous application of efficiency testing to keep the men up to the mark in the observance of the rules.

I am not aware of any precedent established on United States lines to warrant bringing forward such a proposition as was made by the Board of Railway Commissioners' officers. To carry out the proposal as outlined would mean an enormous additional expense, and we all know that the railways cannot stand much more of that just now.

The operation of railways is one of the greatest questions before railway people and the public. The operating end is so dovetailed in with other departments that you can hardly find where it begins and ends, and for this reason I am of the opinion that the superintendent of a district should be the head of every department touching the operation of the line. It is only by this means that the different departments can be handled to the best advantage to all concerned.

### Rates on Asbestos Sand from Quebec to Ohio.

In the case of Philip Carey Mfg. Co. et al vs. Grand Trunk Western Ry. et al, it was complained, in April last, that rates on asbestos sand in carloads from Robertson, Thetford, and Sherbrooke, Que., to Lockland and Rockdale, Ohio, are unreasonable and unjustly discriminatory. Following is a summary of the Interstate Commerce Commission's decision given recently:—

Rates in question do not conform to the general adjustment of rates between the Canadian territory of origin and the group in which these destinations are located; the rates on asbestos sand to Rockdale and Lockland are higher than from the same points of origin to Chicago and Milwaukee, while the rates on asbestos fibre from the same points of origin to Rockdale and Lockland are lower than from the same points of origin to Chicago and Milwaukee, the fibre being a lighter loading commodity and much more valuable than the sand. The rates attacked are therefore unjustly discriminatory against complainants.

Following International Paper Co. v. D. & H. Co., 33 I.C.C., 270, and cases therein cited, the Commission's jurisdiction in connection with transportation to or from an adjacent foreign country is over that portion of the

transportation within the confines of the United States. The Commission cannot, therefore, prescribe joint through rates from points in Canada to points in the United States, but it can control the rates which the lines in the United States charge for services rendered within the United States. Joint rates from and to points in Canada are a convenience to the public and the shippers and should be encouraged. It is therefore expected that the defendants will comply with the finding that the rates to Lockland and Rockdale are unjustly discriminatory to the extent that they exceed the rates contemporaneously maintained to Chicago or Milwaukee by proper readjustment of the present joint through rates. If this is not done an order will be entered requiring the defendants that are subject to our jurisdiction to establish in lieu of the present rates joint or local rates from the ports of entry in the United States to Lockland and Rockdale which shall be no higher than those contemporaneously maintained to Chicago or Milwaukee.

W. H. Biggar, K.C., and E. W. Beatty, K.C., represented the Grand Trunk and Canadian Pacific respectively before the Commission.

### Corrections for the Erring.

Some of the United States railway publications get badly tangled up occasionally in their references to Canadian railway matters. For instance, *Railway Engineering & Maintenance of Way* in its last issue published some biographical information about W. A. Cowan, A.M. Can. Soc. C.E., who it says has been "recently appointed Division Engineer of the Canadian Northern Railways at Cochrane, Ont.," and further on it states that in 1914 he was appointed "Resident Engineer of the Canadian Northern Ry. at Truro, and held that position until his recent appointment as Division Engineer of the National Transcontinental Ry." Of course there is no "Canadian Northern Railways," but there is the Canadian Northern Railway, which, however, goes nowhere near Cochrane, and Mr. Cowan is not in its service. Nor was he in its service at Truro, N.S., for a similar reason, viz.: that the C.N.R. has no line in that vicinity, but he was until recently Resident Engineer, Intercolonial Ry., at Truro, and is now Division Engineer, National Transcontinental Ry., at Cochrane, as announced in *Canadian Railway and Marine World* for July.

*Railway Engineering & Maintenance of Way* also states that H. MacLaren has been appointed recently "Division Engineer of the Toronto District of the Canadian Northern Ry. at North Bay, Ont.," and in the same paragraph it says that "he succeeds in the Toronto District J. D. Evans, transferred." H. MacLaren has not been appointed Division Engineer at North Bay and the Canadian Northern's Toronto Division or District does not include North Bay. He has not succeeded J. D. Evans in the Toronto District, for the simple reason that Mr. Evans was formerly Division Engineer of the Ottawa District at Trenton, and not of the Toronto District. And further, there is no H. MacLaren in the C.N.R. service as Division Engineer. G. P. MacLaren is Division Engineer of the Toronto District, with office at Rosedale, as announced in *Canadian Railway and Marine World* for October.

The charges against the Canadian Northern Ry. for contravening sections of the Saskatchewan Liquor Act were withdrawn Oct. 29, as it was shown that the company was making every effort to install the necessary signs in its cars as quickly as possible.

## Sale of Canadian Northern Railway Tickets at Toronto Union Station.

Sir Henry L. Drayton, Chief Commissioner, Board of Railway Commissioners, gave the following decision, Nov. 18: This is an application made by the Canadian Northern Ry. for an order requiring the Grand Trunk Ry. to allow the Canadian Northern to have the privilege of having its tickets on sale at the ticket office operated by the Grand Trunk and Canadian Pacific jointly, on the train floor in the Union Station, Toronto. The G.T.R. opposes the application. In that company's answer it points out that the Canadian Northern has a ticket office on the main floor of the Union Station, and submits that that is all that the Union Station management is required to furnish. The Grand Trunk admits that there is an office on the train floor, jointly maintained by the Grand Trunk and Canadian Pacific Railways, which is principally used for selling tickets to passengers on through journeys who have not been able to buy through tickets at local stations. The Grand Trunk also states that no doubt the Union Station managers would make an effort to supply similar accommodation to the Canadian Northern, if it really needed it, if there was assurance given of payment for the service rendered. The answer further points out that the Canadian Northern is now indebted to the Grand Trunk for about \$260,000, and that the Canadian Northern owes the Toronto Union Station management \$5,090, which constitutes four months' arrears for services in the Union Station.

Unquestionably there are passengers who have only purchased tickets locally to Toronto. Ordinarily speaking there is no reason why these people should not receive exactly the same facilities as passengers on other roads similarly situated. There is no doubt at all as to the inconvenience of having to leave the train shed and go to the rotunda, in view of the manner in which the present Union Station is laid out. It is also obvious, that in case of a close connection, passengers having to do this may be so delayed as to lose their trains, or leave baggage behind unchecked. There is also no doubt that, to some extent, the Canadian Northern suffers, as tickets might well be required for competitive points; and, in the absence of C. N.R. tickets on sale in the train shed, there is not much doubt that the traveller would buy his ticket on the competitive line rather than go to the ticket office on the main floor. I have no doubt that the service is one properly required both in case of the public and in the interests of the Canadian Northern. The best proof that the service is necessary as a convenience is to be found in the fact that the Grand Trunk and Canadian Pacific Railways have, of their own motion, found it necessary to install it for themselves. I am of the opinion that this office should sell tickets for the Canadian Northern in the same manner as it now sells tickets for the two other railways, and should exchange Canadian Northern tickets for orders, as is now done for the other lines. There is no doubt that the Canadian Northern should pay for what it gets. It may well be that the Grand Trunk, on account of the condition of accounts between it and the Canadian Northern, can reasonably object to entering into any joint arrangements or extending any further credit to the Canadian Northern. The cost, however, of this service cannot be great; and the Grand Trunk should give the necessary instructions so that the men now selling tickets for the Canadian Pacific and Grand Trunk in the trainshed ticket office will

perform like duties for the Canadian Northern. The added cost will be practically nothing. Nothing has been said by the Grand Trunk on the question of remuneration. Under the circumstances, the Canadian Northern will pay one-third of the cost of operating the office to the extent of the actual salaries and out-of-pocket expenses. In view of the small amount of business of the Canadian Northern, no rental charges are to be included in the expenses that company contributes to. This apportionment of cost made as it is without full or proper information, is tentative, and if objected to by either party, the question will be listed for hearing and final determination.

The Assistant Chief Commissioner, D'Arcy Scott, concurred. Commissioner McLean said: The dilatoriness shown by the Canadian Northern in settling its outstanding accounts with the Toronto Union Station management makes me hesitate in agreeing to an arrangement which may enable the railway to owe some more money. At the same time there is a public need which justifies some such arrangement as is recommended and this public need must be considered. But, if this need is to be met in the way requested by the Canadian Northern, the continuance of the arrangement should be contingent on prompt adjustment by it of its share of the expense attaching to the arrangement.

**Proposed Railway Across Nicaragua.**—A press dispatch from Washington, D.C., states that a representative of a Canadian firm, with headquarters in Winnipeg, was recently in Managua, to discuss with the Nicaraguan President the possibility of obtaining a concession to build a railway across the isthmus through Nicaragua, and that it was decided not to grant such a concession at present.

## Grand Trunk Railway Fire Brigade Competitions.

W. D. Robb, Superintendent of Motive Power, G.T.R., announces that two of the annual fire brigade competitions for employees have been won this year by the car shops men at London, Ont. The company has employees' fire brigades at the various main repair shops, locomotive house terminals and other large buildings. The organization comprises hose and hook and ladder companies, the members of which are supplied with coats, helmets, rubber boots, etc. The men are regularly drilled and reside within easy distance of the shops in order that they can respond promptly to an alarm. The company recognizes the work of the men composing these fire brigades in many ways, granting additional free transportation to themselves and families and awards prizes in the annual competitions amounting to \$250. The "dry" race was won this year by no. 2 company of the car shops at London, and they were also winners in the "wet" race. The hook and ladder race was won by a Montreal team from the car department.

**Passenger Meetings at Buffalo.**—The Great Lakes and St. Lawrence River Rate Committee, International Water Lines Passenger Association, and Niagara Frontier Summer Rate Committee, will meet at Hotel Iroquois, Buffalo, N.Y., in January. The Niagara Frontier Summer Rate Committee's rate representatives will meet on Jan. 4 and 5 at 9 a.m. for compilation of fares, etc. The general meeting will be on Jan. 6 at 10.30 a.m. The Great Lakes and St. Lawrence River Rate Committee will meet immediately following the adjournment of the Niagara Summer Rate Committee meeting.

# Mainly About Railway People Throughout Canada.

Sir H. Montagu Allan has been elected Vice President, Royal Trust Co., succeeding the late Sir William Van Horne.

F. W. Peters, General Superintendent, British Columbia Division, C.P.R., has been elected President of the Vancouver Canadian Club.

J. McNaught, Solicitor, C.P.R., Montreal, was presented with a purse of money on leaving for England to enlist for active service.

H. W. Mudge, formerly President, Rock Island System, has been elected President of the Denver & Rio Grande Rd., succeeding B. F. Bush.

Sir Henry L. Drayton, K.C., Chairman, Board of Railway Commissioners, has been elected a member of the Imperial Society of Knights Bachelor.

E. T. Slocum, of Detroit, Mich., who is said to have been one of the original directors of the Canada Southern Ry., died there Nov. 21, aged 76.

H. Hulatt, Manager of Telegraphs, G.T.R. and Grand Trunk Pacific Ry., Montreal, has been elected a director of the Grand Trunk Pacific Telegraph Co.

A. W. Smithers, Chairman, G.T.R. and Grand Trunk Pacific Ry., sailed from Montreal, Nov. 26, for England, after completing his annual visit to Canada.

Lieutenant G. S. Boyle, reported, Nov. 15, to have died of wounds received in the Dardanelles district, was formerly on the Intercolonial Ry. engineering staff.

Lieutenant S. L. Cullen, of the C.P.R. Publicity Department, Montreal, was presented recently with a silver cigarette case by the staff, on leaving for active service.

Baron Welby, who died in England, Oct. 30, aged 83, was for many years prominent in financial circles in London, and was for some time a director of the Grand Trunk Ry.

B. T. Chappell, heretofore Superintendent, Canadian Northern Ry., Saskatoon, Sask., was given a presentation by business men there on being transferred to Vancouver, B.C.

Count Jacques de Lesseps, who is a son in law of Sir Wm. Mackenzie, President, Canadian Northern Ry., has been awarded the French military cross for valor in aviation work.

L. W. Baldwin, formerly General Superintendent of all Illinois Central Ry. lines south of the Ohio River, has been appointed General Manager of the Central of Georgia Ry., at Savannah.

Lady and Miss Van Horne, who spent several weeks at their place, Covenhoven, St. Andrews, N.B., after Sir William's death, returned to their town house in Montreal early in November.

The name of the C.P.R. station, formerly called Muskoka, Ont., 23 miles south of Parry Sound, has been changed to MacTier in honor of A. D. MacTier, General Manager Eastern Lines, C.P.R.

J. W. Stewart, President, Pacific Great Eastern Ry., returned to Vancouver, B.C., towards the end of October, after an absence of three months, during which he visited his early home in Scotland.

J. S. Dennis, Assistant to the President and in charge of the National Resources Department, C.P.R., Calgary, Alta., has been elected First Vice President of the International Irrigation Congress.

E. J. Chamberlin, President, G.T.R., and Grand Trunk Pacific Ry., has been elected a director of Molson's Bank, in place of D.

McNicoll, formerly Vice President, C.P.R., who retired owing to ill health.

F. J. Moss, who is stated in a cablegram to have been Canadian Northern Ry. Emigration Agent at London, Eng., is said to have been placed on the Canadian Pay and Record Office staff at Westminster.

F. C. Salter, European Traffic Manager, Grand Trunk Ry., London, Eng., was one of the speakers at the installation of Dr. Lewis Hunt, a former Nova Scotian, as Mayor of Richmond-on-Thames, Eng., November 9.

The Sydney, N.S., house of J. H. Plummer, President, Dominion Steel Corporation, Sydney and Louisburg Ry., and Cumberland Railway and Coal Co., was totally burned Nov. 10. Mr. Plummer is ill at his Toronto house.

R. L. Latham, Chief Engineer, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., and L. E. Silcox, Division Engineer, Hudson Bay Railway, Winnipeg, have been elected mem-

W. P. Hinton.  
Traffic Manager, Grand Trunk Pacific Railway and Grand Trunk Pacific Coast Steamship Co., and Western Traffic Manager, Canadian Government Railways.

bers of the American Railway Engineering Association.

Major George Janin, M.Can.Soc.C.E., City Engineer of Montreal, who commanded a corps of engineers which he raised for war service, was drowned when the hospital ship Anglia was sunk in November by striking a mine.

The Vancouver Board of Trade on Nov. 14 expressed regret at the resignation of G. E. Graham, as Vice President, on account of his removal to Kentville, N.S., where he has been appointed General Manager, Dominion Atlantic Ry.

J. K. L. Ross, one of the C.P.R. directors, applied on behalf of the estate of his late father, James Ross, for \$500,000 of the Dominion war loan issued in November. Sir Herbert Holt, another C.P.R. director, applied for \$100,000.

W. A. Mason, a G.T.R. ticket agent at Toronto, was committed for trial at Toronto, Nov. 16, on a charge of the theft of \$1,500, received for the sale of tickets and unac-

counted for. He pleaded not guilty and was granted bail of \$3,000.

R. W. Burnett, formerly General Master Car Builder, C.P.R., Montreal, is now Vice President, National Car Equipment Co., 339 Railway Exchange, Chicago, Ill., which handles various railway specialities and represents the Falk Co., Milwaukee, Wis.

Sir Thomas G. Shaughnessy, President, Canadian Pacific Ry.; Sir William Mackenzie, President, Canadian Northern Ry., and Sir Henry L. Drayton, Chairman, Board of Railway Commissioners, attended Sir Charles Tupper's funeral in Halifax, N.S., Nov. 15.

Lt. Col. Wm. Hendrie, of Hendrie & Co., Ltd., Hamilton, Ont., cartage contractors, G.T.R., who went overseas in 1914 as Major of the 48th Highlanders, has returned to Canada. He served recently in the Remount Department in France and England.

H. Le Jeune, formerly of the C.P.R. Hotel Department, who was stricken with paralysis at Winnipeg, Sept. 9, and was removed on Oct. 19 from the Royal Alexandra Hotel, where he had lived for several years, to St. Boniface Hospital, died Nov. 22, aged 71.

Lord Strathcona's will filed recently for probate in Ontario, shows the gross value of the estate at about \$28,000,000, of which \$4,000,000 is represented by real estate in Canada; \$4,113,000 by 19,475 shares in the C.P.R.; \$646,000 by 2,777 shares in the Bank of Montreal.

S. R. Hesson, who died at Stratford, Ont., Nov. 17, aged 86, was connected with the earlier days of railway building in Canada, having been chairman of the trust board under the control of which were the funds for the construction of the Georgian Bay and Lake Erie Ry.

E. G. Darnley, who is stated to have been formerly in C.P.R. service in Canada, is reported to have been awarded the contract by the Australian Government to raise the German cruiser Emden, which was driven ashore by the Australian warship Sydney, at Keeling Island, in Nov. 1914.

F. P. Brady, General Superintendent, National Transcontinental Ry., Cochrane, Ont., was reported, early in November, to be seriously ill in a Montreal hospital, but on Nov. 3 a statement issued from Cochrane announced that there was no foundation for the rumor and that he was in his usual state of health.

Sir Andrew Noble, who died in Scotland towards the end of October, aged 84, was Chairman, since 1901, of Sir W. G. Armstrong, Whitworth & Co., Ltd., shipbuilders and ordnance manufacturers, of England, builders of several special vessels utilized in Canadian service. He is survived by Lady Noble, who is a native of Quebec.

G. Cummings, who died at Allandale, Ont., aged 65, had been in G.T.R. service for 47 years, chiefly as a locomotive driver. In his early days with the company he was on the run between Toronto and Collingwood, when wood was used as fuel, and a full freight train consisted of 18 cars, each of not more than 10 tons weight. He was pensioned on Apr. 1.

E. B. Pryor, who has been with the Wabash Rd. through its many vicissitudes for 35 years, for the past four of which he has acted as one of the receivers, has retired from active railway service, on the conclusion of the receivership and the reorganization of the company, and is devoting his time to the affairs of the State National Bank, St. Louis, Mo., of which he is President.

**William Downie**, formerly General Superintendent, Atlantic Division, Canadian Pacific Ry., at St. John, N.B., and now of Whitby, Ont., was operated on at Wellesley Hospital, Toronto, Nov. 1, for gall stones. On Nov. 20 he was removed to another private hospital at 33 St. Vincent St., Toronto. He is convalescing satisfactorily and is expected to be able to leave the hospital early in December.

**T. E. Boddy**, who died at Toronto, Nov. 18, from gas asphyxiation, was the first train dispatcher on the Credit Valley Ry., at Streetsville Jct., Ont., and was subsequently ticket agent, C.P.R., at the Union Station, Toronto, and later, City Ticket Agent, C.P.R., Peterborough, Ont., which position he held until he was superannuated. The funeral at Streetsville on Nov. 22 was attended by several local railway and steamship officials.

**Dr. J. Alexander Hutchison**, Chief Medical Officer, Grand Trunk and Grand Trunk Pacific Railways, has three sons enlisted for overseas service, viz., Bruce Caverhill, aged 21, McGill science student, trooper, Headquarters Staff, Second Brigade, Canadian Mounted Rifles; Keith Ogilvie, aged 19, McGill medical student, private, no. 3, Canadian General Hospital; and Ross Rutherford, aged 18, McGill art student, sapper, no. 2 Signal Co., Canadian Engineers.

**John Howard**, who died at Orangeville, Ont., recently, entered railway service with the Credit Valley Ry., about 1880. In 1897, on the absorption of the Credit Valley Ry. by the C.P.R., he was appointed station agent at Mount Forest, and in 1900 was transferred to Orangeville, where he remained until retired under the pension rules. K. R. Howard, a travelling auditor for the C.P.R. at Brandon, Man., and H. W. Howard, agent, Canadian Northern Ry., Kindersley, Sask., are sons.

**Harold S. Granger**, who has been appointed City Freight Agent, Canadian Northern Ry., Edmonton, Alta., was born at London, Ont., Aug. 19, 1892, and entered railway service Mar. 3, 1910, since when he has been, to Aug., 1911, clerk, District Freight Office, C.P.R., London, Ont.; Aug. to Oct., 1911, clerk, General Freight Office, Canadian Northern Ry., Winnipeg; Oct., 1911, to Jan., 1915, chief clerk, District Freight Agent's office, C.N.R., Edmonton, Alta.; Jan. to Oct., 1915, Soliciting Freight Agent, C.N.R., Saskatoon, Sask.

**Henry Goldmark**, Consulting Engineer, New York, N.Y., who has done considerable work in Canada, has been retained to take charge of the fabrication, in the United States, of the lock gates, sluice valves, operating machinery and electrical equipment for the large tidal lock which will give access to the new harbor at Chemulpo, Korea. The work is to be done in accordance with competitive plans prepared by Mr. Goldmark for the McClintic-Marshall Co., of Pittsburgh, successful bidders on the entire equipment, which were adopted by the harbor authorities.

**Lieutenant J. C. Hughes**, of the Royal Canadian Engineers, who was reported, Nov. 16, to have been killed in action, by a shell, at Loos, was the only son of Jas. L. Hughes, formerly Inspector of Schools, Toronto, and a nephew of Major General Sir Samuel Hughes, K.C.B., Minister of Militia. He was educated at Parkdale Collegiate and the School of Practical Science, Toronto, graduating in 1909 with the degree of B.A.Sc. He was for some time on the C.P.R. engineering staff, and was engaged on location of the Campbellford, Lake Ontario and Western Ry. Just prior to the war, he was engaged in railway location work in New Brunswick.

**John Alton Audrain**, who has been appointed Trainmaster, C.P.R., Minnedosa,

Man., was born at St. John's, Jersey, Channel Islands, Jan. 23, 1883, and entered C.P.R. service in Apr., 1897, since when he has been, to 1904, apprentice, car shops, Winnipeg; 1904, to July 1, 1905, mechanic, car shops, Winnipeg; July 3 to Aug. 31, 1905, express messenger, Dominion Express Co., Winnipeg to Gretna and Emerson; Aug. 31, 1905, to May 1, 1906, mechanic, car shops, C.P.R., Winnipeg; May 10, 1906, to July 28, 1910, brakeman and baggage man, main line and branches out of Winnipeg; July 28, 1910, to Sept. 7, 1915, station master, Winnipeg.

**W. Roberts Devenish**, A.M.Can.Soc.C.E., who has been appointed Superintendent, District 2, Intercolonial Ry., Campbellton, N.B., was born in County Tipperary, Ireland, Nov. 21, 1882, and entered transportation service in 1903, serving with the C.P.R. for eight years, in various capacities in the Engineering and Maintenance of Way Departments, from rodman to Assistant Division Engineer, Lake Superior Division. He was appointed Division Engineer, Canadian Government Railways, Moncton, N.B., in

J. A. Audrain,  
Trainmaster, District 3, Manitoba Division,  
Canadian Pacific Railway.

Sept. 1913, and for a time prior to that he acted as Assistant Engineer with the National Transcontinental Ry. Investigation Commission.

**Lieutenant-Colonel W. B. Kingsmill**, who has been appointed to the command of the 123rd Battalion, Canadian Expeditionary Forces, is a member of the firm of Saunders, Torrance and Kingsmill, legal representatives of the Michigan Central Rd., and its subsidiaries in Canada. He is a son of the late Nicol Kingsmill, K.C., who was for 40 years secretary of the Canada Southern Ry. Co., owned by the M.C.R., and is grand son of the late W. A. Thomson, M.P., one of the promoters and builders of the Canada Southern Ry. His paternal grandfather was an officer in the regiment which guarded Napoleon Bonaparte, during his exile at St. Helena. Vice Admiral Kingsmill, of the Canadian Naval Service, is a cousin.

**William Alan Whyte**, who has been appointed District Freight Agent, Canadian Northern Ry., Regina, Sask., was born at Hornsey, England, Nov. 24, 1890, and en-

tered transportation service, July, 1906, since when he has been, to July, 1909, in the Outward Freight Department, Allan Line Steamship Co., London, England; Sept. 8 to Oct. 31, 1909, in Import Foreign Freight Office, C.P.R., Montreal; Nov. 6, 1909, to Jan. 31, 1911, in Local Freight Office, C.P.R., Regina, Sask.; Feb. 1, 1911, to Feb. 25, 1915, City Freight Agent, Canadian Northern Ry., Regina, Sask.; Mar. 1, to Oct. 31, 1915, City Freight Agent, C.N.R., Calgary, Alta.

**W. S. Cookson**, who has been appointed General Passenger Agent, G.T.R., Montreal, was born at Port Jervis, Orange County, N.Y., June 12, 1871, and entered railway service July 15, 1886, since when he has been, to Nov. 1, 1886, clerk in Car Record Office, Erie Rd., Jersey City; Nov. 1, 1886, to Dec. 1, 1899, clerk in General Roadmaster's office, Chicago and Western Indiana Rd., Chicago, Ill. (the G.T.R. is part owner of this railway); Dec. 1, 1899, to May 1, 1909, chief clerk, Assistant General Passenger Agent's office, G.T.R., Chicago, Ill.; May 1, 1909, to June 1, 1910, Assistant General Passenger Agent, G.T.R., Chicago, Ill.; June 1, 1910, to Nov. 13, 1915, Assistant General Passenger Agent, G.T.R., Montreal.

**Hugh McCauley Bird**, whose appointment as acting Trainmaster, District 3, National Transcontinental Ry., Graham, Ont., was announced in our last issue, was born at Alton, Ont., Aug. 31, 1874, and entered transportation service in 1890, since when he has been, to 1896, freight clerk, C.P.R., Owen Sound, Ont., and West St. John, N.B.; 1896 to 1897, clerk, C.P.R., Montreal; 1897 to 1900, freight checker, C.P.R., Owen Sound and Fort William, Ont.; 1900 to 1910, train man, Canadian Northern Ry., Port Arthur and west, and out of Toronto to Parry Sound, Ont.; 1910 to 1912, Trainmaster, New Canadian Co., Port Daniel, Que.; 1912 to 1915, conductor and agent, MacDonnell and O'Brien, railway contractors, Parent, Que.

**G. A. Stokes**, who has been appointed Superintendent of Sarnia Tunnel Terminals, G.T.R., Port Huron, Mich., was born in Nassagaweya Tp., Ont., July 23, 1879, and entered G.T.R. service, Nov. 15, 1897, since when he has been, to Oct. 15, 1899, operator, Listowel, Ont.; Oct. 15, 1899, to Mar., 1899, relieving agent; Mar., 1899, to Apr., 1907, agent, consecutively, at Harriston, Wingham, Warton and Brantford, Ont.; Apr., 1907, to Nov. 1, 1910, dispatcher, Stratford, Ont.; Nov. 1, 1910, to Sept. 13, 1912, Yardmaster, Don station, Toronto; Sept. 13, to Oct. 25, 1912, General Yardmaster, Toronto Terminals; Oct. 25, 1912, to Aug. 10, 1913, Terminal Superintendent, Toronto; Aug. 10, 1913, to Nov. 4, 1915, Division Agent, Ontario Lines, Toronto.

**W. J. Rooney**, who has been appointed Division Superintendent of Telegraphs, Alberta and British Columbia Lines, Grand Trunk Pacific Ry., Edmonton, Alta., was born at Toronto, May 22, 1882, and was from Oct. 19, 1896 to Jan. 17, 1903 in the Toronto Electric Light Co.'s stores and wire departments; Jan. 17, 1903 to Nov. 30, 1905 in Great North Western Telegraph Co.'s construction department; Dec. 1, 1905 to Jan. 15, 1913, General Foreman of Telegraph Construction, Grand Trunk Pacific Ry.; Jan. 15, 1913 to Oct. 25, 1915 Superintendent of Telegraph Plant, G.T.P.R., Winnipeg. Over 600 miles of telegraph line in the prairie provinces were built under his personal direction and he had jurisdiction over all telegraph and telephone construction undertaken by the company between Edmonton, Alta., and Prince Rupert, B.C.

**Right Honorable Sir Charles Tupper**, G.C. M.G., who died at Bexley Heath, England, Oct. 30, was born at Amherst, N.S., July 2, 1821. He played an important part in the

Confederation of the various Provinces now forming the Dominion of Canada, was Minister of Public Works in 1878, and later was appointed the first Minister of Railways and Canals. During his regime the Government policy in connection with the enlargement of the Welland Canal, the deepening of the St. Lawrence channel and a number of improvements on the Intercolonial Ry., was carried out, and in addition, the construction of a private company, of the Canadian Pacific Ry. was undertaken. From April to June 1896, he was Premier of the Dominion. He retired from public life in 1900 and had since lived in England.

**Harry Logan**, Traffic Manager, Los Angeles Dock Co., Los Angeles, Cal., who died there, Nov. 9, from malaria, caused presumably from a mosquito bite while aboard a vessel from South America which was being unloaded, was born in Toronto and started work in District Freight Agent's office, Grand Trunk Ry., there. He was in the Lehigh Valley Rd.'s Freight Department in Toronto for about 15 years as junior clerk, chief clerk and Travelling Freight Agent consecutively. Then he was Travelling Freight Agent for the Canadian Northern Ry. for about 4 years, after which he went to California. He was a well known yachtsman and a member of the Royal Canadian Yacht Club and was at one time in the Queen's Own Rifles and afterwards in the Governor General's Body Guard.

**George Edward Graham**, whose appointment as General Manager, Dominion Atlantic Ry., Kentville, N.S., was announced in our last issue, was born in May 1870, and entered C.P.R. service July 4, 1888, since when he has been, to June 1900, operator, Havelock, Ont.; June 1900 to Nov. 1, 1901, station and weighing inspector, Winnipeg; Nov. 1, 1901 to Feb. 1, 1905, Supervisor of Weighing, Montreal; Feb. 1, 1905 to Aug. 7, 1906, Superintendent, Winnipeg; Aug. 7, 1906 to Mar. 1, 1907, Assistant Superintendent, Brandon, Man.; Mar. 1, 1907 to Feb. 17, 1908, Superintendent, Brandon, Man.; Feb. 17, 1908 to Jan. 1, 1910, Superintendent, Fort William and Port Arthur, Ont.; Jan. 1, 1910 to Sept. 30, 1913, Superintendent, Vancouver, B.C.; Sept. 30, 1913 to Oct. 1915, General Manager, Coquitlam Terminal Co., Ltd., Vancouver, B.C.

**W. B. Smith**, General Manager, Dominion Transport Co., who died at his home in Montreal, Nov. 8, was born at Huntly, Scotland, in 1829, and came to Canada in 1855, entering the service of the late John Shedden, the founder of the Shedden Forwarding Co., in London, Ont. He was transferred to Montreal to take charge of that company's business there in 1860, and was later connected with the late D. Morrice in the cartage business for the Quebec, Montreal and Ottawa Ry., now part of the C.P.R. Subsequently he organized the Dominion Transport Co., of which he was General Manager until his death. T. J. Smith, General Freight Agent, Atlantic Service, C.P.R., London, Eng., is a son, and V. G. R. Vickers, Manager Foreign Department and Superintendent Atlantic Division, Dominion Express Co., Montreal, is a son in law.

**G. H. Hedge**, who has been appointed General Master Mechanic, Western Lines, Canadian Northern Ry., Winnipeg, was born at Neath, Wales, May 26, 1865, and entered railway service in 1879 as machinist apprentice with the Great Western Ry., in England. He came to Canada in 1884, since when he has been, from Mar., 1884, to 1890, fitter in C.P.R. shops at Ottawa, Schreiber, Montreal, Hochelaga and again at Montreal, where he was leading hand; 1891 to 1893, Locomotive Foreman, C.P.R., Megantic, Que.; in 1893 he was transferred to Farnham, Que., and subsequently to Montreal;

1896 to 1901, General Locomotive Foreman, C.P.R., Farnham, Que.; 1901 to 1902, Locomotive Foreman, C.P.R., Medicine Hat, Alta.; 1902 to Jan., 1903, Locomotive Foreman, C.P.R., Brandon, Man.; Jan., 1903, to June, 1908, Locomotive Foreman, Canadian Northern Ry., Port Arthur, Ont.; June, 1908, to Jan., 1912, Assistant Master Mechanic, C.N.R., Winnipeg; Jan., 1912, to Nov., 1915, Master Mechanic, Central Division, C.N.R., Winnipeg.

**William Frederick Allen**, Assoc. M. Soc. C.E., General Secretary of the American Railway Association and Editor and Manager of the Official Railway Guide, died on Nov. 9 from a stroke of apoplexy, at his home in South Orange, N.J. He was born at Bordentown, N.J., in 1846 and received his education at the Protestant Episcopal Academy and the Bordentown Model School. He was first employed as a surveyor on the old Camden & Amboy (N.J.) Rd. In 1868 he became Engineer of the West Jersey Rd. He was an expert on the

W. S. Cookson,  
General Passenger Agent, Grand Trunk Railway.

standardizing of railway time. In 1875 he was made General Secretary and Treasurer of the General Time Convention, which was composed of the principal trunk line railways and was represented by their general managers and superintendents. The following year he was elected Secretary of the Southern Time Convention, consisting of the leading Southern railway lines. These conventions were consolidated in 1886 and from them the American Railway Association developed.

**Cecil Wray Johnston**, who has been appointed Assistant General Passenger Agent, G.T.R., Montreal, was born at Actonvale, Que., July 27, 1879, and entered G.T.R. service Sept. 1, 1897, since when he has been, to Mar. 8, 1900, operator and agent at Richmond, Que.; Berlin, Ont.; Island Pond, Vt., and Sherbrooke, Que., consecutively; Mar. 9, 1900, to June 21, 1901, clerk to Auditor of Freight Accounts, Montreal; June 22, 1901, to June 25, 1902, ticket clerk, Montreal; June 26, 1902, to Dec. 31, 1904, Travelling Passenger Agent, Montreal; Jan. 1, 1905,

to Feb. 15, 1907, excursion clerk, General Passenger Agent's office, Montreal; Feb. 16, 1907, to May 10, 1909, Travelling Passenger Agent, Montreal; May 11, 1909, to Jan. 31, 1912, chief clerk, General Passenger Agent's office, Grand Trunk Pacific Ry., Winnipeg; Feb. 1, 1912, to May 25, 1913, chief clerk, Assistant Passenger Traffic Manager's office, G.T.R., Montreal; May 26, 1913, to Feb. 15, 1914, chief clerk, Passenger Traffic Manager's office, Montreal; Feb. 15, 1914, to Nov. 13, 1915, Assistant to Passenger Traffic Manager, Montreal.

**W. P. Hinton**, who has been appointed Traffic Manager, Grand Trunk Pacific Ry. and Grand Trunk Pacific Coast Steamship Co., and also Western Traffic Manager, Canadian Government Railways, Winnipeg, and whose portrait appears in this issue, was born at Hintonburg, Ont., Aug. 30, 1871, and entered railway service, May 1887, since when he has been, to Aug. 1891, clerk, freight, passenger and car accounts, and travelling auditor, Canada Atlantic Ry.; Aug. 1891 to Mar. 1898, rate clerk, same road, and accountant, Canada Atlantic Fast Freight Line; Mar. 1898 to June 30, 1901, Assistant General Freight Agent, same road, and Canada Atlantic Transit Co.; June 30, 1901 to Jan. 30, 1903, General Freight Agent, same road; Jan. 30, 1903 to Oct. 1905, General Passenger and Freight Agent, same road; Oct. 1905 to Jan. 1907, General Agent, Passenger Department, G.T.R., Ottawa, Ont.; Jan. 1907 to Apr. 1909, Assistant General Passenger and Ticket Agent, same road, Montreal; Apr. 1909 to Feb. 1914, General Passenger Agent, Grand Trunk Pacific Ry., Winnipeg; Feb. to Oct. 1914, Assistant Passenger Traffic Manager, same road, Winnipeg; Oct. 1914 to Nov. 11, 1915, Assistant Passenger Traffic Manager, G.T.R. and G.T.P.R., Montreal.

**Railways and the Operation of the Quebec Bridge.**—E. J. Chamberlin, G.T.R., replying to a communication from the Quebec Board of Trade, Nov. 4, respecting the use of Quebec terminals by railways operating south of the St. Lawrence, stated that such a matter could hardly be considered seriously until it had been determined what the position of the Dominion Government would be relative to the use of the Quebec bridge when completed. When this had been settled it would then be for the railways concerned to consider whether it would be profitable for them to cross the river or not. At a subsequent meeting of the Board of Trade, the Secretary was instructed to write the Department of Railways and Canals with a view to ascertaining what fees would be charged railways for the use of the bridge. Pending this information, it is understood that no steps regarding terminal facilities in Quebec will be undertaken by any of the railways referred to.

**The June Mechanical Conventions.**—At a meeting of the executive committees of the American Railway Master Mechanics' Association and the Master Car Builders' Association, at Chicago, Ill., Nov. 15, it was decided that the next conventions will be held at Atlantic City, N.J., the Master Car Builders' Association meetings commencing June 14, and the American Railway Master Mechanics' Association meetings June 19. There is a possibility that some future conventions will be held at Chicago.

**The C.P.R. has adopted a service badge** for passenger trainmen. Passenger conductors are given one gold bar for 15 years service, and an additional bar for every additional five years of service. Other trainmen and uniformed employees are given silver bars for the same number of years service. Sleeping car conductors are given the first gold bar for 10 years service.

# Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

**Alberta and Great Waterways Ry.**—In an interview at Edmonton, Nov. 1, the President, J. D. McArthur, is reported to have stated that the work done on this line during this year includes 160 miles of grading, which takes the line practically to Fort McMurray. Track laying is being gone on with, and it is expected to have the 160 miles ready for operation early next spring. A train service is in operation to Lac La Biche, mileage 124, and Fort McMurray is at about mileage 300 from Edmonton. (Nov., pg. 407.)

**Burrard Inlet Tunnel and Bridge Co.**—Application is being made to the Dominion Parliament for an extension of time for the commencement and completion of this projected bridge over the North Arm of Burrard Inlet with railway and tunnel connections. E. T. Cockerell, North Vancouver, B.C., is Secretary of the company. (Nov., pg. 437.)

**Canadian Pacific Ry.**—A press report stating that a contract had been let to the Foundation Co., Montreal, for the construction of a bridge at Darling, on the Toronto-Sudbury line, 114.8 miles from Toronto, at a cost of about \$50,000, was mentioned in Canadian Railway and Marine World for November. We are advised that there is nothing new in the report. Last spring the Foundation Co. was awarded a contract for building the substructure of Shaw's Creek Bridge, near Darling, which work has been finished for some time, the erection of the superstructure being left over until some future date.

The extension of the line easterly from Foremost, Alta., now under construction, will carry the line to about 10 miles from Lake Pakowski, and will leave a gap of about 44 miles to connect with the present western end of steel at Allawan, Sask. This line is generally known as the Weyburn-Lethbridge line.

Dredging is reported to have been started between sheds 3 and 4 at the quayside, Vancouver, to deepen the basins so as to allow ocean going steamships to go alongside the electric crane when taking on heavy machinery or other heavy cargo. (Nov., pg. 437.)

**Central Canada Ry.**—R. Douglas, an engineer of the Alberta Railways Department, returned to Edmonton, Nov. 4, after making an inspection trip over this line, under construction from McLennan, on the Edmonton, Dunvegan and British Columbia Ry., to Peace River Crossing. The line is about 50 miles long, and grading is reported completed with the exception of a small cut near Peace River Crossing. The cut was being blasted when Mr. Douglas was there, owing to frost having set in, and it was expected to have the grading finished in a fortnight thereafter. Track had been laid to mileage 37 from McLennan, and was expected to be laid to the crossing early in December. The plans for the building of a permanent bridge at the crossing of the Hart River, mileage 40, are under consideration, but no plans, we are officially advised, have been prepared for the crossing of Peace River. Timothy and Riley are the grading contractors. (Oct., pg. 392.)

**Dominion Government Railway to Hudson Bay.**—We are officially advised that grading has been completed to mile 378, from Pas. Man., leaving 46 miles more to be completed to Port Nelson the terminus on Hudson Bay. Track has been laid to mileage 241, at the Manitou rapids of the Nelson River. Ballasting has been completed to mileage 150, and surfacing to mileage 220. A considerable amount of team filling has been done

during the year. The telegraph line is completed to mile 223, and water tanks have been erected to mile 214. The weather conditions during the whole season have been good, and a very satisfactory amount of work has been done.

The steel bridge which is being erected at the Manitou rapids of the Nelson River is of the anchored cantilever type. It consists of three piers and two abutments of concrete, which were completed in October. A start has been made with the erection of the steel, and the work will be carried on throughout the winter. J. W. Porter, is Chief Engineer.

We are officially advised that the Manitoba Railways Department has not heard of any suggestion being made that it should undertake the building of a line from Pas to some recent gold discoveries in northern Manitoba. (Nov., pg. 437.)

**Edmonton, Dunvegan and British Columbia Ry.**—Grading between Smokey and Spirit Rivers is reported to have been completed, about 60 miles having been done this year. Track laying is not expected to be completed until Mar., 1916.

The Board of Railway Commissioners has authorized the building of a bridge over the Smokey River for which a contract has been let to the Dominion Bridge Co. The bridge, which will have a total length of 1,100 ft., will consist of two spans of 86 ft. each, six spans of 128 ft. each, and one through span of 125 ft. Work on erecting the steel is expected to be begun in January, and to be completed in April next.

R. Douglas, an engineer connected with the Alberta Railways Department, returned to Edmonton Nov. 4, after an inspection of the line, and of the Grande Prairies branch. He is reported to have said that grading for the entire 60 miles had been completed, with the exception of some connecting strips in the Saddle Mountains district, between mileage 19 and 30. He expected that grading would be entirely completed by Dec. 1. The track is not expected to be laid until next spring. G. H. Webster, of Calgary, is contractor for grading. (Nov., pg. 437.)

**Grand Trunk Ry.**—The Owen Sound, Ont., Town Council has granted permission for the laying of a siding along the West Esplanade to William Kennedy and Son's works.

Permission has been granted by the Goderich, Ont., Town Council for the extension of the siding at the North American Chemical Co.'s premises, Maitland Road. (Nov., pg. 437.)

**Grand Trunk Pacific Ry.**—The Board of Railway Commissioners has approved revised location of the branch line from Biggar, Sask., to Calgary, Alta., through the s. e.  $\frac{1}{4}$  sec. and n.  $\frac{1}{2}$  sec. tp. 35, range 17, west third meridian, Sask. This branch is in operation from Biggar to Loverna, 105 miles.

The Saskatoon city council has advised the company's officers that while it will be very glad to see the G.T.P.R. have an entrance to the new Union Stockyards, it must make its own arrangements with the C.P.R. and the Canadian Northern.

The Pacific Northern and Omineca Ry., the charter of which is owned by the G.T.P.R., is applying to the Dominion Parliament for an extension of time for the building of its projected railway from Kitimat Inlet on the Pacific Coast, to Hazelton on the Skeena River, then to the northern boundary of British Columbia at Teslin or Otter Lake; and from Hazelton easterly to the Peace River Pass, and on to Edmonton, Alta. (Nov., pg. 437.)

**Great Northern Ry. (U.S.A.)**—During the year ended June 30, there has been constructed at the Winnipeg terminal of the Midland Ry. of Manitoba (one of the G.N.R. controlled lines in Canada), a five unit fruit warehouse, each unit being 67 x 80 ft.; a loading platform 10 x 40 ft., and there have been laid various additional industrial tracks with a total length of 1.13 miles.

Alderman Gale was informed at the Vancouver City Council Railways Committee meeting, Nov. 4, that nothing had been done in the way of preparing plans for the station, as directed by the Board of Railway Commissioners, except so far as preliminary strides were concerned. The committee decided to wait until Dec. 1 before taking any further action. (Oct., pg. 392.)

The designs for the new passenger station for the G.N.R. and the Northern Pacific Ry., were submitted to the Vancouver city council, Nov. 7, and approved. The plans were prepared by F. L. Townley, and show an L shaped building, having a frontage of 228 ft. on Park Lane, with a depth of 60 ft., while the L will be 40 x 130 ft. The building will be of reinforced concrete on pile foundations, faced with a granite base and terra cotta brick. The front portion of the building will consist of a main waiting room 60 x 100 ft., flanked by two wings two storeys high. In the lower portion of these wings will be waiting, immigration, telegraph, telephone and stationmaster's offices, and a large exhibition room. The operating and traffic staffs will be accommodated in the upper storeys, the G.N.R. occupying one wing and the N.P.R. the other. In the L there will be baggage, express and mail rooms, and on the east side running the whole length of the building there will be a concourse 28 ft. wide, with glass roof, giving access to 11 sets of tracks, each of which will have an umbrella connecting with the roof of the concourse. A private road will run by the side of the L for the baggage and express traffic, and another road will give access to the waiting room. There will be two entrances to the front of the building. The building will be erected on a part of the reclaimed False Creek flats.

The detail plans are in course of preparation, and it is reported that contracts for the erection of the building will be placed at an early date.

The plans were given consideration by the Vancouver City Council's bridges and railway committee, Nov. 11, and approved, the committee asking the company to let the contracts at once, and to set back the main front 100 ft. back from the Park Lane street line. The city council had the plans before it, Nov. 15, but declined to take any action beyond deciding to forward copies of the plans to the Board of Railway Commissioners and to the Provincial Government, and concurring in the resolution of the bridges and railway committee to have the building set back 100 ft. from the Park Street line, so as to make it conform with the Canadian Northern Pacific Ry. proposals.

A. H. McNeill, K.C., counsel for the company, submitted the following statement regarding the sums the company proposed to expend as estimated by F. L. Townley, the architect: Foundations, pile and concrete, \$30,000; station building, \$268,699; heating, \$25,000; boiler house, \$10,000; pipe tunnel, \$5,000; marquise and concourse, \$15,000; umbrella shed and platforms, \$42,000; architect's fees, superintendence and incidentals, \$25,000; making a total of \$421,000. To this must be added the cost of paving the driveways, \$12,000; tracks, including switches,

\$44,000; commissary and car supply building, \$15,000; filling, \$175,000; engine house, \$25,000; engineering, superintendence, administration, etc., \$24,000; a grand total of \$716,000. Freight sheds would cost an additional \$100,000; team tracks, another \$100,000; and additional tracks and switches, to make up eleven in all, \$105,000. These sums total \$1,921,200.

We were officially advised, Nov. 18, that the plans have to be approved by the Board of Railway Commissioners before anything further can be done. (Oct., pg. 392.)

**Greater Winnipeg Water District Ry.**—A project is under consideration in Winnipeg for the promotion of settlement along the route of this railway from St. Boniface to Indian Bay, Lake of the Woods. The line is owned by the City of Winnipeg, and the cooperation of the Dominion and Manitoba Governments is being sought in the proposed plan. The railway was built to facilitate the construction of the new water supply works for Winnipeg, and it is hoped by this means to make the line a permanent revenue producing one, and to aid in solving the unemployment difficulty.

**Intercolonial Ry.**—The passenger station at Levis, Que., which was burned some time ago, will not be rebuilt before next year.

A press report states that the survey work which has been in progress all summer between Truro, N.S., and Painsec Jct., N.B., will be completed by the end of the month. The reconnaissance survey was made last year by Engineer Clarke, who has had charge of the three location parties working this year. The result of the survey is said to give a 0.5% gradient one way and a 0.6% gradient the other, compensated for curvature. The press report says: "The line of the survey goes up the North River from Truro and crosses the Cobequids at the Earltown Lake, the lowest summit in the range. This point of crossing is about 250 ft. below Folleigh Lake, where the crossing is made by the present line. From the Earltown Lake point it passes to New Annan and then past the west end of Mattatall Lake, near Wentworth. After that it follows the ridge east of Wallace River down to a crossing at Carr's Mill Bridge, and thence to Pugwash Junction. After crossing the Pugwash River at some point not yet indicated, the survey line would pass Port Phillip and go, close to the shore, to Baie Verte and across country to Painsec Junction.

We are officially advised that the following contracts have been let since the last ones announced in Canadian Railway and Marine World:—Diversion at mileage 11 from Moncton, to join the I.R.C. with the National Transcontinental Ry., J. W. McManus & Co., Moncton; coal handling plant at Levis, Que.; foundations, Lynch, Peckham and Gorham, Cape Tormentine, N.B.; machinery, Williams and Wilson, Montreal; substructures of four bridges in the vicinity of Fredericton, N.B., R. C. Sutherland, Otsubstructures of four bridges in the vicinity of Sydney, N.S., Jones and Girouard, Ottawa; filling of nine bridges in vicinity of Mulgrave, N.S., G. W. Jowitt & Co., Maugerville, N.B.

The subway under the tracks at Main St., Moncton, N.B., is reported to be completed, and was expected to be ready for street car traffic by the end of November. About 15,000 cubic ft. of earth were excavated. Directly in the centre the ground was excavated to a depth of 13 ft., while the tracks were raised some 5 ft. and graded accordingly on both ends. Some 25 cars of cement, 175 cars of gravel, 10 scow loads of sand, 25 cars of sand, 100,000 ft. of lumber and about 50 kegs of nails were used, besides considerable other material. The excavation and concrete work was done by Soper and Mc-

Dougall, Limited, Ottawa, and the steel work by Rhodes, Curry & Co., Amherst, N.S.

We are officially advised that the construction of the spur line at Bathurst, N.B., is well advanced and should be completed at an early date.

Referring to the press report as to surveys between Truro, N.S., and Painsec Jct., N.B., we are officially advised that they have not yet been completed, and that no official information respecting the gradients, etc., is at present available.

In connection with the branch line from Sunny Brae to Mulgrave, N.S., we are officially advised that no construction has been done this year.

The two last items refer to what Sydney, N.S., papers describe as a new route between Moncton, N.B., and Sydney, N.S., upon which it says the year's survey work has just been completed. A cutoff from the Truro-Painsec Jct. line starts, says the report, at Kempton, and joins the present Truro-Sydney line east of the union station; the line from Ferrona Jct. to Sunny Brae may be used as a part of the route. Two or three routes have been surveyed in Guysboro county, and the report says the route thought most likely to be adopted will be one terminating on the waterfront at Milford, eight miles east of Mulgrave, the present point of crossing to Cape Breton Island. The new route on the island is said to run through St. Peter, to Gabarus and Louisbourg. The press report concludes: "Not only has the field work of the survey been all completed, but the plans of bridges which would be necessary on the new line have been finished as well as plans for the ferry docks, etc., at the Strait of Canso."

In an interview at Montreal, Nov. 5, F. P. Gutelius, General Manager, is reported to have said that although little second track work has been done during this year, about 10,000 tons of new steel have been laid on the main line. About 20% of the main line mileage is now laid with 85 lb. steel, and the remainder with 80 lb. steel. The bridges between Montreal and Halifax are now capable of carrying trains drawn by the heaviest locomotives. The most important of the new bridges constructed is that over the Grand Narrows, on the line to Sydney, N.S., which has been raised 6 ft. About half the station buildings have been repainted, and the remaining half will be done next year. (Nov., pg. 437.)

**Kettle Valley Lines.**—The last spoke on the Coquihalla valley section, which connects up the line with the C.P.R. at Hope, B.C., was expected to have been driven by Nov. 30, and it is hoped to have the line opened for traffic early next spring.

The elevation of the Coquihalla Summit is 3,300 ft. above sea level, and the gradient westerly is 2.2%, while that going easterly is 1%. On the easterly side of the summit the last station is named Juliet, while the first station west of the Summit is Romeo, and all the other stations down the valley to Hope are named after Shakespearean characters. Near Romeo is the large steel bridge erected over Slide Creek, while between it and Boston Bar Creek, the snow sheds are being erected. The permanent steel bridge at Ladner Creek is reported to be practically completed. The general contractors of this section of the line were McArthur Bros., New York; the bridge superstructures were erected by the Dominion Bridge Co., and the snow shed contract is being carried out by Guthrie & Co. A. McCullough is Chief Engineer. (Nov., pg. 437.)

**National Transcontinental Ry.**—Negotiations are reported to be in progress for the taking over by the Dominion Government of the Quebec and Saguenay Ry., a partially constructed line owned by the Quebec Ry., Light and Power Co. The Canadian

Northern Ry. has been reported to have also had some negotiations for taking over the line. The Minister of Railways went over the line recently in company with F. P. Gutelius, General Manager, Canadian Government Railways, and a press report states that track laying and ballasting will be gone on with at once, and the line from the junction with the Q. Ry., L. and P. Co.'s line to Murray Bay got ready for operation by the end of the year. These reports have been so frequent for the past three years or so without anything resulting, that the present statements may be classed as merely a rumor.

We are officially advised respecting the projected pulp mill at Neelands, Ont., that D. Chisholm, who is in control of the project, has let contracts for clearing and grading at the site. The railway officials have not yet started the work of laying the necessary spur track. Neelands is about 30 miles west of Cochrane, the junction point with the Timiskaming and Northern Ontario Ry., and the spur line will be about three miles long. (Nov., pg. 437.)

**Pacific Great Eastern Ry.**—Track is expected to be laid early in December to Clinton, B.C., about 166 miles from Squamish, the Howe Sound terminus of the line, and about 40 miles beyond Lillooet, to which point a train service is in regular operation.

The company is applying to the North Vancouver City Council for a renewal of a lease of land upon which it has a Y for turning its cars. The city passed a resolution, Nov. 2, granting a two years extension of the lease on condition that the company assist the city in obtaining title from the Government to certain foreshore properties. (Oct., pg. 392.)

**Roberval and Saguenay Ry.**—The Quebec Legislature is being asked to extend the time for the building of the projected railway from Roberval on the Quebec and Lake St. John Ry., running round Lake St. John to the Peribonka River, and thence south easterly to the Q. & L. St. J. Ry., near Jonquières, with a branch line to St. Bruno; and for the completion of the lines of the Ha Ha Boy Ry., acquired by the R. & S. Ry., and especially the projected branch line to the St. Maurice River.

**St. John and Quebec Ry.**—D. F. Maxwell, Engineer of Railways for New Brunswick, has made a report to the Provincial Government upon the strata found upon boring tests made at the Mistake, on St. John River, and at Perry's Point, on the Kennebecasis River, at which place it is proposed to build bridges on this railway. It is said that the tests show that suitable foundations can be secured for the bridges at such points on the line as originally routed by the surveys made under his direction. The report was considered at a meeting of the Cabinet held Nov. 4.

The question of the completion of the line, which has been taken over by the Provincial Government, is under consideration by the Cabinet. (Oct., pg. 393.)

#### PACIFIC NORTHERN AND OMINECA RAILWAY COMPANY.

NOTICE is hereby given that the Pacific Northern and Omineca Railway Company will apply to the Parliament of Canada, at the next session thereof, for an Act extending the time within which it may proceed to construct, complete and put into operation the lines of railway which it was authorized to construct by chapter 90 of the statutes of 1902, as amended by chapter 141 of the statutes of 1906, and for other purposes.

Dated at Montreal, this 3rd day of November, A.D. 1915. W. H. BIGGAR,

Solicitor for the applicants

# Traffic Orders by the Board of Railway Commissioners.

## Gravel Weights on Michigan Central Rd.

24381. Oct. 29. Re application of Hagersville Contracting Co., Ltd., complaining against maximum and minimum weights on carloads of gravel shipped over St. Clair Division, Michigan Central Rd.: It is ordered that the M.C.R. publish forthwith a supplement to its Tariff, C.R.C. no. 1743, embodying the following rule, viz.: "The minimum weight on traffic destined to the St. Clair Division of the Michigan Central Rd. will be 50,000 lbs., unless the marked capacity of the car is less, in which case the marked capacity of the car, but not less than 40,000 lbs., will be the minimum; and on traffic destined to points on the St. Clair Division the total weight of the car and contents must not exceed 100,000 lbs.

## Perishable Freight in Heated Cars.

24385. Oct. 28. Re order 23392, Mar. 4, 1915, directing the C.P.R. to accept shipments of perishable freight for carriage in heated cars between points west of Port Arthur, Ont., upon the terms and conditions set forth in the order. Upon its appearing that the said order was not limited, in the terms of the judgment, to less than carload shipments as intended: It is ordered that the same be, and it is hereby amended as follows, viz.: By adding after the figures "16" in the 6th line of the recital to the order the words, "applying to lines west of Port Arthur, Ont.," and adding after the word, "accept," and before the word, "shipments," in the second line of the operative part of the order, the words, "less than carload." And it is further ordered that orders 23860, June 16, 1915; 23997, July 22, 1915, and 24132, Aug. 28, 1915, approving forms of Release and Responsibility Special Contract of and Canadian Northern Railway Companies, and Canadian Northern Railway Companies, respectively, be so interpreted.

## Application for Freight Refund Refused.

24400. Nov. 4. Re complaint of A. H. Mayland, of Calgary, Alta., against extra freight charged by C.P.R. on a shipment of hogs to Gordon, Ironsides & Fares, of Moose Jaw, Sask., the shipments in question having been through billed with allowance made for diversion charge. Upon hearing the complaint at Calgary, June 9, the applicant being present at the hearing, and upon the report of the Traffic Officer of the Board, it is ordered that the complaint be dismissed.

## Charge on Cars Awaiting Furtherance Orders at Cartier.

24436. Nov. 11.—Re application of Canadian Pacific Ry. for an order rescinding order 6147, Jan. 21, 1909, as amended by order 10100, Mar. 15, 1910; and for authority to make an extra charge for cars remaining on hand at Cartier, Ont., awaiting furtherance orders, after the expiration of 72 hours from time of arrival: Upon hearing the application in Montreal, Jan. 29, 1915, and in Ottawa, Sept. 21, 1915, the Dominion Millers and the Montreal Corn Exchange Associations, the Canadian Pacific, Grand Trunk, and Canadian Northern Railway Companies, and the Montreal and Toronto Boards of Trade being represented at the hearing, and upon the report and recommendation of the Chief Traffic Officer of the Board—it is ordered that the applicant company be authorized to publish and file a tariff to provide for the charging of special tolls for detention of cars containing western grain and grain products at Cartier for more than 72 hours while awaiting furtherance orders from the consignees thereof, as follows, namely: \$1 a car per day of 24 hours, or part thereof, for the first two days

following the expiration of the said 72 hours, and \$2 a car per day of 24 hours for each succeeding day, or part thereof; the said tolls to be chargeable in addition to the ordinary demurrage toll prescribed by order 906, Jan. 25, 1906, and the stopover charge as fixed by order 6147, Jan. 21, 1909, as amended by order 10100, Mar. 15, 1910.

## Suspension of Import Tariffs.

24440. Nov. 16.—Re application of Toronto Board of Trade for an order suspending Canadian Pacific Ry. Tariff, C.R.C. no. E-3060, published to become effective Dec. 1, containing increased rates on import merchandise from St. John and West St. John, N.B., to stations and connections: Upon reading what has been filed in support of the application, the Canadian Pacific and Grand Trunk companies consenting to the suspension of the tariffs hereinafter set forth, it is ordered that C.P.R. Import Tariff, C.R.C. no. E-3060, from St. John and West St. John, N.B., and G.T.R. Import Tariff, C.R.C. no. E-3280, from Portland, Me., be suspended until further order.

## Shipments of Beer in Heated Cars.

24459. Nov. 20. Re order 23392, Mar. 4, 1915, made upon complaint of Fernie-Fort Steele Brewing Co., Ltd., directing the C.P.R. to accept shipments of such perishable freight as beer, fruit, and vegetables, for carriage in heated cars to its stations on such day or days of each week as are duly announced for the service by the company, subject to the conditions set forth in the order. Upon reading what is filed by the Calgary, Brandon, Winnipeg, Swift Current, Regina, and Moose Jaw Boards of Trade, the Early Fruit Co., Ltd., the Scott Fruit Co., the Northern Fruit Co., and the British Columbia Fruit Growers' Association, it is ordered that order 23392 be amended to provide that the "release" therein mentioned apply only to shipments of beer, in less than carload quantities, on railways west of Lake Superior. That orders 23860, June 16, 1915; 23997, July 22, 1915, and 24132, Aug. 28, 1915, approving forms of release of responsibility special contract of Canadian Pacific, Grand Trunk Pacific, and Canadian Northern Railways, respectively, be rescinded.

## Refrigerator Car Rates for Vegetables.

General order 152, Nov. 2. Re application of Toronto Board of Trade for an order disallowing the following schedules to apply on carload shipments of vegetables when loaded in refrigerator cars, namely, Supplement 5 to G.T.R. Tariff C.R.C. no. E12859 Supplement 15 to C.P.R. Tariff C.R.C. no. E-2715, and Supplement 2 to Canadian Northern Ry. Tariff C.R.C. no. E-386: It is ordered that the railway companies which supply refrigerator cars, at the request of the shippers, for the carriage of vegetables in carload lots, may publish and file tariffs providing for the following maximum tolls for the use of the said cars, to be charged in addition to the tolls published and filed for the same movements in ordinary box cars, viz.: For any distance not exceeding 300 miles, \$3 a trip. For any distance over 300 miles, but not exceeding 500 miles, \$5 a trip. For any distance over 500 miles, but not exceeding 750 miles, \$6 a trip. For any distance over 750 miles, but not exceeding 1,000 miles, \$7.50 a trip. For any distance over 1,000 miles, \$10 a trip. Provided that the maximum toll between any two points, both of which are east of the Detroit and St. Clair Rivers, the Georgian Bay and Sudbury, Ont., including Sudbury, also between any two points both of which are west of Port

Arthur, inclusive, do not exceed \$7.50 a trip. And it is further ordered that any existing schedules in conflict with this order be disallowed.

## Changes in Canadian Freight Classification to be Approved Before Becoming Effective.

General Order. 153. Re sec. 321 of the Railway Act and orders dated Mar. 3, 1904, and Jan. 18, 1909, it is ordered as follows:

1. That any proposed new issue of the Canadian Freight Classification, or any proposed supplement to the issue then current, be submitted in printed proof form for the approval of the Board before it be made effective.

2. That should such proposed new issue or supplement remove any goods from a lower to a higher class, or in any way increase the amount to be paid for carriage, notice of the submission thereof be published in the two next succeeding issues of the Canada Gazette, in the following form:

"Notice is hereby given that the Canadian Freight Association did, on the.....day of....., 19...., submit to the Board of Railway Commissioners for Canada, for its approval, Canadian Freight Classification no. .... (or Supplement no. .... to Canadian Freight Classification no. ....)."

3. That the said proof show and include—

(a) Under the heading of "Additions," articles not previously classified and the proposed ratings therefor, also new rules or regulations which it is proposed to add to the Classification.

(b) Under the heading "Changes," proposed increased or reduced ratings, or changes in the existing rules or regulations, and in a parallel column those previously approved by the Board.

4. That the application to the Board be accompanied by—three copies of the said proof; the reasons, fully stated in manuscript, for proposed changes involving increased transportation charges; a copy of the notice furnished to the King's Printer for publication in the Canada Gazette.

5. That at the same time one copy of the said proof, also of the said notice for publication, be furnished to the following bodies, with the request that fully explained objections, if any, to proposed changes involving increased transportation charges be filed with the Board of Railway Commissioners within 30 days from the receipt of the said proof and notice:—Canadian Manufacturers' Association, Ontario Grocer's Guild, Fruit Growers' Association of Ontario, Montreal Chamber of Commerce, Boards of Trade of Belleville, Berlin, Ont., Brandon, Man., Brantford, Brockville, Ont., Calgary, Alta., Chatham, Collingwood, Cornwall, Ont., Edmonton, Alta., Fort William, Ont., Fredericton, N.B., Galt, Guelph, Ont., Halifax, N.S., Hamilton, Kenora, Kingston, Ont., Lethbridge, Alta., London, Ont., Medicine Hat, Alta., Montreal, Que., Nelson, B.C., Ottawa, Owen Sound, Peterboro, Port Arthur, Preston, Ont., Prince Albert, Sask., Prince Rupert, B.C., Quebec, Que., Regina, Sask., St. Catharines, Ont., St. Hyacinthe, Que., St. John, N.B., St. Thomas, Sarnia, Ont., Saskatoon, Sask., Sherbrooke, Que., Stratford, Ont., Three Rivers, Que., Toronto, Ont., Valleyfield, Que., Vancouver, Victoria, B.C., Waterloo, Windsor, Ont., Winnipeg, Man., Woodstock Ont., also to the railway companies which are not members of the Canadian Freight Association.

## Classification of Cream Pasteurizers.

General Order 154, Nov. 10. Re application of C. Richardson & Co., St. Mary's, Ont., for a reduction in classification of cream pasteurizers, in less than carload lots. It is

ordered that, pending a revision of the present Canadian Freight Classification, railway companies are directed forthwith to publish and file commodity tariffs, to apply between all points in Canada, covering the following, namely:

From one milk can, agitators, 1 C.C.
from two milk can, agitators, 1 C.C.
from three milk can, agitators, 1 C.C.
from four milk can, agitators, 1 C.C.
from five milk can, agitators, 1 C.C.
from six milk can, agitators, 1 C.C.
from seven milk can, agitators, 1 C.C.
from eight milk can, agitators, 1 C.C.
from nine milk can, agitators, 1 C.C.
from ten milk can, agitators, 1 C.C.
from eleven milk can, agitators, 1 C.C.
from twelve milk can, agitators, 1 C.C.
from thirteen milk can, agitators, 1 C.C.
from fourteen milk can, agitators, 1 C.C.
from fifteen milk can, agitators, 1 C.C.
from sixteen milk can, agitators, 1 C.C.
from seventeen milk can, agitators, 1 C.C.
from eighteen milk can, agitators, 1 C.C.
from nineteen milk can, agitators, 1 C.C.
from twenty milk can, agitators, 1 C.C.

#### Charge for Cleaning Live Stock Cars.

General Order 155, Nov. 15. Re general order 147 July 29, 1915, granting permission to railway companies to charge not exceeding 75c. for cleansing and (or) disinfecting any car in which live stock has been carried when the work is done by the railway companies; and that the said toll may lawfully

be an addition to the charges, as published in the companies' tariffs, for transportation of the live stock unloaded from the said cars. Upon its appearing that there is some misunderstanding as to the scope of the order as embodied in the tariffs filed; and that some of the railway companies at least are of opinion that the order authorized a charge for cleaning as distinct from disinfecting, it is ordered that the railway companies publish and file amended tariffs showing a toll not exceeding 75c. for cleaning and disinfecting, or disinfecting any car in which live stock has been carried when the work is done by the railway companies; the tariffs to carry a notation that the charge is to apply when, on account of Federal, provincial or municipal regulations, it is necessary to do the work in question.

## Birthdays of Transportation Men in December.

Many happy returns of the day to:—

E. T. Agate, M.Can.Soc.C.E., ex District Engineer, Canadian Northern Ontario Ry., Sudbury-Port Arthur Line, now of Pittsford, N.Y., born there, Dec. 7, 1874.

J. H. Barber, M.Can.Soc.C.E., Engineering Department, C.P.R., Montreal, born at Cobourg, Ont., Dec. 20, 1856.

O. C. Bishop, Superintendent, Sleeping and Dining Cars and News Service, Canadian Northern Ry., Winnipeg, born at Escanaba, Mich., Dec. 10, 1876.

N. E. Brooks, M.Can.Soc.C.E., Engineer of Maintenance of Way, Western Lines, C.P.R., Winnipeg, born at Sherbrooke, Que., Dec. 25, 1866.

Harold Browning, steamship agent, etc., Windsor, Ont., born at Stamford, Lincolnshire, Eng., Dec. 2, 1864.

W. W. Butler Vice President, Canadian Car and Foundry Co., Montreal, born at Danville, Ohio, Dec. 9, 1862.

J. M. Cameron, General Superintendent, Alberta Division, C.P.R., Calgary, born at Lochabar, N.S., Dec. 18, 1867.

M. M. Campbell, Building Inspector, G.T.R., Montreal, born at Bridgeton, N.B., Dec. 17, 1879.

W. C. Casey, General Agent, Passenger Department, Atlantic Steamship Lines, C.P.R., Winnipeg, born at Moncton, N.B., Dec. 12, 1882.

A. H. Chave, Purchasing Agent and Assistant to First Vice President, Canadian Car and Foundry Co., Montreal, born at Williamsbridge, N.Y., Dec. 26, 1872.

W. H. Gardiner, City Freight Agent, C.P.R., and District Freight Agent, Esquimalt and Nanaimo Ry., Victoria, B.C., born there Dec. 6, 1859.

H. H. Gildersleeve, Manager, Northern Navigation Co., Sarnia, Ont., born at Kingston, Ont., Dec. 15, 1865.

A. S. Goodeve, member Board of Railway Commissioners for Canada, born at Guelph, Ont., Dec. 15, 1860.

A. J. Gorrie, Superintendent, District 1, National Transcontinental Ry., Quebec, born at Raith, Kirkcaldy, Scotland, Dec. 10, 1868.

W. H. Grant, Manager of Construction, Mackenzie, Mann and Co., Ltd., Toronto, born at Acton, Ont., Dec. 8, 1858.

F. P. Gutelius, M.Can.Soc.C.E., General Manager, Canadian Government Railways, Moncton, N.B., born at Mifflinburg, Pa., Dec. 21, 1864.

Jas. H. Hall, President, Western Transportation Co., Ltd., Ottawa, Ont., born at Hawkesbury, Ont., Dec. 20, 1863.

D. B. Hanna, Third Vice President, Canadian Northern Ry., Toronto, born at Thornliebank, Scotland, Dec. 20, 1858.

J. J. Hennigar, Agent Great Lakes Trans-

portation Co., Windsor, Ont., born at Topeka, Kan., Dec. 21, 1884.

E. W. Holton, General Passenger Agent, Northern Navigation Co., Sarnia, Ont., born at Belleville, Ont., Dec. 15, 1872.

A. J. Isbester, Assistant District Engineer, Port Arthur District, Canadian Northern Ry., Port Arthur, Ont., born at Ottawa, Dec. 18, 1879.

R. Johnson, Assistant Locomotive Foreman, C.P.R., Hochelaga, Montreal, born at Quebec, Que., Dec. 24, 1863.

S. R. Joyce, Travelling Passenger Agent, G.T.R., Toronto, born at Napanee, Ont., Dec. 15, 1887.

J. T. McGrath, ex-Superintendent of Motive Power and Equipment, Chicago and Alton Rd., Bloomington, Ill., born at Toronto, Dec. 6, 1869.

A. T. McKean, City Freight Agent, C.P.R., Winnipeg, born at St. John, N.B., Dec. 18, 1886.

A. E. Macdonald, General Claims Agent, Canadian Northern Ry., Winnipeg, born at Woolwich, Eng., Dec. 11, 1870.

L. Macdonald, Division Freight Agent, G.T.R., Toronto, born at Montreal, Dec. 10, 1871.

A. D. MacTier, General Manager, Eastern Lines, C.P.R., Montreal, born at Blairgowrie, Scotland, Dec. 27, 1867.

J. C. O'Donnell, Superintendent, District 3, Western Division, Canadian Northern Ry., Edmonton, Alta., born at Cobden, Ont., Dec. 17, 1879.

S. R. Payne, General Manager, Ottawa and New York Ry., Ottawa, Ont., born at Jefferson, Ohio, Dec. 21, 1865.

A. Price, Assistant General Manager, Eastern Lines, C.P.R., Montreal, born at Toronto, Dec. 6, 1861.

W. J. Radford, Assistant to General Manager, Toronto Suburban Ry., Toronto, born at Boldre, Hampshire, England, Dec. 23, 1870.

G. D. Robinson, Assistant Export and Import Freight Agent, C.P.R., Toronto, born at St. John, N.B., Dec. 7, 1877.

Collingwood Schreiber, C.M.G., Hon. Mem. Can.Soc.C.E., General Consulting Engineer to Dominion Government, Ottawa, Ont., born at Bradwell, Essex, Eng., Dec. 14, 1831.

M. F. Tompkins, Division Freight Agent, Intercolonial Ry., Halifax, N.S., born at Margaree, N.S., Dec. 6, 1878.

C. E. E. Ussher, Passenger Traffic Manager, C.P.R., Montreal, born at Niagara Falls, Ont., Dec. 29, 1857.

H. H. Vaughan, M.Can.Soc.C.E., Consulting Engineer, C.P.R., Montreal, born at Forest Hill, Essex, Eng., Dec. 26, 1868.

R. C. Vaughan, Assistant to Third Vice President, Canadian Northern Ry., Toronto, born there, Dec. 1, 1883.

A. P. Walker, M.Can.Soc.C.E., Assistant Division Engineer, Ontario Division, C.P.R., Toronto, born at West Hartlepool, Eng., Dec. 9, 1860.

E. H. Wood, Division Car Foreman, Ontario Division C.P.R., Toronto, born at St. John, N.B., Dec. 30, 1880.

## Railway Rolling Stock Notes.

The C.P.R. has received one second class steel passenger car from its Angus shops, Montreal.

Canadian Government Railways has ordered a 100 ton wrecking crane from F. H. Hopkins and Co.

The Canadian Northern Ry. has received 11 steel underframe standard sleeping cars from Canadian Car and Foundry Co.

Canadian Government Railways, between Oct. 18 and Nov. 16, received 362 box cars from Canadian Car and Foundry Co.; 162 box cars, from National Steel Car Co.; 95 steel flat cars from Nova Scotia Car Works, and 4 consolidation locomotives from Canadian Locomotive Co.

### Proposed Charge for Checking Baggage.—

A recommendation of one of the committees of the American Association of Passenger Traffic Officers, at its recent annual meeting, was to the effect that a nominal terminal charge of 10c be made for checking baggage. Several reasons are advanced why such a charge should be made, among them being that a passenger travelling with a large trunk receives a greater service free than one who has only hand baggage, which he looks after himself and checks at the terminal for convenience; and that the companies' liability for loss of or damage to baggage has been increased.

### Observation Platforms in Mountains.—

The Grand Trunk Pacific Ry. has for some time had an observation platform at mileage 1,082.5 from Winnipeg, from which passengers get a view of Mount Robson. Another observation platform has been installed 184 miles east of Prince Rupert, between Bulkeley Canyon and New Hazelton, at which train 1 stops for five minutes to let passengers see the Bulkeley Gate, the principal scenic feature of the Bulkeley Canyon. Sign posts are being erected to point out the most prominent scenic features in the mountains.

### Great Northern Ry. of Canada Construction Suits.—

Judgment in the appeal and cross appeal, referred to in Canadian Railway and Marine World for November on pg. 417, was given Nov. 1. The court sustained the Superior Court's judgment granting Smith, Barry and McRae \$63,886 on their claim for a balance of about \$200,000 due on the construction of the Hawkesbury-Joliette section of the line. The court further reduced the award of \$33,000 face value of original first mortgage bonds to \$24,750, and sustained the award of \$330,000 of G.N.R. stock.

### Stanstead, Shefford and Chambly Ry.—

The annual meeting was held at Waterloo, Que., Nov. 18. The directors for the current year are,—G. G. Foster, President; E. J. Chamberlin, Chairman; E. C. Smith, Vice President; W. W. Chaffee, Assistant Secretary and Treasurer; E. C. Smith, G. C. Jones, G. Stevens, J. P. Noyes, Jas. Davidson and W. H. Robinson. J. H. Lefebvre is Secretary-Treasurer, and E. J. Chamberlin, E. C. Smith and G. C. Jones form the executive committee for the management of the line, which is leased to the G.T.R.

### The American Railway Bridge and Building Association will hold its next annual convention at New Orleans, La., Oct. 17 to 19, 1916.

# Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, Telegraph, and Railway and  
Canal Contractors' Interests.  
Official Organ of the various Canadian  
Transportation Associations.  
Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors.  
70 Bond Street, Toronto, Canada.

## Canadian Northern Passenger Service Extended to Pacific Coast.

Commencing Nov. 23 from Edmonton westbound and Nov. 24 from Vancouver eastbound, passenger service was established on the C.N.R. between Edmonton and Vancouver, connecting at Edmonton with the service between there, Winnipeg and Toronto. The first connecting train from the west left Toronto Nov. 19, and the first through train from Vancouver arrived in Toronto Nov. 29. The inauguration of this service marks the completion of the C.N.R. as a transcontinental line. The through service between Toronto and Vancouver consists of three trains a week each way. Train 1 leaves Toronto Monday, Wednesday and Friday at 10.45 p.m., reaching Vancouver Saturday, Monday and Wednesday at 5.30 p.m. Train 2 leaves Vancouver Friday, Sunday and Wednesday at 9 a.m., reaching Toronto Wednesday, Friday and Monday at 2.30 p.m.

The C.N.R. main line had not been operated west of Edmonton previously, except by a mixed train bi-weekly to Peace River Jct., mileage 35.7. The new timetable shows that Tollerton, 136.9 miles westerly from Edmonton, is the terminus of the Western Division. In addition to the new main line mileage brought under the operating department, the Peace River subdivision, extending from Peace River to Sangredo, 31.4, is given a bi-weekly mixed train service. The new Pacific Division extends from Tollerton, Alta., to New Westminster, 625.9 miles. This is operated in five subdivisions, viz.: Tollerton, Alta., to Lucerne, B.C., 128.9 miles; Lucerne to Blue River, 110.4 miles; Blue River to Kamloops, 142.5 miles; Kamloops Jct. to Boston Bar, 125.7 miles; Boston Bar to New Westminster, 118.4 miles.

The company's Passenger Department has issued the following information about the route: "The new line from Port Arthur to Sudbury runs through what is known as the 'Clay belt' of Northern Ontario, lying generally somewhat north of the C.P.R. line. The country adjacent to our line is well wooded, and when cleared is adaptable to general farming. The lumbering industry, which will quickly develop, will no doubt very shortly be a profitable source of revenue to the company. The traveller will find the ever changing vista of forest, river and lake a welcome change from the bare monotony of the western prairies. The Nipigon country, just east of Port Arthur, adjacent to the Canadian Northern Ry., has been celebrated for many years as the paradise of the fisherman and big game hunter. The possibilities in this respect of the line further east have not yet developed, but undoubtedly the fishing and hunting throughout the whole district from Port Arthur to Sudbury are exceptionally good. Lakes of fair size are numerous, and all abound in game fish. Big game hunting for moose, bear, deer will undoubtedly be excellent, and in fact the possibilities for sport in the line of fishing and hunting are unsurpassed anywhere on the North American continent. From Edmonton west to Vancouver the shortest route is followed to the Yellowhead Pass, where the road crosses the main ridge of the Rocky Mountains at a maximum elevation of 3,711 ft. above sea level, through the pass within a few miles of Mount Robson, the highest peak in the Canadian Rockies, 13,700 ft., thence through the low Cranberry Lake Pass, across the Canoe River and up Camp Creek to the Albreda River, which it follows from its source to its junction with the North Thompson River. The line then follows the valley of the North Thompson to its junction with the South Thompson. From

Kamloops the north shore of Kamloops Lake is followed to Savona, a distance of 40 miles. After leaving Kamloops Lake the line keeps to the valley of the Thompson River until a short distance beyond Ashcroft, crossing there to the south side, and after a short distance again to the north side, which is followed to the junction of the Thompson and Fraser Rivers at Lytton, where the river is again spanned by a heavy steel bridge, and re-crossed at Cisco to the south side. From Cisco the valley of the river is followed to New Westminster and thence into Vancouver. Until very recently the section from Kamloops to the Yellowhead Pass was practically unknown, settlement being confined to the lower part of the North Thompson. Until the Canadian Northern Ry. sent its engineers through in 1909 the trail had been previously traversed by only a few timber cruisers and prospectors, although as far back as 1862 a trip was made by Viscount Milton and Dr. Cheadle from Edmonton to Kamloops, following practically the same route as the present Canadian Northern line, two months being consumed in making the trip."

## Civil Engineers Look Over Welland Ship Canal Construction.

The Canadian Society of Civil Engineers, Toronto branch, held its annual excursion Nov. 5, when a number of the members, accompanied by a considerable number of under-graduates of the Faculty of Applied Science, Toronto University, went for a trip over a portion of the route of the Welland Ship Canal. The party of about 130 left Toronto at 8.10 a.m., in special cars on the G.T.R. regular train, which were detached at Merritton and run over the G.T.R. branch line to Thorold. They then walked over the work on section 3, had luncheon at a contractor's camp and walked on to Merritton, whence they were taken in Niagara, St. Catharines and Toronto Ry. cars, hauled by a Welland Ship Canal Construction Ry. locomotive, over that line to the Lake Ontario entrance of the canal at Port Weller, stopping at a number of points en route to inspect the work in progress on sections 2 and 1. Port Weller was left on special N., St.C. & T.R. cars at 5.30 p.m. over that line for St. Catharines, where dinner was taken, and Toronto was again reached at 10 p.m. The party was in charge of J.R.W. Ambrose, Chief Engineer, Toronto Terminals Ry. Co., and Chairman, Toronto branch, Can.Soc.C.E. They were met at Merritton by J.L. Weller, M.Can.Soc.C.E., Engineer in Charge, Welland Ship Canal, who spent the whole day with them going over the work, explaining many of its most interesting features and showing them every courtesy.

The canal construction has been very fully described in a number of articles in Canadian Railway and Marine World. Of the work inspected on the trip referred to, it may be mentioned that section 3 includes twin locks 4, 5 and 6, which are arranged in flight, and single lock 7, also a pair of guard gates just south of lock 7. An immense earth dam, with concrete core wall, extends from the head of the flight locks east to the escarpment and will form a pond of 84 acres. Section 2 includes locks 2 and 3, bridges 3, 4 and 5, two pond bridges, extensive water tight embankments and nearly three miles of canal prism. The new ship canal crosses the present canal on the level above lock 3. Section 1 includes the new harbor on Lake Ontario, lock 1, bridges 1 and 2 and about a mile of canal prism. The total length of the new canal will be about 25 miles and the estimated cost is \$50,000,000. The locks will be 800 x 80 ft., with a depth of 30 ft. over the sills. Each lock will have a lift of 46½ ft.

## Canadian Northern Railway Construction, Betterments. Etc.

**Quebec and Lake St. John Ry.**—We are officially advised that the company is building under the St. Charles and Huron River Ry.'s charter a line from Lorette station up the St. Charles River Valley to Stoneham, Que., at the mouth of Huron River, 7.5 miles. The line was located about two years ago by S. S. Oliver, and the location was revised early this year by — Morrison. A contract for grading has been let to a Quebec firm and grading is being done. The principal traffic on the line will be pulpwood. (May, 1912, pg. 231.)

**Canadian Northern Ontario Ry.**—The Board of Railway Commissioners has authorized the building of an interchange track with the C.P.R., near Ottawa.

The coal handling plants at Rideau Jct., Hornepayne and Capreol, on the Montreal-Ottawa-Port Arthur line, were reported, Nov. 12, to be practically completed.

The Port Arthur, Ont., City Council on Nov. 9 granted the company a year's extension of time to Mar., 1917, within which to connect up its tracks from Arthur St., with the main line at Current River.

**Canadian Northern Ry.**—The Board of Railway Commissioners has authorized the opening for traffic of the line between Grand Marais and Birds Hill, Man., 50 miles. It was authorized to be opened temporarily in February last. An extension to Victoria Beach, 14 miles, is reported to have been graded.

We are officially advised that track has been laid on the line between Bienfait and Estevan, Sask., 8 miles. An order has been made by the Board of Railway Commissioners authorizing its opening for traffic.

The Board of Railway Commissioners has approved of revised location of a branch line through sections 3, 4 and 5, tp. 35, range 7, east 2nd meridian, Saskatchewan, mileage 83.99 to 87.71.

We are officially advised that grading is being done on the line projected from Calgary to MacLeod, Alberta.

We are officially advised that grading has been carried on this year on the line from Oliver towards St. Paul de Metis, Alta. A press report states that over 100 miles of grading will be completed by the end of the year on this line, which as at present projected will be 117 miles long.

**Canadian Northern Pacific Ry.**—The Minister of Railways for British Columbia has issued a certificate authorizing the opening for traffic of the line from the summit of the Yellowhead Pass, on the eastern boundary of the province, to Port Kells, 491 miles. To secure a connection with New Westminster the company acquired the Great Northern Ry.'s Port Kells branch from the southern end of the New Westminster bridge to Port Kells, 8.3 miles. These two mileages total 499.3 miles, practically agreeing with the total of 499 miles given in the table of distances from New Westminster bridge to Yellowhead, given in our Oct. issue on pg. 370. From the bridge to New Westminster and Vancouver the company's trains run on the Great Northern tracks under an agreement.

The Minister of Railways for British Columbia has approved of plans for the erection of protective shed where needed along the line to protect the track from rolling gravel and disintegrated rock.

The report that an order has been given for two car ferries is incorrect. One has been ordered and full particulars of it are given in the Marine Department of this issue.

**Vancouver Terminals.**—We are officially advised in connection with the terminal

work in progress at Vancouver, that the present contract covers the erection of a sea wall, located 300 ft. west of Main St. bridge, for the purpose of enclosing the head of False Creek, which is being reclaimed by the company for the purpose of its terminals. This contract has been let to A. G. Creelman and Sons, Vancouver, and covers the building of a reinforced concrete sea wall, with two slips for the accommodation of steamships. It is expected that the work can be completed in five or six months. The reclamation work on False Creek itself is being carried on by the Pacific Dredging Co., which is dredging a channel for the Dominion Government from Main St. to English Bay. The material dredged from this channel is being deposited on the False Creek flats, through a pipe line. The C.N.R. has at present an area of 64 acres, contained within a temporary bulkhead completely filled in and ready for the laying of tracks. It was intended to erect a temporary station and freight sheds on this area pending the completion of the remaining filling, and the erection of the permanent station buildings, but owing to a change in policy this work has been suspended pending negotiations being completed with the Great Northern Ry.

**Lines on Vancouver Island.**—Rails sufficient for the 16 miles between Victoria and Patricia Bay are reported to have been delivered, for immediate laying. Provincial Government officials are reported to have stated, Nov. 4, that the line would be ready for operation within three months; that tracklaying on the line from Victoria to Alberni would be started early next spring, and that a contract had been let for two car ferries to be operated between Patricia Bay and the mainland. The landing piers at Patricia Bay and on Lulu Island will, it is reported, be put under contract as soon as the ferry plans reach Vancouver. The connecting line with the ferry slip at Lulu Island starts off from the north end of the New Westminster bridge, follows along the North Arm, and crosses over to Lulu Island at the easterly apex of the triangle, and is then continued to road 5 near Ladner's Ferry. Steel is reported to have been laid on a portion of the line, which it is proposed to extend to the canneries at Steveston. (Nov., pg. 424.)

**Vancouver Branch United Yardmasters' Association.**—A branch of the United Yardmasters' Association was organized in Vancouver, B.C., No. 1, with the following officers:—President, D. Nicks, General Yardmaster, C.P.R.; Vice President, D. Robinson, General Yardmaster, Great Northern Ry.; Treasurer, R. V. Mills, Yardmaster, British Columbia Electric Ry.; Secretary, S. M. Willis, Chief Clerk, C.P.R. Yardmaster's office, Coquitlam.

The C.P.R. trains heretofore running between Lethbridge and Cardston, Alberta, are now being run through to Calgary, via MacLeod, with stopover privileges at Lethbridge. The train heretofore running between Medicine Hat and Calgary, only runs as far as Aldersyde, connecting there with the Cardston-Calgary train.

### THE VICTORIA ROLLING STOCK & REALTY CO., OF ONTARIO, LIMITED.

Notice is hereby given that a dividend of three and a half per cent. on the paid-up capital stock of the Company for the half-year ended Nov. 30th, 1915, has been declared payable Dec. 1st, 1915, to the shareholders on record as of the 30th of Nov., 1915.

By order of the Board.

G. T. CHISHOLM, Secretary.  
Toronto, Nov. 20th, 1915.

## Alberta Public Utility Commissioners.

G. H. Bulyea, who has been appointed chairman, Alberta Public Utilities Commission, was born at Gagetown, N.B., Feb. 17, 1859, and was educated at Queens County Grammar School, Gagetown, and at the New Brunswick University, graduating B.A. therefrom in 1878. After teaching in the Sunbury County Grammar School, he moved to Manitoba in May, 1882, and in March, 1883, to Qu'Appelle, Sask., where he engaged in mercantile business. He was elected a member of the Northwest Council in 1884, and in 1898 was appointed Administrator of the Yukon District, remaining in that position only a few months. He was re-elected to the Northwest Council at the next general election, being subsequently appointed Minister of Agriculture; and in Feb., 1903, was appointed Minister of Public Works. On the creation of the province of Alberta, he was appointed Lieutenant-Governor, Sept. 1, 1895, and was re-appointed for a second term which expired recently.

J. Stocks, the second member of the commission, was born at Sherrington, Que., in 1858, and spent his younger days in the vicinity of Sherbrooke, Que. In 1881 he entered the employ of a construction company, which subsequently became merged with C.P.R. interests; and he went to the West in that service. After a couple of years as foreman of construction, he obtained promotion and subsequently was Superintendent of Construction and Maintenance on the C.P.R. from Swift Current to Laggan. In 1901 he was appointed Assistant Chief Engineer for the old Northwest Territorial Government, subsequently succeeding to the office of Deputy Minister of Public Works, which he held until the formation of the province of Alberta, in 1905, when he was appointed Deputy Minister of Public Works for that province, a position he has now resigned to take up his new duties.

A. A. Carpenter, the legal member of the commission, was born at Hamilton, Ont., Sept. 3, 1873, and was educated at Hamilton Collegiate Institute and Toronto University. He practised law in Hamilton from 1897 until his removal to Alberta in 1903. He was appointed judge of the district court at MacLeod in 1907, and was subsequently moved to Calgary, where he still resides.

**Detroit River Tunnel Construction Suit.**—D. C. McBean, civil engineer, New York, is suing the Detroit River Tunnel Co. (Michigan Central Rd.), for \$2,000,000 royalties for alleged infringement of patents utilized in the construction of the Detroit River tunnel. His claim states that he attempted to build a tunnel under the Detroit River in 1872, but owing to changing currents and chemical gases the project was abandoned, and asserts that his experience and investigation at that time made the present construction possible, and that the company had profited by his patents.

**Canadian Northern Ry. Bridges.**—In the illustrated article on the C.N.R. bridges over the Carp, Mississippi and Ottawa Rivers and Stoney Creek, on pages 453 and 454 of this issue, it should have been stated that Canadian Railway and Marine World is indebted for the photographs from which the four illustrations were made to W. P. Chapman, M.Can.Soc.C.E., Engineer of Bridges, Mackenzie, Mann & Co., Ltd., under whose direction the bridges were designed and their erection inspected.

**Eastern Rates Case.**—An Ottawa press despatch says that a decision on the railway companies application to advance freight rates will be given by the Board of Railway Commissioners in the near future.

# Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**Canadian Government Railways.**—W. P. HINTON, Traffic Manager, Grand Trunk Pacific Ry., has also been appointed Western Traffic Manager, Canadian Government Railways. Office, Winnipeg.

Capt. C. T. KNOWLTON has been appointed Superintendent of Ferries, in charge of floating equipment. Employees on all floating equipment report to, and receive instructions from him, and he reports to the General Superintendent, Intercolonial Ry. Office, Moncton, N.B.

A. R. MACGOWAN, Division Engineer, has had his jurisdiction changed to cover Districts 3 and 4, Intercolonial Ry., and the Prince Edward Island Ry. Office, Moncton, N.B.

H. T. RUHL, heretofore Resident Engineer, Intercolonial Ry., New Glasgow, N.S., has been appointed Division Engineer, Canadian Government Railways, with jurisdiction over Districts 1 and 2, I.R.C., and District 5, National Transcontinental Ry. Office, Moncton, N.B.

See also Intercolonial Ry. and National Transcontinental Ry.

**Canadian Northern Ry.**—A. ANGSTROM has been appointed Naval Architect. Office, Toronto.

W. H. GRANT, in addition to his duties as Manager of Construction, Mackenzie, Mann & Co., Ltd., has been appointed Tie and Timber Agent, Lines East of Port Arthur, Ont. Office, Toronto.

A. M. YUILL, heretofore Tie and Timber Agent, has been appointed General Tie and Timber Inspector, reporting to the Tie and Timber Agent, Eastern Lines. Office, Toronto.

J. H. McALPINE, heretofore District Master Mechanic, Parry Sound, Ont., has been appointed Master Mechanic, Ontario Division, and his former position has been abolished. Office, Toronto.

W. C. MOORE, heretofore District Master Mechanic, Trenton, Ont., has been appointed Assistant Master Mechanic, Ontario Division, and his former position has been abolished. Office, Toronto.

H. J. PAGE has been appointed Chief Special Agent, Lines East of Port Arthur, reporting to the General Manager, Eastern Lines. Office, Toronto.

G. H. HEDGE, heretofore Master Mechanic, Central Division, Winnipeg, has been appointed General Master Mechanic, Western Lines. Office, Winnipeg.

All communications are addressed to the office of the Superintendent of Rolling Stock, Winnipeg, as heretofore.

H. A. ENGLISH, heretofore Locomotive Inspector, Winnipeg, has been appointed Master Mechanic, Central Division, vice G. H. Hedge, promoted. Office, Winnipeg.

The position of Locomotive Inspector, heretofore occupied by him, has been abolished. All matters pertaining to the examination and engagement, or promotion of locomotive men and their general seniority rights, will be handled by the General Master Mechanic, Western Lines. All communications are addressed to the office of the Superintendent of Rolling Stock, Winnipeg.

H. L. VERCOR has been appointed Special Engineer, Lines West of Port Arthur, Ont. Office, Winnipeg.

W. T. MOODIE, heretofore Engineer Maintenance of Way, Winnipeg, has been appointed Division Engineer, Central Division. Office, Winnipeg.

T. LUCAS, heretofore Engineer of Maintenance of Way, west of Winnipeg, has been appointed Lease Engineer, Lines West of Port Arthur, Ont. Office, Winnipeg.

H. P. BLAKE, heretofore Superintendent of Water Supply and Heating, has had his title changed to Engineer Water Supply and Heating. Office, Winnipeg.

W. A. WHYTE, heretofore City Freight Agent, Calgary, Alta., has been appointed District Freight Agent, Regina, Sask., vice B. R. Marsales, transferred.

T. J. BROWN, heretofore Chief Dispatcher, District 1, Central Division, Port Arthur, Ont., has been appointed Superintendent, District 2, Western Division, vice B. T. Chappell, transferred. Office, Saskatoon, Sask.

A. MacRAE is reported to have been appointed Chief Dispatcher, District 2, Western Division, vice J. W. Crane, transferred. Office, Saskatoon, Sask.

A. CAMPBELL, heretofore in the General

G. H. Hedge,  
General Master Mechanic, Western Lines  
Canadian Northern Railway.

Freight Office, Winnipeg, has been appointed City Freight Agent, Saskatoon, Sask., vice H. S. Grainger, transferred.

B. R. MARSALES, heretofore District Freight Agent, Regina, Sask., has been appointed District Freight Agent, Calgary, Alta., vice A. Brostedt, transferred.

R. E. JOHNSTON, heretofore City Freight Agent, Edmonton, Alta., has been appointed City Freight Agent, Calgary, Alta., vice W. A. Whyte, transferred.

A. T. FRASER, heretofore District Engineer, Edmonton, Alta., has been appointed Division Engineer, Western Division. Office, Edmonton, Alta.

H. S. GRAINGER, heretofore City Freight Agent, Saskatoon, Sask., has been appointed City Freight Agent, Edmonton, Alta., vice R. E. Johnston, transferred.

D. R. CAMPBELL, heretofore Superintendent of Construction, Western Lines, has been appointed General Superintendent, Pacific Division. Office, Vancouver.

A. BROSTEDT, heretofore District Freight Agent, Calgary, Alta., has been appointed District Freight and Passenger Agent, Vancouver, B.C.

B. T. CHAPPELL, heretofore Superintendent, District 2, Saskatoon, Sask., has been appointed Superintendent, Pacific Division. Office, Kamloops Jct., B.C.

J. W. CRANE, heretofore Chief Dispatcher, District 2, Saskatoon, Sask., has been appointed Chief Dispatcher, Pacific Division. Office, Kamloops Jct., B.C.

C. H. QUANTIC, heretofore Master Mechanic and Trainmaster, Northern Construction Co. in British Columbia, has been appointed Master Mechanic, Pacific Division, C.N.R. Office, Port Mann, B.C.

**Canadian Pacific Ry.**—J. McNAUGHT, Solicitor, Montreal, has been granted extended leave of absence, and has gone to England, to enlist for active service.

GORDON ST. GEORGE SPROULE has been appointed Engineer of Tests, vice E. B. Tilt, resigned. Office, Montreal.

C. H. TOWLE has been appointed Assistant Superintendent, District 1, Atlantic Division, vice I. B. Merriman. Office, Brownville Jct., Me.

K. D. JOSEPH has been appointed Assistant Trainmaster, District 1, Atlantic Division, Brownville Jct., Me.

J. BOYD has been appointed Car Foreman, Trenton, Ont., vice W. Walsh, transferred.

W. WALSH, heretofore Car Foreman, Trenton, Ont., has been appointed Car Foreman, Union Station, Toronto, vice J. E. Hughes, transferred.

J. BANNON, heretofore Car Foreman, Lambton, Ont., has been appointed Car Foreman, West Toronto.

E. J. MURPHY, heretofore Assistant Locomotive Foreman, Lambton, Ont., has been appointed Locomotive Foreman there, vice F. Ronaldson, whose appointment as District Master Mechanic, Farnham, Que., was announced in our last issue.

J. TREGASKIS, heretofore fitter, has been appointed Assistant Locomotive Foreman, Lambton, Ont., vice E. J. Murphy, promoted.

J. JOLLY has been appointed Car Foreman, Lambton, Ont., vice J. Bannon, transferred.

The duties of the Resident Engineer at Sudbury, Ont., hitherto carried out by H. J. Black, whose appointment to other service was announced in our last issue, have been absorbed in those of H. R. MILES, Assistant Division Engineer, Lake Superior Division, North Bay, Ont.

J. E. HUGHES, heretofore Car Foreman, Union Station, Toronto, has been appointed Car Foreman in charge of general repairs, North Bay, Ont., vice J. Cowley, on extended leave of absence.

C. H. FOX, heretofore Assistant Division Engineer, Winnipeg, has been appointed Resident Engineer, District 2, Manitoba Division, vice E. L. Landorph, appointed Resident Engineer, District 1, Manitoba Division, Kenora, Ont., as announced in our last issue, and his former position has been abolished. Office, Winnipeg.

F. PATERSON, heretofore relieving station master, Winnipeg, has been appointed station master there.

W. B. RUFF, heretofore relieving station master, Winnipeg, has been appointed night station master there.

S. A. PIGGOTT, heretofore Foreman, Repair Yard, Winnipeg, has been appointed Car Foreman, Moose Jaw, Sask., vice R. Cooper, resigned.

J. H. BAKER, heretofore Roadmaster, Medicine Hat, Alta., has been appointed Roadmaster, Crownsnest Subdivision, vice J. Carlson. Headquarters, Lethbridge, Alta.

D. G. MacDONALD, heretofore Locomotive Foreman, Macleod, Alta., has been appointed

**A. H. Hall**, Foreman, Lethbridge, Alta., vice A. Hall, assigned to other duties.

**S. PRASER**, heretofore Locomotive and Car Foreman, Coronation, Alta., has been appointed Locomotive Foreman, Macleod, Alta., vice D. G. Macdonald, transferred.

**P. S. BEATT**, heretofore machinist, Ogden, Alta., has been appointed Locomotive and Car Foreman, Coronation, Alta., vice S. Praser, transferred.

**A. H. NOWELL**, heretofore Erecting Shop Foreman, Ogden, Alta., has been appointed Locomotive Foreman, Cranbrook, B.C., vice J. M. Boyes, assigned to other duties.

The position of Storekeeper, British Columbia Lake and River Service, Nelson, B.C., heretofore held by G. W. COOPER, has been abolished and he has been assigned to other duties.

**Canadian Pacific Ocean Services, Ltd.** Capt. J. V. FORSTER, R.N.R., heretofore Marine Superintendent, C.P.R. steamships, Liverpool, England, has been appointed General Superintendent, Canadian Pacific Ocean Services, Ltd., formed by the C.P.R. steamships and the Allan Line. Office, Liverpool, Eng.

**Delaware and Hudson Co.**—C. A. DOUGLASS has been appointed Manager, Hotel and Dining Service Department, vice A. Thieriot, deceased. Office, Albany, N.Y.

**Grand Trunk Ry.**—W. S. COOKSON, heretofore Assistant General Passenger Agent, has been appointed General Passenger Agent. Office, Montreal.

**C. W. JOHNSTON**, heretofore Assistant to Passenger Traffic Manager, has been appointed Assistant General Passenger Agent, vice W. S. Cookson, promoted, and his former position has been abolished. Office, Montreal.

**J. H. GUESS**, General Purchasing Agent, Montreal, having been granted leave of absence until the end of the year, the department is in charge of R. JOHNSON, Assistant General Purchasing Agent.

**W. WALKER**, heretofore Assistant Engineer, Ottawa Division, Ottawa, Ont., has been appointed Assistant Land Commissioner. Office, Montreal.

**G. F. WOODSUM**, heretofore Locomotive Foreman, Island Pond, Vt., has been appointed Assistant Shop Foreman, Portland, Me.

**R. GARDINER**, heretofore charge hand, Belleville, Ont., has been appointed Locomotive Foreman, Island Pond, Vt., vice G. F. Woodsum, transferred.

**E. WALTON**, heretofore clerk, has been appointed chief clerk to Superintendent of Transportation, Montreal, vice C. M. Walton, promoted.

**C. M. WALTON**, heretofore chief clerk to Superintendent of Transportation, Montreal, has been appointed Assistant Trainmaster, Districts 1 and 2, Montreal Division. Office, Island Pond, Vt.

**H. MOWAT**, heretofore instrument man, Belleville, Ont., has been appointed Assistant Engineer, Ottawa Division, vice W. Walker, promoted. Office, Ottawa, Ont.

**G. A. STOKES**, heretofore Division Agent, Ontario Lines, Toronto, has been appointed Superintendent of Sarnia Tunnel Terminals, vice F. J. McKee, promoted. Office, Port Huron, Mich.

**F. J. MCKEE**, heretofore Superintendent of Sarnia Tunnel Terminals, Port Huron, Mich., has been appointed Assistant Terminal Superintendent of Detroit Terminals. Office, Milwaukee Jct., Mich.

**Grand Trunk Pacific Ry.**—W. P. HINTON, heretofore Assistant Passenger Traffic Manager, G.T.R. and G.T.P.R., Montreal, has been appointed Traffic Manager, G.T.P.R. and Grand Trunk Pacific Coast Steamship Co., in charge of freight and passenger traffic, and the positions of Passenger Traffic Manager, heretofore held by G. T. Bell, Mont-

real, and Assistant Passenger Traffic Manager, heretofore held by W. P. Hinton, Montreal, have been abolished. Office, Winnipeg. G. T. Bell continues as Passenger Traffic Manager, G.T.R., Montreal.

**G. A. McNICHOLL**, heretofore Commis-

W. R. Devenish, A.M.Can.Soc.C.E., Superintendent, District 2, Intercolonial Railway.

C. W. Johnston. Assistant General Passenger Agent, Grand Trunk Railway.

sioner of Colonization and Industries, Prince Rupert, B.C., has been appointed Assistant General Freight and Passenger Agent, G.T.P.R. and Grand Trunk Pacific Coast Steamship Co., with jurisdiction west of Prince George, B.C., and Pacific coast points, Portland, Oregon, and north, including Alaska

and Yukon, and his previous position has been abolished. Office, Prince Rupert, B.C.

**Great Northern Ry.**—C. L. BANKSON has been appointed Assistant Purchasing Agent, vice A. Watson. Office, Seattle, Wash.

**Intercolonial Ry.**—W. R. DEVENISH, A.M.Can.Soc.C.E., heretofore Principal Assistant Engineer, Canadian Government Railways, Moncton, N.B., has been appointed Superintendent, District 2, vice Evan Price, deceased. Office, Campbellton, N.B.

**W. R. FITZMAURICE**, Assistant Superintendent, Moncton-St. Flavie District, Newcastle, N.B., who has been acting as Superintendent, District 2, Campbellton, N.B., since the death of Evan Price, has resumed his former position.

**C. D. BOVARD**, station agent, Moncton, N.B., who was appointed recently acting Assistant Superintendent, Moncton-St. Flavie District, Newcastle, N.B., during the absence of W. R. Fitzmaurice, has returned to Moncton, N.B.

**P. CARLISLE** has been appointed Roundhouse Foreman, Moncton, N.B., vice J. E. Stronach, now employed as locomotive driver.

**F. CARROLL**, heretofore charge hand, frog shop, has been appointed Foreman Blacksmith, Moncton, N.B., vice A. Stockall, retired on the Provident Fund.

**S. B. WASS**, A.M.Can.Soc.C.E., Assistant Superintendent, District 2, has had his jurisdiction extended to include the Fredericton and Loggieville Subdivisions. Office, Fredericton, N.B.

**T. RYAN** has been appointed Roundhouse Foreman, Riviere du Loup, Que., vice V. Saindon, assigned to other duties.

**V. SAINDON**, heretofore Roundhouse Foreman, Riviere du Loup, Que., has been appointed charge hand there.

See also Canadian Government Railways.

**Kent Northern Ry.**—T. O. MURRAY, heretofore Manager, Richibucto, N.B., has resigned.

**National Transcontinental Ry.**—The Grand Trunk Pacific Telegraph Co. has been appointed Supervisory Agent of Telegraphs between Moncton and Winnipeg, including the Lake Superior Branch to Fort William, with jurisdiction over all matters appertaining to the construction and maintenance of telegraph and telephone lines and the operation of railway and commercial telegraphs. Following are the G.T.P.T. Co.'s officers having jurisdiction.—H. HULATT, Manager of Telegraphs, and T. RODGER, Supervisor, Montreal; F. T. CALDWELL, Division Superintendent of Telegraphs, Winnipeg.

See also Canadian Government Railways.

**Pere Marquette Rd.**—A. C. RHODES has been appointed Auditor of Station and Miscellaneous Accounts, vice S. T. Billingsly, resigned. Office, Detroit, Mich.

**Wabash Ry.**—E. F. KEARNEY, heretofore one of the receivers, and President, of the Wabash Rd., has been elected President, Wabash Ry., the successor of the old company. Office, St. Louis, Mo.

**W. S. PIERCE**, heretofore Chairman of the Board, Wabash Rd., has been elected Chairman of the Board, Wabash Ry. Office, New York, N.Y.

**J. E. TAUSSIG**, heretofore General Superintendent, Texas and Pacific Ry., Dallas, Tex., has been appointed Assistant to the President, W. Ry. Office, St. Louis, Mo.

The following general officers, who held similar positions under the Wabash Rd. Co., have also been appointed.—J. L. MINNIS, General Solicitor; S. E. COTTER, General Manager; F. L. O'LEARY, Local Treasurer; T. J. TOBIN, Auditor; W. C. MAXWELL, General Traffic Manager; T. J. FRIER, Purchasing and Supply Agent; and Dr. M. P. PARRISH, Chief Surgeon, all with offices at St. Louis, Mo.

## Freight and Passenger Traffic Notes.

All G.T.R. trains between Montreal and Ottawa now stop at St. Henri, Montreal.

Northern Pacific Ry. trains 19 and 20, between Winnipeg, Man., and St. Paul, Minn., were discontinued Oct. 24.

Canadian Pacific Ry. trains 61 and 62 between Winnipeg and Moose Jaw have been discontinued for the winter.

Canadian Pacific Ry. has withdrawn the Vancouver-Arrowhead and Penticton-Spences Bridge sleeping car service.

Canadian Pacific Ry. trains 63 and 64 between Calgary, Alta., and Spokane, Washington, have been discontinued for the winter.

The Canadian Northern ticket and freight office in Regina, Sask., has been moved from Scarth Ave. to the Western Trust Building, Eleventh Ave.

The Grand Trunk Pacific Ry., starting Nov. 24, added a tourist car to the equipment of its transcontinental trains running in and out of Prince Rupert, B.C.

The Board of Railway Commissioners has authorized a standard freight tariff of 3c. a mile on the Canadian Northern Ry. from Edmonton to Tollerton, Alta., and of 4c. a mile from Tollerton to Vancouver, B.C.

The Grand Trunk Pacific Ry. will until Dec. 31, issue from points on its lines, special round trip tickets to all Atlantic sea ports in connection with all transatlantic steamship lines.

Canadian Pacific Ry. trains 1 and 2 now carry first-class and colonist cars through between Montreal and Vancouver, and also haul the St. Paul-Seattle standard and tourist sleeping cars west of Moose Jaw.

The Canadian Northern Ry. through passenger train service between Toronto and Winnipeg was put in operation Nov. 1. Trains left each point on Nov. 1, and arrived at their respective destinations on Nov. 3.

The Minneapolis, St. Paul & Sault Ste. Marie and Canadian Pacific trains 13 and 14, between St. Paul, Minneapolis and the Pacific coast have been discontinued for the winter. Trains 1 and 2 now make the St. Paul and Minneapolis connections at Moos Jaw, Sask.

Canadian Pacific Ry. trains 3 and 4 no longer carry through standard and tourist sleepers for Montreal, on account of the withdrawal of trains 5 and 6 east of Sudbury, but haul a Winnipeg-Fort William standard sleeping car in addition to their other equipment.

Starting Nov. 2, the Edmonton, Dunvegan and British Columbia Ry. changed the time of its bi-weekly service from Edmonton to Macleannan, Alberta, from 7.30 a.m. to 8 p.m., and added a sleeping car to its train equipment. The corresponding train from Macleannan leaves in the evening as heretofore, and also has a sleeping car attached.

The Pacific Great Eastern Ry. winter train service from North Vancouver, as announced Nov. 1, will give an approximately hourly service to Dundarave during the business hours morning and evening; two trains daily each way between North Vancouver and Whytecliffe, and three trains a day each way between North Vancouver and Caul fields.

Canadian Pacific Ry. passengers between Smiths Falls, Carleton Place, Ont., and points east thereof to Port Arthur, Ont., and points west thereof, may now travel either via main line through Renfrew and North Bay, or via Toronto and Sudbury, but must designate which route they desire at

time of purchase, and tickets must read accordingly.

Canadian Pacific Ry. trains 5 and 6, between Montreal and Sudbury, connecting at Sudbury with trains 3 and 4, have been withdrawn for the winter. Passengers between Montreal and Port Arthur or points beyond can leave Montreal in the morning by train 19 and connect at Toronto with train 3, but east bound train 4 does not make connection at Toronto with day train for Montreal and beyond.

The G.T.R. is enforcing an order under which passengers must show their tickets to the conductor or brakeman before entering the train on which they are to travel. In the larger stations the train staff occupy positions in front of the car steps to attend to this work, but on local trains, and between points, one or other will stand on the platform so as to command the entrance to two cars.

The Pere Marquette Rd. states in connection with the London & Port Stanley Ry. that in consequence of the line having been taken over by the City of London it entirely withdrew from its operation on July 1 and made an interchange arrangement for the L. & P.S.R. to handle its traffic for points between London and Port Stanley. The Pere Marquette trains enter the same station (Kains St.) at St. Thomas as is used by the L. & P.S.R.

The G.T.R. has cancelled the following trains:—Leaving Montreal for Vaudreuil 1.20 p.m. on Saturdays; leaving Montreal 1.30 daily except Saturday and Sunday for Pointe Claire; leaving Montreal 4.10 p.m. daily except Sunday for Pointe Claire; with the corresponding trains on the same days into Montreal; leaving Montreal daily except Sunday for Rouse's Point and Plattsburg via. Dolson Jct., and Delaware and Hudson Rd., with the corresponding train from Plattsburg arriving in Montreal 9.35 a.m.

The Board of Railway Commissioners has approved a standard sleeping and parlor car tariff for the Edmonton, Dunvegan and British Columbia Ry. The rates for a lower berth are 8 mills a mile, with a minimum charge of \$1.50, while the charge for the upper berth is to be 80% of that for lower berths, with a minimum charge of \$1.25; the drawing room fare is 3½ times that for the lower berth, with a minimum charge of \$6; seats in parlor cars two-thirds of a cent a mile, with a minimum fare of 25c.

The Canadian Pacific Ry.'s trains 19 and 20, "The Canadian," between Montreal and Chicago, now carries Mount series compartment observation cars, instead of Glen series, between Toronto and Chicago only, instead of between Montreal and Chicago, and library observation parlor cars between Montreal and Toronto. Trains 21 and 22 carry Mount series compartment observation cars instead of Glen series between Montreal and Toronto. Mount cars each contain one drawing room and three compartments with no smoking room. Glen cars contain one drawing room, one compartment and a smoking room.

The Mayor and the President and Vice President of the Quebec Board of Trade of Quebec waited on the Dominion Government with a number of other business men, Nov. 2, to ask for lower freight rates on the National Transcontinental Ry. to Quebec as compared with Montreal, and for a passenger train service between Quebec and Cochrane. The deputation asked for a freight tariff between Quebec and Winnipeg and intermediate points based on mileage as compared with existing Montreal rates, and

a tri-weekly passenger train service between Quebec and Cochrane connecting with, and equal in speed and equipment to the service given between Cochrane and Winnipeg. These claims it was stated were endorsed by the Halifax and St. John Boards of Trade.

## Railway Finance, Meetings, Etc.

**Canadian Northern Ry.**—The directors have announced that the earnings for the year ended June 30 were insufficient to enable payment to be made of the interest, which was due, Nov. 2, on the 5% income charge convertible debenture stock.

**Canadian Pacific Ry.**—There has been deposited with the Secretary of State at Ottawa copy of a lease by the Shuswap and Okanagan Ry. of its line to the C.P.R.

A duplicate copy of an indenture dated Sept. 22, made between Sir Charles Tupper, Sir Thomas Skinner and G. McL. Brown on the one part and the C.P.R. on the other has been filed with the Secretary of State at Ottawa. The deed releases and discharges a mortgage entered into July 25, 1885, between the C.P.R. and Baron Wolverton, Baron Revelstoke, and Sir Charles Tupper as trustees, for the purpose of securing C. P.R. first mortgage bonds for \$35,000,000, and reconveys to the company the railway and other property specifically mentioned as security.

**Canadian Pacific Ry.**—The directors on Nov. 8 declared a dividend of 2½% on the common stock for the quarter ended Sept. 30, being at the rate of 7% per annum from revenue and 3% per annum from special income account, payable Dec. 1, to shareholders of record on Nov. 30.

**Grand Trunk Ry., Montreal press dispatch.**—Blair & Co., of New York, have purchased from the G.T.R. and resold, \$4,000,000 two year 5% notes, dated Nov. 1, 1915. Principal and interest are payable in Montreal or New York, at the holders' option. The notes are a direct obligation of the G.T.R., and are specifically secured by pledge with the Bankers' Trust Co. trustee of \$5,254,632 in Grand Trunk Pacific Railway 4% sterling mortgage bonds due Jan. 1, 1962.

**Temiscouata Ry.**—Net earnings for August \$3,234 against \$3,667 for Aug. 1914. Aggregate net earnings for two months ended Aug. 31, \$7,035.

**The Wabash Ry. Co.** has been incorporated in the State of Indiana, with a capital of \$143,460,000, and the Equitable Trust Co. of New York has been ordered by the Federal District Court at St. Louis, Mo., to turn over the entire property purchased recently at the foreclosure sale for \$18,000,000, to the reorganization committee. The directors for the first year are,—S. Armstrong, H. B. Campbell, R. Golet, L. Greer, E. F. Kearney, W. C. Maxwell, G. W. Murray, R. H. Neilson, J. C. Otteson, W. S. Pierce, L. Rhoades, A. E. Stuart, W. V. Stuart, J. E. Taussig and H. R. Winthrop. The new company has been refused permission to carry on its business in Missouri, as under a statute of 1913, it is provided that no company not registered under Missouri laws can be authorized to carry passengers or freight from one part of the state to another. A speedy settlement of the matter is anticipated, and in the meantime the company is operating under its constitutional rights.

**The G.T.R. Barrie Division Railwaymen's Patriotic Association** has voted \$600 to the Fields Comfort Commission, and \$200 to the British Red Cross Association. Two motor ambulances, valued at \$3,600, have already been given to the Canadian Red Cross Society.

# Electric Railway Department

## Rolling Stock for Three Rivers Traction Company.

The Three Rivers Traction Co., which has built a circuit electric railway in Three Rivers, Que., and has a suburban line projected to Cap de la Madeleine, a total length of about seven miles, has received recently

ency exit door controlled by the motorman from his position in the front vestibule. There is a circular seat running around the rear vestibule which accommodates five passengers. The seats are the builder's

push buttons and buzzers, the current being procured from batteries.

The cars are heated with cross seat heaters with ten heaters per car. The cars are mounted on radiax trucks, 12 ft. wheel base, with 33 in. cast iron wheels and 4½ in. hot rolled axles. Each car is equipped with two Westinghouse 121-B-2 motors, with 1 K-10 controller, Westinghouse schedule S-M-1 straight air brake equipment. H-B life guards, and the Trolley Supply Co.'s Ideal trolley catcher. The bodies are painted olive green with gold lettering and striping.

The combination sweeper and tower car is the builder's standard single truck sweeper with a tower built on one end. The body or cab is of wood construction, built on a heavy wood underframe, which is reinforced with heavy steel plates. The roof is of the turtle back type, supported on steel carlines. The interior of the body is in ash, natural finish. The truck is the builder's standard design, which is extra heavy. The brooms and broom operating machinery are of the builder's standard construction. The brooms are mounted on a heavy shaft, which runs in bearings which slide up and down in heavy malleable iron guides. They are driven by a heavy chain and sprocket drive from a main driving shaft, which is directly connected to the motor by a gear and pinion drive, having the same gear ratio as the truck motors. Each set of brooms can be cut in or out by clutches on the main driving shaft. The brooms are raised and lowered by hand winches in the cab, a separate

Three Rivers Traction Co.'s Passenger Car.

six single end, single truck, one man, near side cars, and a single truck combination sweeper and tower car, from the Ottawa Car Manufacturing Co. The general dimensions of the passenger cars are as follows:

Length of body .....	21 ft.
Length of front vestibule .....	6 ft. 2 ins.
Length of rear vestibule .....	4 ft.
Length over all .....	32 ft. 2 ins.
Width over all .....	8 ft. 6 ins.

The car bodies are of semi-convertible type, wood construction, built specially for one man, near side operation, and single end control. The sides are straight and sheeted vertically with narrow tongue and groove poplar sheeting. There are eight double sash windows on each side of the body. Top sash are made stationary and bottom sash made to raise to open. The roof is of arch type, with ventilators in each side, also one in front vestibule. The underframe is of composite construction, having wood sills reinforced with steel plates, which are rivetted together to form a complete steel frame. The flooring is ¾ in. thick tongue and groove, hard yellow pine covered, with hardwood floor matting laid lengthwise in the aisle. The interior trimming is red cherry. The front vestibule is made extra long and step opening extra wide, so that entrance and exit can be made by same. Each opening has an individual folding door and step of the builder's standard construction, so arranged that when the motorman opens the door, the step drops, and when he closes the door the step folds up. The doors are arranged so that the motorman can operate them singly or both together.

The front vestibule is equipped with brass p.a.y.e. rails, folding curtain behind motorman, and the Coleman Fare Box Co.'s no. 4 type of stationary fare box. The rear vestibule is circular in shape, with an emerg-

Three Rivers Traction Co.'s Passenger Car.

standard stationary type, covered with twill weave rattan and with brass grab handle on back. The curtains are pantasote mounted on metal rollers. The cars are also equipped with the builder's standard

winch being provided for each set of brooms. The tower has a working platform about 6 ft. by 5 ft. wide, with a folding fence all around it. The tower is raised and lowered by a heavy winch inside the

cab. The brooms are driven by one Westinghouse 101-B-2 motors. The truck is equipped with a Westinghouse 101-B-2 motors. The truck is equipped with a Westinghouse 101-B-2 two motor double end equipment, with K-11 controllers on the truck motor circuit and a R-28 controller on the broom motor circuit. The body is painted olive green with gold numbers, the tower is finished naturally, and the truck is painted black.

### A Public Utilities Commissioner on Thoughtless Complaints.

In the Manitoba Public Utilities Commission's report for the year ended Mar. 30, 1914, only issued recently, the sole Commissioner, H. A. Robson, who has now resigned to re-enter the practice of law, as General Counsel for the Union Bank of Canada, says:—

"There have been many applications to this Commission by way of complaints against street railway transportation systems. Some of these applications have been lodged by the municipal authorities as representing the public. The companies involved are the prominent street railway utility, the Winnipeg Electric Ry. Co., and its associated companies, the Winnipeg, Selkirk and Lake Winnipeg Ry. Co. and Suburban Rapid Transit Co. These complaints fall under two heads. One class embraces troubles due to the act or neglect of individual employees. The companies are responsible for the conduct of their servants. Street railway operation requires a great number of men. The public are too apt to judge a whole system by isolated acts of the small percentage of men under standard, who, even with great care in selection, will always be found where a large number are employed. Complaints of this nature are dealt with as they arise. The companies deal with them promptly and insist upon proper discharge of duty by employees. Any one who would judge fairly of the operations of any public utility, and more especially street railway and telephone systems, must remember this human element. Taking our electric railway and telephone systems as a whole, any weaknesses of this nature are no more than exist in other systems, or in other labor employing undertakings, and are probably considerably less.

"The other class of applications affecting electric railways are those regarding improvements in the way of new lines, or equipment, or increased service. These demands are often made thoughtlessly. Improvements involving substantial capital expenditures are demanded without regard to financial possibilities or the likelihood of operating loss. The experience has been in municipalities outside of Winnipeg, first a demand for lower fares, regardless of rates defined in contracts, and then demands for construction of new lines or rebuilding existing ones or improving service. These rate reductions have been substantial, and have been granted by the companies after some pressure, but not altogether by compulsion. There is a want of appreciation of the fact that in sparse communities reduction of rates retards new construction and service improvement. It takes away the financial basis for a commission's order for new construction or improved service. There is a further tendency to look at the rate of dividend paid by the electric railway companies and draw conclusions superficially. To regulate a utility company so severely as to restrict its productiveness to a current commercial rate of interest, is to stifle this necessary class of enterprise.

These various considerations are frequently forgotten or deliberately overlooked by persons, sometimes in fact by elected representatives, who unwarrantably create discontent against what, considering rates and street facilities, is reasonable public service. A commission is bound to meet and deal with all these matters with a due regard to public service, but at the same time to withstand attempts to oppress a public utility through the medium of the commission. Applications before this Commission since its institution, some of which are described in this report, have produced many occasions of difficulty, because of circumstances such as those above described."

### The Outside Running Board on Toronto Railway Cars.

The Toronto Ry. applied to the Ontario Railway and Municipal Board, Nov. 1, for an order under sec. 107 of the Ontario Rail-

which the company operates its street cars."

Sec. 107 of the Ontario Railway Act, referred to in the application, is as follows,—

1. Open or summer cars for use upon a railway operated by electricity, or upon a street railway, shall be so arranged or constructed that the seats for passengers will face the front of the car when in motion, and an aisle sufficiently wide to allow the passage of the conductor shall be provided in every such car, and no open or summer cars shall be used unless so arranged.

2. The side steps on such cars shall be so constructed, if in the opinion of the Board it is practicable, that passengers will be prevented from standing upon the same while the car is in motion.

3. The Board may relieve a company from the obligation imposed by subsec. 1 as to any route upon which the space between the tracks, commonly called the devil strip, is not sufficiently wide to permit cars so arranged or constructed to be used.

4. In all cases of dispute between a railway company and a municipal corporation

Three Rivers Traction Co.'s Combination Sweeper and Tower Car.

way Act, relieving it from the operation of cars with seats facing front and with an aisle through the centre sufficiently wide for the passage of the conductor, owing to the inability of the company to operate such cars on account of the narrow devil strip. The Board issued the following order, Nov. 2,—“Upon hearing counsel for the applicants and respondents and the Board having been investigating the question of the change of the type of summer cars in use on the applicant's railway, and having conducted experiments and inspected the tracks and devil strips of the said railway company's system, and the Board being of the opinion that the space between the tracks, commonly called the devil strip, is not sufficiently wide to permit cars with seats for passengers facing the front with an aisle sufficiently wide to allow the passage of the conductor, the Board orders that the applicants be hereby relieved until a final disposition of this application, from the obligation imposed by sub-sec. 1, of sec. 107, Ontario Railway Act, to all routes upon

or any person making complaint to the Board, as to the sufficiency of width, practicability of construction of cars, or as to any other matter or thing mentioned in this section, the order of the Board shall be final and shall not be subject to appeal, and any order made by the Board as to any such matter shall be carried out and fulfilled by the company, and the municipal corporation or either or both of them according to its terms.

The Mayor of Toronto, in one of his characteristic interviews, has declared that the city will appeal to the Legislature.

The Ontario Railway and Municipal Board, on Nov. 22, issued an interim order abolishing the outside running board and directing the City of Toronto and the company to confer, within 30 days, as to the best type of car to be substituted, and if they fail to agree, then the city will be given an additional 15 days to suggest an alternative type of car. It was announced that the city would refuse to confer with the company on the matter.

### The Toronto-Railway Extension on North Yonge Street.

In compliance with the Ontario Railway and Municipal Board's order to the Toronto Ry. to extend its track from the end of its present track on Yonge St., Toronto, north-ward to Farnham Ave., the terminus of the Toronto and York Radial, the city, as has already been mentioned, has decided to appeal to the Imperial Privy Council against the Board's judgment, and has obtained full sanction for its bond for \$2,000 to prosecute such appeal. The Toronto Ry., on Nov. 1, applied to the Ontario Railway and Municipal Board for a further order to enforce the original order, and to compel the city to carry on and complete the preliminary work necessary for the laying of the tracks. It was argued on behalf of the company that the city's appeal to the Privy Council did not involve a stay of proceedings, and that the city should be compelled to proceed with the construction of the foundation. It was also stated that the company, if allowed to complete the laying of the track, would, if the Privy Council reversed the Board's judgment, be willing to turn over the extension to the city at cost.

The Chairman of the Board, D. M. McIntyre, K.C., stated that the validity of the Board's order rested on the construction of the agreement between the city and the company, and he did not think that the Board could facilitate the carrying out of the order, if there is any doubt as to the legal basis on which that order rests.

### Bion J. Arnold on Municipal Ownership.

Some of the reports of an address by Bion J. Arnold, of Chicago, before the American Electric Railway Association at San Francisco recently, made it appear that he favored the municipal ownership of electric railways, and believed such ownership inevitable. In a subsequent interview given to a Los Angeles paper, he stated that the reports which made him say that municipal ownership of utilities is inevitable are incorrect. He continued,—"What I did say was, Let us spend no more time worrying about whether immediate municipal ownership or ultimate municipal ownership is the thing the people want. Chicago once tried to get municipal ownership, but failed because the city could not raise the money, and a study of the indebtedness and bond limits of other cities present like conditions. Time will therefore settle whether the immediate municipal ownership or the ultimate municipal ownership plank, or neither, is to go into municipal platforms. The point I want to make is that we cease wasting our energies in opposing a public movement that will surely come, in spite of opposition, if it is economically sound, and direct our energies toward the terms of the purchase clause and the conditions of a resettlement franchise. It is time for us to prove to the courts and commissions that railway investment can be made practically as sound as what are termed savings bank investments. Several plans have been worked out, notably those which are included in my reports on Chicago, Kansas City and San Francisco. They differ somewhat in franchise conditions, but the central idea is to put tangible property behind intangible values, so that if ultimate municipal ownership should prove to be the policy of the country, it will come without destroying investment values, or curtailing service to the public during the time of its coming.

"The only advantage of municipal ownership and operation over private ownership, from a financial standpoint, is the ability of

a municipality, in most cases, to borrow money at a lower rate of interest than private corporations or individuals are willing to accept for their money when it is to be invested in public utilities. Therefore, if the municipality will operate an electric railway as efficiently and as economically as a private corporation, the municipally owned and operated railway will be the cheaper to the community. But the question is: Will the municipality so manage the property? Inasmuch as the margin is only the difference in the cost of money, it may easily be absorbed by inefficient management, through the loading of the municipally owned road with excessive operating expenses in the way of labor and other considerable items that may enter into the management. The San Francisco experiment is being watched closely and up to date it has been conducted and operated efficiently and honestly, although there has already been a tendency toward the construction of unprofitable extensions and toward a reduction of the fare. The question is whether the municipality will continue to manage the property as well as it has in the past. The advantages that I have pointed out above are purely theoretical advantages. I cannot emphasize this too strongly. In many cases they have proved to be no advantages at all in actual practice. The disadvantages of municipal ownership are too obvious and too well known to require reiteration."

### Transportation of Postmen in Sherbrooke.

The Post Office Department having refused to pay the compensation asked by the Sherbrooke Ry. & Power Co. for carrying postmen on its cars, they are now travelling on ordinary tickets the same as any other passengers. The company had a contract with the Department for four years from Sept. 1, 1911, to carry postmen at \$25 each per year. Prior to the expiry of this contract the Department was informed that a new one could not be entered into at less than \$35 per postman per year, and as that figure was not acceded to, the company refused to enter into a new contract.

The Department's contention that postmen should be carried at a less rate than any other passengers is an utterly indefensible one, as the Dominion Government has granted no aid whatever to electric railways and is not entitled to ask any favors from them. As a matter of fact, postmen with their mail bags, etc., generally take up more room than ordinary passengers, and they should certainly pay at least the same fare. There is no reason why Government employees should be carried at any less rate than the employees of any corporation or firm.

### Traffic Commission Proposed for Toronto.

—The Mayor of Toronto announced, Nov. 12, that the report of the engineers for a comprehensive street railway system which will provide for proper entrance for the radial lines, all to work in conjunction with the projected harbor improvements, was practically completed, and it was expected it would be submitted to the City Council about Dec. 1. He also stated that he would then advocate the appointment of a traffic commission to deal with the whole matter, and of this board, the engineers responsible for the report to be members. These are, F. A. Gaby, Hydro Electric Power Commission of Ontario; E. L. Cousins, Toronto Harbor Commission, and R. C. Harris, Commissioner of Works, City of Toronto.

### City of Toronto Sues Toronto Railway Company.

Claiming \$95,859 as its percentage of the Toronto Ry. receipts for May last, the city has entered an action at Osgoode Hall to recover the amount. The action is the sequel to some little difference between the parties over payments for track repairs, etc. The company some time ago presented a bill to the city for \$74,000 for road work, but the Works Commissioner refused to pay the full amount, and the city sent a cheque for \$52,000 in payment. This cheque the company refused to accept, and declined to pay the percentage on the revenue for May until the city agreed to pay the full amount of the account rendered.

The city has also issued a writ against the company claiming \$14,000 for cleaning snow off the track allowance last winter.

### The Jitney Situation in Canada.

The attention of the Montreal City Council has been called by Alderman Rubenstein to the franchise granted to the Canadian Autobus Co. At a recent meeting he asked if the council would call upon the company to fulfil the terms of the franchise, which was adopted in June, 1912. The litigation, initiated by a ratepayer, as to whether the council had the right to grant such a franchise, has been decided in the city's favor recently. The matter is still under the council's consideration. On Nov. 3, the Supreme Court of Canada granted leave to appeal against the decision referred to on condition that Robertson, the ratepayer taking the action, pay the costs incurred to date into court, within 10 days, and make his application to the Privy Council within 40 days thereafter.

The Toronto Police Commissioners have decided that after Jan. 1 every jitney must carry a plate, to be supplied by the commissioners, setting forth the fact that it is a "jitney," and the number of passengers it is licensed to carry.

It was reported, Nov. 1, that there were 450 jitney licenses in existence in Vancouver, B.C., and that bonds had been put up by the owners in respect of 350 of them. Ten drivers have been prosecuted recently for running their cars without having deposited the bonds required by the regulations. The Vancouver Juvenile Protective Association has passed a resolution asking for a regulation preventing women and girls being taken as passengers in jitneys at night.

A jitney bylaw is still under discussion at New Westminster, B.C., one of the points of difference being as to the amount of the bond to be put up by the owners of the cars. The question is whether the amount of the bond is to be \$1,500 for each car, or \$1,500 for each passenger. In this connection it is to be noted that in Los Angeles, Calif., the bond is for \$5,000 a car.

A number of jitney drivers in Victoria, B.C., who were fined, Nov. 3, for breaches of the bylaw regarding the operation of these cars, stated that they could not pay the fines imposed, and elected to go to jail. One of the drivers gave as a reason for the excessive speed of his car that he had to make a living.

**Toronto Eastern Ry.**—There has been deposited with the Secretary of State at Ottawa copy of a trust deed made between the company and the Guardian Trust Co., securing an issue of 30 year 5% debenture stock or bonds on certain of the company's lines.

## Hydro Electric Power Commission of Ontario's Radial Railway Projects.

Delegates representing a large number of the municipalities interested in the proposals made by the commission for building a number of radial electric railways in Ontario, met in Toronto, Oct. 27. The plans submitted covered a line from Toronto to Sarnia, via Port Credit, Milton, Guelph, Berlin, New Hamburg, Stratford, St. Marys, London, Strathroy, and Arcona. Sir Adam Beck, Chairman of the Commission, stated that the line was estimated to cost between \$10,000,000 and \$11,000,000, including the Dominion subsidy of \$6,400 a mile, which it was hoped would be voted. The Dominion Government was sympathetic, but the final decision rested with the Provincial Government. Once they were favorable the Dominion Government would do its duty. He urged that pressure be brought to bear upon the Government to the end that a declaration of policy might be obtained. Privately owned railways had been bonused, and the people's enterprises should be as generously treated. The actual cash would not be needed for two or three years, but it was necessary that the people know where the Government stands on this matter. The entrance into Toronto would be along the waterfront, and would carry passengers right to the market centre. The plan submitted was considered to be the most feasible one, but it might be changed to suit the circumstances, but it must be remembered that the line was projected, not for the benefit of any single municipality, but for the whole province. The acquirement of the Toronto Suburban Ry. from Toronto to Guelph had been suggested, but nothing had been done in regard to it. The delegates endorsed the proposal, and arranged that bylaws would be submitted at the coming municipal elections in the 15 municipalities interested between Toronto and Guelph.

Delegates from the municipalities through which the projected line will pass between Guelph and London, met at Guelph, Oct. 28, and those representing the municipalities between London and Sarnia, met at London, Nov. 2. They endorsed the general plans, and arranged for the submission of the bylaws necessary at the January election.

Chief Engineer Gaby laid the proposition before the City of Guelph, so far as it affects that city, Nov. 12, and before the city authorities of Berlin and surrounding municipalities, Nov. 13. It was stated that the City of Guelph would be asked to issue bonds for \$700,000; Guelph Township, \$325,000; City of Berlin, \$700,000; Town of Waterloo, \$125,000, and Waterloo Township, \$508,000.

At a meeting in Stratford, Nov. 11, a resolution approving of the plans suggested for that district was passed, and bylaws will be submitted at the January election. The City of London decided, Nov. 16, that its ratepayers should vote on a bylaw to raise \$1,000,000 for radial railway construction with the Toronto-Sarnia line. Meetings are being held in the other municipalities interested so that the ratepayers may have full information as to the proposition before the day of voting.

The routes selected by the H. E. P. Commission's engineers are as follows:

**Humber River-Port Credit section.**—From the west limits of the City of Toronto at the Humber River the line runs westerly parallel to and south of the G.T.R. main line. It crosses the Credit River about midway between the Lake Shore Road and the G.T.R.

**Port Credit-Milton section.**—Leaving Port Credit, the line crosses the G.T.R. about a

mile west. It then runs to 400 yds. north of Sheridan post office and thence direct to Milton.

**Milton-Guelph section.**—Crossing the C. P.R. west of that company's station at Milton the location runs to Lot 6, Con. 1, Esquering Tsp., thence to Lot 7, Con. 5, Nassagaweya Tsp., thence to Lot 25, Con. 4, Nassagaweya Tsp., thence to Lot 30, Con. 1, Nassagaweya Tsp., thence to Lot 3, Con. 9, Puslinch Tsp., thence parallel to Toronto Suburban Ry. and Eramosa River to Guelph.

**Guelph-Berlin section.**—From Guelph it is proposed to run north westerly through Bloomingdale and New Germany to Berlin.

**Berlin-Stratford section.**—From Berlin the line runs westerly to Baden and thence parallel to the G.T.R. through Baden and New Hamburg to Stratford.

**Stratford-St. Mary's section.**—In Stratford the line runs westerly over private property and over the city streets to the western limits of the city. Thence it runs parallel to the G.T.R. to St. Mary's, through Downie and Blanchard Townships. It then runs southerly and westerly through the town over private property and streets, crossing the C.P.R. at grade and thence over the Thames River out of the town.

**St. Mary's-London section.**—From the western limits of the Town of St. Mary's the line runs in a south westerly direction through Blanchard and Biddulph Townships parallel to the G.T.R. to Granton. From Granton it runs through Biddulph Tsp. southerly to the northern boundary of London Tsp. From thence it runs south easterly adjacent to road between Lots 8 and 9 from Concessions 16 to 10 inclusive, London Tsp. From this point the line runs southerly through Concessions 9 to 4 inclusive, from lots 9 to 16 inclusive of London Tsp. From this point it follows (back a short distance) from the Thames River through Concessions 3 to 1 inclusive of London Tsp. to a point between the Sarnia Road and the Thames River, a short distance west of the Wharnclyffe Road just outside the north westerly boundary line of the City of London. From this point the line runs south easterly over private property and city streets and over the Thames River in the City of London to Bathurst St., some 260 ft. west of Ridout St., thence easterly along Bathurst St. to the London and Port Stanley Ry., which at present terminates on Bathurst St. just east of Richmond St.

The municipalities which will vote on the projects are the townships of London, Trafalgar, Waterloo, Blanchard, Wilmet, Downie, South Easthorpe, Toronto, Nassagaweya, Guelph, Etobicoke, North Easthope, Biddulph, Esquering, Puslinch, Eramosa, Nelson, Ellice, East Zorra, and West Nissouri, the cities of London, Berlin, Guelph, Stratford, the towns of Waterloo, St. Mary's, New Hamburg and Milton, and the villages of Mimico, New Toronto and Port Credit.

The estimated cost of the various projected lines is \$11,000,000.

**Toronto and York Radial Ry.**—The Ontario Railway and Municipal Board, on Nov. 1, ordered the Toronto and York Radial, on the application of the Toronto-Hamilton Highway Commission, to move its tracks from the centre to the south side of the road, where they pass from the side to the centre, for 1,100 ft., through the village. A further distance of 1,600 ft. is to be dealt with later. (July, pg. 277.)

## Cost of Toronto Civic Car Line Construction.

In answer to an alderman's enquiry, the Toronto Commissioner of Works stated recently that the city had spent \$1,450,883 in the construction of civic car lines, which includes material purchased for the new Lansdowne Ave. line, not yet constructed. This includes an actual expenditure of \$1,350,149, while there are still liabilities outstanding of \$100,734.

Single track line has cost \$60,000 a mile, and double track line \$128,000, for paved construction, including devil strip in the latter case, with 15 ins. of concrete under rail and 18 ins. at intersections, together with overhead structure. The cost per mile of ballasted single track is estimated at \$30,744, and ballasted double track \$54,339, including overhead in each case.

## Electric Railway Finance, Meetings, Etc.

**British Columbia Electric Ry., and allied companies:**

	Sept. 1915	Sept. 1914	July 1 to Sept. 30, 1915	July 1 to Sept. 30, 1914
Gross earnings	\$517,022	\$550,516	\$1,534,871	\$2,015,351
Expenses	477,026	509,626	1,448,479	1,548,804
Net Earnings	39,916	140,890	86,392	466,547

The percentage due to the City of Vancouver for October was \$3,292.85, against \$6,710.98 for Oct., 1914. The number of passengers carried in the periods named were 2,250,450 and 2,856,725 respectively.

**Brantford Municipal Ry.**—A press dispatch says that the Paris-Brantford section had net earnings of \$1,654 for the first six months of the fiscal year and that the Paris-Galt section had a deficit of \$2,674 for the same period.

**Cape Breton Electric Co.**—

	Sept. 1915	Sept. 1914	Sept. 30, 1915	Sept. 30, 1914
Gross earnings	\$3,639.17	\$27,775.00	\$98,184.68	\$91,381.66
Expenses	18,183.93	17,816.77	54,009.61	54,967.03
Net earnings	15,455.24	9,958.23	44,175.07	37,014.63

**Detroit United Ry.**—The ratepayers of Detroit, Mich., on Nov. 2, by a vote of 38,585 to 32,628, decided not to approve of the proposed purchase of the city lines. The plan was formulated by the city's Street Railway Commission, and had been under consideration for over a year. Municipal ownership of public utilities has been urged in Detroit for about 20 years, and has been endorsed by the ratepayers, in connection with the street railway. The recent vote was taken on a specific proposition for acquiring the company's lines in the city, by assuming the entire bonded debt, about \$24,000,000.

**Hamilton St. Ry.**—Earnings for three months ended Sept. 30, \$147,799.91, against \$151,476.35 for the same period 1914. The percentage paid to the city was \$11,824 and \$12,118.11 for the same two periods respectively.

**London St. Ry.**

	Oct. 1915	Oct. 1914	Jan. 1 to Oct. 31, 1915	Jan. 1 to Oct. 31, 1914
Gross earnings	\$4,234.74	\$30,722.19	\$80,333.36	\$81,507.96
Expenses	23,262.19	22,718.63	228,670.37	222,326.56
Net earnings	10,972.55	8,003.56	101,663.09	91,180.87

**Montreal Tramways Co.**—The Montreal Board of Control, on Nov. 5, decided to notify the company that legal proceedings will be taken if it does not comply with the provisions of the franchise bylaw to report receipts for the financial year ended Sept. 1, upon which the city's percentage is based. These returns were not made for 1913-14 until Jan., 1915, and the company still retains \$95,000 of the amount then due. The city could not recover interest on overdue amounts, and claims that it was compelled to borrow money to meet current charges because of the failure of the company to pay up.

### Toronto Ry., Toronto and York Radial and allied companies

	Jan. 1 to Sept. 30, 1914	Jan. 1 to Sept. 30, 1915	Jan. 1 to Sept. 30, 1914	Jan. 1 to Sept. 30, 1915
Operating expenses	\$8,779,921	\$8,779,921	\$8,779,921	\$8,779,921
Depreciation	1,000,000	1,000,000	1,000,000	1,000,000
Interest	1,000,000	1,000,000	1,000,000	1,000,000
Net earnings	449,226	449,226	449,226	449,226

**Toronto Ry.**—The receipts from Jan. 1, 1915, compared with those for 1914, are as follows:

	1915	City percentage	1914	City percentage
Operating expenses	\$8,779,921	70.486	\$8,779,921	70.486
Depreciation	1,000,000	8.744	1,000,000	8.744
Interest	1,000,000	8.744	1,000,000	8.744
Net earnings	449,226	3.930	449,226	3.930

	Jan. 1 to Sept. 30, 1914	Jan. 1 to Sept. 30, 1915
Operating expenses	\$8,779,921	\$8,779,921
Depreciation	1,000,000	1,000,000
Interest	1,000,000	1,000,000
Net earnings	449,226	449,226

**Winnipeg Electric Ry.**—Ten year general mortgage and refunding bonds to the extent of \$1,000,000 with interest at 5% are being offered by the Dominion Securities Corporation. They are due on July 1, 1925, but are liable to call in whole or in part at 103 with interest. These form a part of a closed mortgage issue of \$1,400,000, of which \$400,000 is reserved to retire an underlying 5% issue due in 1933, which are being exchanged. The Winnipeg Electric Ry. Co. guarantees principal and interest of the issue.

### Charges Against Montreal Controllers re Electric Railway Matters.

N. Hebert resigned his position on the Board of Control for Montreal, Nov. 12. The municipal elections came in April, but the city council has the right to fill the position until that date. The ex-controller is involved in considerable litigation arising out of a meeting of the Board of Control held on June 20, when proposals made by him for a new franchise for the Montreal Tramways Co. were approved. An injunction was obtained to prevent the Board acting on the matter, one of the statements made in connection being that Hebert had asked for \$100,000 from certain interests as the price of his support. There are explanations given of Hebert's letters, and allegations and counter allegations are made, which form the basis of several actions. Justice Lafontaine, on Nov. 13, refused to grant any further extension of time in the case of St. Martin and Langlois, two ratepayers, against Hebert, which were set down for hearing Nov. 15. At the opening of the hearing on the latter date the ex-controller "confessed judgment," and Judge Greenshields entered the decision in the petitions of R. Langlois, to the effect "that the defendant is ousted and excluded" from the office of commissioner, while in the petition A. St. Martin, he is declared to have "usurped, occupied and exercised illegally the functions of commissioner." A penalty of \$400 was imposed and the ex-controller was directed to pay the costs.

A new quo warranto action was instituted against Controller McDonald, Nov. 4, in which it was alleged "that further, the respondent himself and by his agent, Renaud, on or about June 18, attempted to extort from the Montreal Tramways Co. a considerable sum of money on his promise to cease his systematic opposition to the adoption of any report on the subject of extending the franchise in favor of the company.

In the action against the Mayor for contempt by taking no notice of the mandamus of June 20, the case was argued in the Court of Appeals, Nov. 15, and judgment reserved.

## Electric Railway Projects, Construction, Betterments, Etc.

**British Columbia Electric Ry.**—The Board of Railway Commissioners has authorized the B.C.E.R. to carry its lines across the Great Northern Ry.'s proposed industrial tracks on Front St., to connect with that line on Front St.; to remove crossover between the G.N.R. and the Canadian Pacific Ry. on Front St.; to rebuild same 125 ft. easterly; and to cross the C.P.R. tracks, all in New Westminster, B.C. (Nov., pg. 441.)

We are officially advised that the company is doing two or three small jobs of laying permanent track in New Westminster.

The company's engineers reported to the Vancouver city council, Nov. 9, that the temporarily repaired Connaught Bridge is not sufficient to carry the electric railway traffic for any great length of time. The City Engineer contends that the bridge is sufficiently strong for all purposes. The City Engineer and the company's engineer were asked to go over the bridge together to check each other's work, and arrive at a decision as to its strength and capacity. (Nov., pg. 441.)

**Lacombe & Blindman Valley Electric Ry.**—The President, J. C. Gibson, Toronto, states that grading has been completed between Lacombe and Rimbey, about 39 miles, "in other words, the entire length of the line except for some slight finishing work that will be necessary," and that practically all the materials required are on the ground except the steel rails, also that part of the rolling stock has been received. No work has been done since the autumn of 1914, when it was closed down on account of financial stringency. The Province of Alberta has guaranteed the company's 5% first mortgage bonds for \$7,000 a mile on 39.1 miles, a total of \$273,700, and a prospectus offering \$250,000 of them was issued by W. L. McKinnon & Co. in November, 1914, but we have no information as to what, if any, portion of this issue was sold. (Mar., pag. 108.)

**Lake Erie and Northern Ry.**—We are officially advised that the electrical equipment of this line has been considerably delayed, owing to the non delivery of the substation and car equipment by the manufacturer. A strong effort is being made to get the equipment installed so as to have the Galt-Brantford section in operation by Dec. 31. (Sept., pg. 356.)

**London and Port Stanley Ry.**—We are officially advised that the car barn under construction in London, Ont., is approximately 150 x 100 ft. It will have three tracks extending the whole length, and a 40 ft. space along one side, which will be used for repair shops and offices. The building will be of structural steel frame with brick and concrete walls, steel sash and concrete roof. The plans were prepared in the Hydro Electric Power Commission of Ontario's office under the direction of F. A. Gaby, Chief Engineer. (Nov., pg. 441.)

**Moncton Tramways, Electricity and Gas Co.**—A deputation from the Sunny Brae Town Council waited on E. B. Reeser, General Manager, at Moncton, N.B., recently asking for an extension of the company's lines via Church St., to the new town of Sunny Brae. Mr. Reeser expressed the company's desire to make the extension, and promised to take the matter up with the council in January. (Oct., pg. 404.)

The extension of the company's line from Longue Pointe to Pointe Aux Trembles was opened for traffic Nov. 15.

**Montreal and Southern Counties Ry.**—We are officially advised that the erection of the car barns at Granby, Que., on the ex-

tension from St. Cesaire, will be gone on with next spring. The sub power station on the extension has been completed. W. B. Powell, Montreal, is General Manager, and G. J. Meyer, St. Lambert, Que., is Electrical Engineer.

The Board of Railway Commissioners, in a recent judgment, finds that the bylaws and agreements with the municipality of St. Lambert cannot be read as obliging the company to construct permanent foundations for its tracks or to do more than complete its lines under the direction of the municipality, using T rails and laying them at the level of the existing roadbed, and laying gravel between the rails and for 2 ft. on either side. The public convenience and safety, however, demand that the highway and the railway levels be the same, and the Commissioners, under their general powers, direct that the railway tracks be made to conform to the new street level. In the contract, however, the cost is to be borne by the municipality. If the municipality desires the railway right of way and the highway to be of similar surface and foundation, it may do the work, the railway contributing such an amount as is represented by the cost of the foundation and surfacing authorized by the contract.

The Dominion Parliament is being asked to extend the time for the construction of the various lines authorized to be built. (Nov., pg. 441.)

**Montreal Tramways Co.**—The Board of Control has asked the company to establish the following new routes: A continuous circuit running from Villaray St. south on St. Denis St. and east on St. Catherine St., to Papineau St. or Delorimier Ave.; and to link Rosemount St. with Place d'Armes by a line on the small section of Frontenac St. now without car tracks. (Nov., pg. 441.)

**Niagara River and Eastern Ry.**—The Public Service Commission for the Second District of the State of New York has, according to a press report, under consideration an application by the N.R. and E. Ry. for permission to build and operate a double track line for passenger and freight service between Lockport and Niagara Falls. The N.R. and E. Ry. proposes to connect with the International Ry. and Buffalo, Lockport and Rochester Ry. at Lockport, and with trunk lines of steam railways in Canada by a new bridge across the river at Lewiston. It is also proposed to handle freight on the B.L. and R. Ry. and have connections with the Erie Rd. and Pennsylvania Rd. at Rochester. Charles Hickey, Lockport, is President.

**Peterborough Radial Ry.**—We are officially advised that the reconstruction and other work on the lines in Peterborough, Ont., comprise the laying of 2,000 ft. of new track on Charlotte St.; and the reconstruction of 1,400 ft. on Park St., and of 2,200 ft. on George St. W. G. Ferguson is Local Manager. (Nov., pg. 441.)

**Pictou County Electric Co.**—We are officially advised that the proposed extension to Parkdale, N.S., will not be gone on with until next spring. L. T. Flaherty, Stellarton, N.S., is Manager. (June, pg. 329.)

**Quebec Ry., Light and Power Co.**—H. G. Matthews, General Manager, is reported to have stated, Nov. 12, that the addition to the power house at Montmorency Falls is expected to be completed about Dec. 15. It will add 15,000 h.p. to the power at present at the company's disposal. (Oct., pg. 404.)

**The Sudbury-Copper Cliff Suburban Electric Ry.** is now operating an hourly service from just east of the C.P.R. crossing in Sudbury to Copper Cliff. As soon as the diamond crossing over the C.P.R. is put in,

which is expected to be early in December, a 15 minute service will be given on the whole length of the line both in Sudbury and out to Copper Cliff. A motor car, which has been borrowed from the Toronto & York Radial Ry., is being used at present, but two motor cars have been bought in New York.

**Toronto, Barrie and Orillia Ry.**—Application is being made to the Barrie, Ont., Town Council for an extension of a year for the laying within the town of the tracks authorized by the franchise. (May, pg. 190.)

### Regina Municipal Railway Operations.

The following figures are for September, compared with those for Sept. 1914,—

	1915.	1914.
Revenue .....	\$13,545.63	\$15,420.43
Operating expenses .....	\$13,257.97	\$15,453.47
Operating surplus .....	\$287.66	.....
Operating deficit .....	.....	\$33.04
Capital charges .....	\$9,137.57	\$7,476.52
Total deficit .....	\$8,849.91	\$7,509.56
Passengers carried .....	282,408	318,238
Expenses per car mile		
without power .....	13.37c.	14.12c.
with power .....	17.64c.	18.59c.
Power per k.w.h. ....	2.07c.	2.00c.
Power per k.w.h. per car		
mile .....	4.26c.	4.46c.
Platform wages per car		
hour .....	74.43c.	79.79c.
Expenses percentage of		
earnings, without capital		
charges .....	97.91%	
Expenses percentage of		
earnings with capital		
charges .....	165.39%	

### London and Port Stanley Railway's Traffic Interchange Arrangements.

We are officially advised that while there are some details in connection with tariffs and divisions with connecting lines not yet completed, working arrangements have been entered into as follows: At Port Stanley, car load freight is interchanged with the Bessemer & Marquette Dock & Navigation Co.'s ferry steamboat plying between Port Stanley and Conneaut, Ohio, in connection with the Bessemer & Lake Erie Ry. Passenger traffic is interchanged at Port Stanley with Cleveland & Buffalo Transit Co. There are arrangements for freight and passenger interchange at St. Thomas, Ont., with the Canadian Pacific, Grand Trunk, Pere Marquette and Wabash railways and with the Michigan Central Rd. on traffic ex Port Stanley. There are freight and passenger interchange arrangements at London with the Grand Trunk, also inter-switching arrangements with all steam railways there, enabling the L.&P.S.R. to accept or deliver freight at industries located on competing lines' tracks.

**Provincial War Tax in Ottawa.**—Judge McTavish gave judgment at Ottawa, Nov. 1, on an appeal by the Ottawa Electric Ry. against being assessed for the Provincial war tax, amounting to about \$800. The judge held that the agreement exempting the company from taxation referred only to such taxes as the municipal authorities control; the war tax is a provincial tax, and not a municipal one, and as such is not covered by the exemption in the agreement. The company did not object to pay the tax on its real property assessment, nor did it object to the amount of the assessment otherwise, but appealed simply on the point of law as to whether it was not exempt under the agreement.

**Thirty Million Passengers** were carried on ferry boats in San Francisco Bay without injury through accident during the year ending June 30, 1915. In the last 25 years, it is stated, only two deaths have resulted from ferry mishaps.

## Mainly About Electric Railway People.

**H. N. Kittson**, one of the members of the Ontario Railway and Municipal Board, has been elected a Fellow of the Royal Colonial Institute.

**F. Morton Morse**, Secretary-Treasurer, Winnipeg Electric Ry., and Mrs. Morse, have gone to England to be near their three sons who are on active service.

**Patrick Dubee**, Secretary-Treasurer, Montreal Tramways Co., has been appointed a member of the American Electric Railway Association's taxation committee to represent Quebec Province.

**W. G. Ross**, formerly Managing Director, Montreal St. Ry., now Chairman, Montreal Harbor Commission, applied for \$50,000 of the Dominion Government war loan issued in November.

**Lt.-Col. E. W. Rathbun**, of Deseronto, Ont., President, Oshawa Ry., who is now on over-

will probably go to the front in the near future.

**Capt. Guy Boyer**, who has been appointed to the command of B Company, 22nd Battalion, Canadian Overseas Expeditionary Forces, vice Major A. V. Roy, killed in action, was at one time Superintendent of Construction, Montreal St. Ry., and on leaving that company's service went into business in Montreal as a general contractor.

**S. Walter Mower**, General Manager, Otsego and Herkimer Rd., Colliers Light, Heat & Power Co., and Hartwick Power Co., of Cooperstown, N.Y., has resigned due to change in ownership of the properties. Prior to his connection with the Otsego & Herkimer Ry. in October, 1912, he was General Manager of the London & Lake Erie Ry. & Transportation Co. at London, Ont. He was born at Grand Haven, Mich., Aug. 13, 1876. In 1890 he moved to Detroit, and in 1900 he became Assistant to General Manager, Detroit United Ry. In 1905 he became Assistant Superintendent, Port Huron Division, Michigan United Ry., and in June, 1906, he was appointed General Manager of the Southwestern Traction Company, which afterwards became the London & Lake Erie Ry. & Transportation Co. From 1903 to 1908 he was Secretary-Treasurer of the American Electric Railway Engineering Association.

**George Lorne Guy**, whose appointment as Engineer, Manitoba Public Utilities Commission, Winnipeg, was announced in our last issue, was born at Portage du Fort, Que., Apr. 14, 1883, and educated at Camden East, Newburgh, and Queen's University, Kingston, Ont. From 1899 to 1902 he was armature, transformer, meter and test operator, Canadian General Electric Co., Peterborough, Ont.; 1902 to 1907, chief electrician construction and operation, Graves, Bigwood and Co., at Byng Inlet, Ont., and during the winter months of these years was attending Queen's University. From 1907 to 1908 he was engaged in contract construction work at Camden East, Yarker and Newburgh, Ont.; 1908 to 1910, Engineer of Rolling Stock, Winnipeg Electric Ry., Winnipeg; 1910 to 1912, Engineer, Winnipeg City Electrical Department; 1912 to 1914, Sales Manager, Electrical Department, Canadian H. W. Johns-Manville Co., Winnipeg; and from Mar. 1, 1914 he has been in private practice as a consulting electrical engineer, which he will continue, in addition to his duties under the Manitoba Public Utilities Commission.

H. W. Cooper,  
Manager, Oshawa Railway and Thousand  
Islands Railway.

seas service, is in command of the 6th Reserve Brigade of Field Artillery, which forms the Canadian artillery depot of the training division of the new Canadian Army Corps.

**Duncan McDonald**, formerly General Manager, Montreal Tramways Co., will have to go up for re-election next spring if he wishes to continue as one of the Montreal city controllers. In a draw to decide which two of the controllers must retire from office, Controllers McDonald and Hebert lost.

**Frank Harris**, for the past four and a half years Publicity Agent, British Columbia Electric Ry., at Vancouver, has resigned. He went to Vancouver from New York in 1904, and served for several years on the Vancouver daily press before entering the B.C.E.R. Co.'s service. After having a rest he will again take up work.

**Major C. W. W. McLean**, who has been decorated with the Distinguished Service Order for skill in commanding his battery during a recent engagement, is son of Col. H. H. McLean, K.C., M.P., President, St. John Ry., who has been in command of the 7th Infantry Brigade at Valcartier, and who

**Toronto Ry. and Overcrowding.**—The appeal by the Toronto Ry. against a conviction for maintaining a public nuisance by overcrowding its cars, was dismissed by the First Division Court of the Appellate Division, at Toronto, Nov. 10, and the conviction confirmed. R. J. Fleming, General Manager, Toronto Ry., is reported to have stated that the conviction could have no real effect on the matter, as the question of the type of cars to be adopted was still before the Ontario Railway and Municipal Board, and until this had been decided, the company could do nothing to remedy overcrowding so far as it existed.

**Railway Lands Patented.**—Letters patent were issued during October in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acres.
Calgary and Edmonton Ry. ....	1,606.00
Canadian Northern Ry. ....	187.79
Edmonton, Dawson and British Columbia Ry. ....	10.34
Grand Trunk Pacific Branch Lines Co. ....	11.26
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co. ....	2,398.00
Total .....	4,513.39

### Edmonton Municipal Railway Results.

Engineering and Commerce Reports, the official organ of the Engineering and Commerce Efficiency Society of America, Inc., had in a recent issue an article, "Municipal System of Edmonton," by S. C. Reab, of Calgary, Alta., which deals with the street railway department as follows:—"On Nov. 8, 1908, Edmonton instituted the street railway trolley system, the largest venture in the municipal ownership programme, and at present the gravest problem. It seems impossible for this utility to be operated without incurring a big deficit each year. Edmonton has the difficulty to contend with of a large area and a relatively small population. The population is about 40,000, scattered over an area of some 27,000 acres. The establishment of a jitney service has affected somewhat the street railway earnings, but as this service was not established until the spring of 1915 its competition need not be taken into account in this review.

The trackage of the Edmonton street railway system consists of 43 miles of double track (figured on a single-track basis) and 11 miles of single track. The utility had 258 employees and paid \$284,159 in salaries during 1914. Its debenture liability as of Dec. 31, 1914, was \$3,004,429. The cost of the system to that date totaled \$3,063,784, the buildings, track, and equipment having cost \$2,887,866, discount on debentures \$115,876, Strathcona franchise \$10,000, and land \$50,042. The sinking fund amounted to \$174,691. The year's expenditures were: Operating, \$535,430; maintenance, \$80,828; other, \$251,958; a total of \$867,670; against which were receipts aggregating \$642,109, leaving a deficit for the year of \$225,561.

"In 1914 the Edmonton street railway had one fatal accident and 10 suits for damages, all of which were successful, the department paying \$11,182 in damages."

**London & Port Stanley Ry. Operating Results.**—The London Railway Commission, which is operating the newly electrified line, claims that it is already a success. It is stated that the gross revenue for three months to Sept. 30 was \$71,000. At first several steam locomotives had to be hired for the freight traffic, and in August the operating expenses were about \$18,000, but in September, with complete electric operation, they were reduced to about \$10,000. The Commission has paid the city of London \$13,885.54 for the three months, which includes interest on the city's money used during that period, together with sinking fund and rental at the rate of \$20,000 a year. It is stated that these results were obtained in spite of the withdrawal of the Grand Trunk Ry.'s coal traffic, and without the Michigan Central trains which were formerly run over the line between St. Thomas and London.

**A Motor-Bus Feeder Service** for the municipal railway line of Portland, Ore., has been inaugurated. The city council has approved a contract for the operation of motor buses between 13th Ave. West and Nickerson St. and Ballard Ave. and Market St. The contractor receives 3c. for each adult carried and 1.5c. for each school pupil. The city will receive 2c. and 1c. respectively. The contractor is required to furnish an indemnity bond and has the right to extend his route to 20th Ave. and West 65th St.

**The City of San Francisco** has completely constructed 20 miles of electric railway. The city has acquired, constructed and equipped 43.6 miles of single track and has under consideration the immediate construction of an additional 5 miles.

### Electric Railway Notes.

The Toronto Ry. gave \$1,000 to the Toronto Citizens Recruiting League on its tag day, Nov. 9.

The Calgary Municipal Railway is, according to a press report, starting to run one-man cars in the downtown section.

Arrangements are being made for the organization of a unit of the 6th Regiment in Vancouver, to be composed entirely of British Columbia Electric Ry. employees.

About 400 out of the nearly 7,000 members of the Street Railway Men's Union in Canada have enlisted for overseas military service. Their dues are being carried by the order during their period of service.

The Toronto Street Railway Men's Union had a membership of 2,000 when war started and 306 of its men have enlisted. All members who enlist are kept in good standing and the union looks after the wives and children.

The Montreal city council passed a resolution, Nov. 11, calling upon the Montreal Tramways Co. to establish a new five minute car service connecting the north and east ends of the city, via St. Denis and St. Catherine St. East.

The British Columbia Electric Ry. is negotiating with Point Grey and other suburban municipalities round Vancouver for a reduction of the number of cars to be run, and for a general rearrangement of schedules, in order to meet decreased traffic.

C. W. Keats, of Toronto, has been awarded \$3,800 as compensation for injuries received by his three year old son, in the International Ry. accident at Queenston, Ont., recently. The company had previously settled a claim, by paying \$750, on account of the death of a daughter of the same party.

The Toronto & York Radial Ry., through its Bulletin, which is distributed in its cars, asked its passengers recently to say whether they were in favor of smoking in the rear vestibules of the radial cars or not. Coupons were supplied for answering on and the result was a vote of two to one in favor of allowing smoking. It was therefore decided to continue to permit smoking in rear vestibules of cars not provided with a smoking compartment.

**Saskatoon Parcels Delivery.**—The Saskatoon, Sask., City Council is considering a proposal for a daily delivery of goods by street car between Saskatoon and Sutherland. It is proposed for a car to leave Saskatoon at 4 p.m.; parcels to be charged at from 5c. to 15c., according to weight; parcels to be delivered on to the car at Second Ave., Saskatoon, any time after 3 p.m., and to be called for at the Sutherland end. The maximum limit of weight to be 50 lbs., and the maximum size to be 3 x 2 x 2 ft., or 6 ft. long by 2 ft. wide. The person in charge of the delivery depot at Sutherland to be paid 30% of the total receipts. All parcels to be conveyed at sender's risk.

**The Toronto Motor Bus Co.** applied to the Toronto City Council, Nov. 1, for permission to operate a system of motor busses on 13 of the principal city streets, covering the greater portion of the city, for five years from Jan. 1, 1916. The vehicles the company proposed to use would be built with a centre aisle and have accommodation for 14 persons each. The company offered to commence business with 25 vehicles within 60 days, and pay \$5,000 a year for the privilege, and in addition 5% of the net earnings. Bain, Bicknell, Macdonell and Gordon, a local legal firm, represented the company.

### Ontario Railway and Municipal Board's Jurisdiction Over Hamilton, Grimsby and Beamsville Electric Railway Confirmed.

The Ontario Railway and Municipal Board on May 10 ordered the Hamilton, Grimsby and Beamsville Electric Ry. to file within 30 days complete plans and specifications for sanitary conveniences on its passenger cars and in its passenger station at Grimsby. At the hearing the company contended that the Board had no jurisdiction over it, but that it was under Dominion jurisdiction. (See Canadian Railway and Marine World, June, pg. 226), and it appealed against the order.

On Nov. 9 the Appellate Division of the Ontario High Court of Judicature, gave a unanimous judgment dismissing the appeal with costs, so that the Board's order is confirmed.

**Lack of Passenger Shelter at Sunnyside, Toronto.**—In commenting on the lack of shelter for passengers while waiting for Toronto and York Radial Ry. cars at Sunnyside, Toronto, D. M. McIntyre, Chairman of the Ontario Railway and Municipal Board, is reported to have said recently: "We ordered a shelter to be built two years ago. The city has taken over the line, but is not operating it, and I understand has not even paid for it. We cannot order the railway company on an expiring title to build a station. Although the city has practically bought the line it will not assume the title. Last year the company offered voluntarily to place a lighted and heated car there for the convenience of the people. This winter there is nothing, and people wait as long as twenty minutes in the cold. It is a shame. I have endeavored to have the city provide a shelter, and have had the matter up over and over again. But the Board of Control refused recently to recommend the necessary expenditure."

**Destruction of Suburban Shelters.**—The British Columbia Electric Ry. has about 40 shelters and platforms on its line along the Fraser Valley to Chilliwack. It is reported that practically all of these are in a "deplorable state," owing to the breakage of windows, the smashing of doors, and the destruction of platforms. This is a condition of affairs that prevails on nearly every suburban line in Canada, and the companies are practically powerless to prevent it. These shelters are erected for the convenience and comfort of travellers, and ought to be protected by the public authorities from the ravages of hoodlums and others.

**Vandalism in British Columbia.**—Vancouver newspapers report that considerable damage has been done to Canadian Northern Pacific Ry. station and other buildings in the Fraser River Valley. Windows have been broken, floors torn up, electric light fixtures removed, and other damage done. The British Columbia Electric Ry. stations in the same district have also suffered similar damage.

**New Siberian Railway.**—Traffic on the Altai Railway, in Central Asia, says a Petrograd despatch to the London Times, has been opened, 14 months earlier than the date contemplated. The railway, a private line 500 miles long, will open up an immense and rich region of Siberia which has been without means of communication.

**The 650 men recruited in Canada** for railway construction work in Russia, 300 of whom were got together in Vancouver, B.C., are reported to have arrived in Archangel, after an uneventful voyage from New York.

# Marine Department

## Opening of Drydock and Ship Repairing Plant at Prince Rupert.

Announcement of the opening of the Grand Trunk Pacific Ry.'s drydock and ship repairing plant at Prince Rupert, B.C., was made in Canadian Railway and Marine World for November. The selection and survey of the site was made in 1910 and the actual work of construction was commenced early in 1912. A full description of the whole plant, with details and plans, was given in Canadian Railway and Marine World for Feb., 1912, but the following general particulars may be of interest now:—

The dock is in three units, with a total lifting capacity of 20,000 tons. All the units are interchangeable, and each is complete in itself, with pumps and air compressors. The two end sections are each of 5,000 tons capacity, and the middle section of 10,000

truss secured to the pile platform in such a way that it is free to rise and fall with the tide, and when being raised or lowered with the ship. The location of these attachments is such that when it is desired to use the dock in separate sections the bow section may be detached and moved around the pier work located along side the platform and secured in the same manner as provided in the original position. To make the other two sections available as separate docks it is only necessary to detach the middle section comprising six pontoons from the pier work and advance it the length of the detached section, when the sliding clamps upon the wings will coincide with those used for the previous section when the dock was operated as a whole. This will allow ample

The boiler and blacksmith shop is 76 x 150 ft., the central part being 33 ft. wide, provided with a 15-ton travelling crane. The machine shop is of similar design.

### Canadian Northern Railway Car Ferry for British Columbia.

The Canadian Northern Pacific Ry. has given a contract to Geo. Davie & Sons, Levis, Que., to build a car ferry steamship to run between Steveston and Patricia Bay, B.C., about 40 miles. Steveston is at the mouth of the Fraser River, on the southwest corner of Lulu Island, due south of Vancouver, and at the terminus of the B.C. Electric Ry.'s Lulu Island line. It is about

Grand Trunk Pacific Railway's Drydock and Ship Repairing Plant at Prince Rupert.

tons capacity. When all three are joined together the dock will be capable of raising a vessel 600 ft. long of 20,000 tons. The dock has an overall length of 604 1-3 ft. on the keel blocks, a clear width of 100 ft. and a width overall of 130 ft. The lifting power is the aggregate of 12 pontoons of timber construction, each 130 ft. long, corresponding to the width of the dock, 44 ft. wide in a direction corresponding to the length of the dock and 15 ft. deep. These pontoons are united by steel side walls or wings 38 ft. high, 15 ft. wide at the bottom and 10 ft. wide at the top, the walls being divided so that the whole structure may be used under ordinary conditions as three separate docks, one of six pontoons with an overall length of 269 ft., and two or three pontoons each, with an overall length of 164 ft. each. The machinery for pumping the dock consists of centrifugal pumps, operated by electric motors, the capacity of the equipment being sufficient to pump the entire lifting power of the dock in two hours.

The structure as a whole is secured to the shore by clamps on the dock with a vertical

space between the centre and stern sections for the overhang without interference of vessels that may be docked in them.

The pumping machinery consists of twenty-four 12 in. centrifugal pumps, one in each end of each pontoon. They operate at approximately 275 r.p.m., being driven by a vertical shaft. All pumps on each side of each section are driven through gearing and horizontal shafting by an electric motor. Thus for the two smaller sections of three pontoons each there are four 100 h.p. motors, and for the larger section of six pontoons there are two 200 h.p. motors. These motors are alternating current, 3 phase, 25 cycle, 550 volt, with wound rotors and slip rings for variable speed control. The armature shaft is extended at both ends and operates the distribution shafts through reduction gearing at approximately 275 r.p.m.

The power house has all the boilers and power plant required for the supply of all the electric current for the drydock and shop equipment, all under one roof, covering an area of 15,392 sq. ft.

15 miles from New Westminster Bridge, from which point the C.N.R. is building a branch line to Steveston, which is about half finished. Patricia Bay is on the east coast of the Saanich Peninsula, of Vancouver Island, and another C.N.R. branch is under construction from there to Victoria, so that with the car ferry in operation the C.N.R. will have through service from Montreal to Victoria for both passenger and freight trains.

Plans for the car ferry have been prepared by A. Angstrom, who has been appointed Naval Architect for the C.N.R., and who will supervise the construction. While definite information is not yet available, it is said that the dimensions will be about as follows: length, 310 ft.; beam, 54 ft.; depth, 21 ft. The vessel will have three car tracks with a total capacity of 20 freight cars, and it is said that it will have double screws at each end and a speed of about 14 knots. It is expected to be ready for service next summer, and will be taken from Levis down the St. Lawrence River and through the Panama Canal.

# The Stranding of the s.s. Lady of Gaspé.

An inquiry was held at Quebec, Oct. 20, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Koenig and L. R. Demers, as nautical assessors, into the causes of the stranding of the Gaspé Steamship Co.'s s.s. Lady of Gaspé near the Quebec Bridge site on Oct. 13.

The master, J. B. Deslauriers, stated that the Lady of Gaspé was an iron built, schooner rigged vessel owned by the Gaspé Steamship Co., with compound engines, capable of a speed of  $9\frac{1}{2}$  miles an hour, drawing 13 ft. forward and  $15\frac{1}{2}$  ft. aft, carrying a crew of 32, including one certificated officer beside himself. She was 1,189 tons gross and 705 tons net, official no. 78554. They left Montreal at 8 p.m. Oct. 12, and about 7.30 a.m. on the following day he saw the fog coming, and the engines were put standby. They were at this time off St. Basil, and proceeded at half speed and slow, the tide then being flood, one hour from high water. When the north end of the Quebec Bridge was sighted about a point on the port quarter the engines were placed at half speed. Shortly after, upon land being perceived, the order of port was twice given, but the ship touched. The engines were stopped, but no attempt was made to go astern. As some time afterwards the engineer reported the ship was making water fast the boats were lowered in readiness for transferring the passengers, but they were not used as a tug was sent by the owners for that purpose. He further stated that the second officer acted as pilot and gave instructions with regard to the navigation of the ship from Montreal to Quebec at least.

The second officer, who holds no certificate, corroborated the master's evidence in so far as weather conditions were concerned, but added that he gave instructions with regard to steering and courses. He did not look at the compass, but steered by objects such as lights, etc. He did not know what error existed in the compass, and stated that the course he was steering when passing the bridge was E. by N. He did not know whether the captain had detailed a man on the lookout, nor whether there was one, but the fog signals were sounded. He averred that the ship lies as she grounded, and he finds that she is now heading E. N.E., but cannot account for this. He intended to anchor and steered in close in order to make the wharves.

The wheelsman said that he relieved the wheel some five or ten minutes prior to the grounding, finding it starboarded, and he received the order to port twice and the ship grounded. He did not know how she was heading at the time, but thinks she altered a point under the port helm.

The lookout man, who was 16 years of age, stated that he had been four months on the Lady of Gaspé, as sailor, wheelsman and lookout; that he was at the wheel from 6 o'clock until ordered to notify one man from the main deck to relieve him. Meantime the ship was being steered by the second mate. He then went on the lookout, but did not see any sight of land through the fog until after the grounding.

The engineer said that after standby was ordered some ten minutes he came on deck, but did not notice the weather conditions. Various orders were given and executed. At the time of the grounding the engines were going about half speed, which would be about seven knots.

The court's finding is as follows:—The evidence again brings to the court's attention the peculiarly unseamanlike navigation system which appears to prevail on certain

types of vessels. We notice that logs are kept, but very little importance seems to be attached to them, as there is not sufficient information contained in them to verify the statements made before the court. Any copy book at hand seems to have answered the purpose as a log book, and to satisfy the owners, who in this case, appear to look on such important documents with a marked degree of indifference. We cannot help expressing our astonishment at the fact that the master, through the system adopted on board this vessel, is subservient to the instructions and directions of a so called pilot,—second officer,—without even a cer-

Pier Derrick at Grand Trunk Pacific Railway's Ship Repairing Plant, Prince Rupert, B.C., Capacity, 50 Tons.

tificate of competency of any kind. The court heard the master say that he spoke to the pilot, or second mate, about anchoring before they reached the Quebec Bridge, but evidently the so called pilot deferred the anchoring to a later period with the result that he came to grief, although he, the pilot, stated that he sailed or steered a course to get near the wharves in order to anchor; but apparently only when he himself thought proper. The said pilot proved to be a man who was not even versed in the elementary navigation duties involved in handling a vessel, and showed lack of knowledge of distances, and in the opinion of this court was not a person to be entrusted with any duties respecting navigation. The master appeared to be an intelligent man, anxious to do well; but unfortunately influenced by the conditions indirectly imposed upon him by the management. Since he was satisfied to submit to a system which he must have known to be of

a pernicious nature, he must accept its responsibilities.

The ship having a number of passengers on board it was the duty of the captain to assert his authority, and order the anchoring of his vessel in the vicinity of St. Basil, when he saw the dense fog approaching him. Having failed to do so, and being aware of the eddies forming around the piers of the Quebec Bridge, which had a tendency to cause bad steering, he should have taken a broader course passing more in the centre of the channel. It is shown that the vessel must have passed 150 ft. at the utmost from the north pier, whilst at that place there is a width of 1,800 ft. between the two piers. The court cannot come to any other conclusion than that the grounding of this vessel was due to lack of prudence and bad navigation on the part of the master, whom it holds solely to blame, and therefore suspends his master's certificate, 7253, for one year from Oct. 20; but recommends that a mate's certificate for passenger steamers and fore and aft rigged sailing vessels in the coasting trade be granted to him from Apr. 1, 1916, until expiration of his suspension. The court has dealt leniently with the master owing to the peculiar conditions existing on board his vessel regarding piloting of same. As the second mate had no certificate we cannot deal with him.

The court wishes to remark that in its point of view, the employment of an officer without a certificate, or even with one, with a verbal understanding that he is to act as pilot and advise the captain, deserves condemnation, as the influence of such arrangements is contrary to all common sense and is fraught with danger owing to its effect on the mind of the master, who, when he has secured an appointment must, even though conscious of the illogical system, submit to it in order to retain his position. We have every sympathy for a master who finds himself tied down to such conditions; but we, nevertheless, in accordance with our duties, hold him alone responsible for any mishaps. If a master takes command and is unacquainted with the river he should insist that a properly qualified pilot be engaged, irrespective of cost to the owners, and we are of opinion that the sooner the owners of small craft plying the river in charge of masters unfamiliar with the conditions existing, are made to realize that the economy practiced in this manner is not conducive to any good, the better it will be for the reputation of our St. Lawrence route. The court is also of the opinion that whenever it has to deal with such a peculiar condition, that the owners should be called upon to defray the costs of investigation, as in this case the owners are indirectly responsible for this mishap.

**Loss of the s.s. Donnacona.**—Reports were received at the end of October that Canada Steamship Lines' s.s. Donnacona had foundered in mid-ocean, the crew having been saved. The Donnacona operated on the Great Lakes for several years and was one of the company's vessels which entered the Atlantic trade at the commencement of this year. She was built at Newcastle, Eng., in 1900 and was screw driven by triple expansion engines. Her dimensions were, length 245 ft., breadth 42 ft. 6 ins., depth 20 ft. 8 ins.; tonnage, 1,906 gross, 1,222 register. She was originally owned by R. O. & A. B. Mackay, Hamilton, Ont., and subsequently by Inland Lines, Ltd., Richelieu and Ontario Navigation Co., and Canada Steamship Lines, Ltd.

## The Canadian Pacific Railway and the Allan Line.

In commenting on the separation of the C.P.R. steamships from the railway proper, and the absorption of the Allan Line, the Marine Engineer and Naval Architect says: "Under any circumstances other than those now prevailing, it would have been a matter of universal comment, even in the daily press, when the announcement was made that the Allan Line was to be, in fact, absorbed by its big ally, the Canadian Pacific Railway Co. As it is the news was published in a small paragraph, and there, as far as public interest goes, the matter seems to have ended. Of course, the eventual amalgamation of the two companies was long foreseen, and indeed, the arrangements between the two one time rivals had become so harmonious that what is now passing is largely a matter of form. It was probably fully intended, when the C.P.R. took measures to organize its steamship services in a separate organization. The advantages of that step were, of course, obvious as helping to smooth the financing of the working of its already great fleet. But the fact that the management had a purely shipping company under its control made things a great deal easier when a big fusion came to be undertaken. Competition was, of course, still keen when the Allan Line placed in its service the two fine and successful turbine liners, the *Virginian* and the *Victorian*, and thereby gave another proof of its adherence to the traditions set up by its founders, and adhered to throughout its long and successful career. For it was this company, if memory serves aright, which was the first—taught a lesson by the swamping and consequent foundering in the Bay of Biscay of the Australian passenger steamer *London*—to fit its liners with spar decks and to carry the tops of the engine room skylights to a higher plane. For many a year after that the Canadian steamships were notable for their clear flush decks, with an occasional deck house. Then came the era of steel, replacing the former iron fabrics, and though for Channel purposes and such like, small steamers had previously been constructed, the Allan Line put the first steel steamship on the Atlantic in its *Buenos Ayrean*, which preceded by some little time the famous *Servia* of the Cunard Co. Similarly the *Virginian* and her sister were the first two vessels fitted with turbine engines to be placed in the Atlantic trade, and it was their success which encouraged the Cunard Co. to build the *Carmania*, their experimental ship, which was soon followed by the *Lusitania*, most successful and most infa-

mously dealt with of all modern vessels, and the *Mauretania*. Then the whole passenger trade adopted the device whose value the Allan Line had proved. To these two sister ships the C.P.R.—still a keen rival—replied with the *Empress of Britain* and the *Empress of Ireland*. Much talk there was on both sides of further additions to the competition. Tenders for the construction of new vessels were even discussed, but nothing came of it and soon there was harmonious working, followed, it was said, by a certain community of financial interest, and now the C.P.R. has actually bought up the older company, though it does not yet appear that the name and entity of the famous line will be lost. . . . The gross tonnage of the Allan Line was about 155,000 tons—excluding the lost *Hesperian*—whilst that of the C.P.R. is about 239,000 tons, the united concerns thus controlling somewhere approaching 400,000 tons of first class steamships, many of which are modern passenger vessels."

**Requisition of Vessel Tonnage for War Purposes.**—An official statement was issued by the British Board of Trade, Nov. 2, denying the rumors that the Government contemplated requisitioning the entire British mercantile marine, but stating that it had been decided to take powers to deal, by requisitioning a sufficient number of vessels, with cases where an emergency of national importance exists at any time, in any particular market, owing to the absence of any tonnage, and further to regulate the employment of British shipping in the carriage of cargo between foreign ports by means of licenses.

**Harbor Work at Port Nelson.**—On the return of the s.s. *Bellaventure* from Hudson Bay, Nov. 2, it was reported that the construction of terminal facilities and other harbor work at Port Nelson was proceeding satisfactorily. Work was well under way with the building of the pier for loading grain, and three dredges were at work in the harbor. Two of these dredges were built on the spot, and the third, the *Port Nelson*, was built at Toronto, and was stated to be doing excellent work.

**Canadian Vessel Sales During the War.**—The Department of Trade and Commerce announces that the war has had a notable effect on the Canadian merchant marine in respect of the sale of vessels to other countries. Figures quoted show that vessels with a total tonnage of 17,044 and valued at \$1,150,950 have been sold, which is greater than the total for any other year. During the last completed fiscal year, Canadian tonnage increased by 45,721 tons.

## New York State Barge Canal.

The work of constructing the barge canal connecting Lake Erie and New York, utilizing and improving the Erie, Champlain and Oswego Canals, is reported to be about 90% completed, and the Barge Canal Bulletin states that although it is so nearly finished, the uncompleted portions are so located that the usefulness of the enlarged waterway cannot be realized without their completion. On the stretch between the Hudson River and Lake Ontario one uncompleted contract forms the chief obstacle to the opening of navigation along the new route, and there is a similar obstacle on the Champlain Canal.

In 1903, \$101,000,000 was appropriated by New York State for the improvement of the Erie, Champlain and Oswego Canals, and during 1915, \$3,654,000 was appropriated for the completion of contracts let prior to Jan. 1, and for which no funds were available. The Legislature also passed an act submitting to the people for decision the question of issuing further bonds of \$27,000,000 for the completion of all work contemplated, and for the settlement of claims adjudged by the courts, and in the event of the further bonds being issued, the \$3,654,000 to be refunded to the State Treasury. Voting on the referendum took place at the state elections on Nov. 2, and while definite figures are not available at the time of writing (Nov. 17), we are officially advised that the proposal to issue \$27,000,000 of bonds was carried by approximately 45,000 majority.

The actual cost of construction has considerably exceeded the original estimates, which is partly explained by delays and contract cancellations due to court decisions and by expenditures for repairing breaks and maintaining navigation in the old canal. It is pointed out that in the original estimate the chief discrepancy was regarding the amount allowed for property damages, there being no precedent at that time to indicate that the courts would award such high land damages and power development claims as they have since done.

It is estimated that, if the work be taken in hand early in January, the Champlain Canal can be completed in a year, as can also the canal between Waterford and Oswego and the branch into Cayuga and Seneca Lakes. The balance of the canal through to Buffalo would require another year to finish. Some companies, it is announced, are already organized and prepared to put vessels into service on the canal, chiefly for local traffic, immediately it is completed.

x A recovered wreck.

## The Interstate Commerce Commission's Interference With Lake Traffic.

The Northwestern Miller, of Minneapolis, Minn., the leading milling publication in the United States, says in a recent issue:—

The Lehigh Valley Rd. has petitioned the Interstate Commerce Commission for a rehearing on its application to be allowed to continue its lake service, which, in common with that of other railways operating lines on the lakes, was ordered stopped because the commission held that such service violated the terms of the Panama Canal Act. This act, commonly supposed to apply specifically to lines operating through the Panama Canal, was given general application by the simple inclusion of two words, 'and elsewhere,' thus bringing under its provisions the Great Lakes, according to the ruling of the Interstate Commerce Commission, a result no doubt never contemplated by the majority of those who voted for the measure in Congress, believing it to be intended only for regulating traffic through the canal.

Taking advantage of this opportunity, the Interstate Commerce Commission promulgated a ruling which is one of the most preposterously destructive acts ever perpetrated by this body, totally disrupting, and destroying an established system of lake transportation, which has been of incalculable benefit to the western shipper and receiver, in the hope of encouraging an imaginary system of so-called 'independent' transportation, which, by a disjointed and disconnected service, is to accomplish what the commission considers 'competition,' but which actually would be a state of irresponsible chaos. Thereby it is the desire of the commission to turn backward the wheels of progress and revert to a system of transportation which was out of date a quarter of a century ago.

"In its interpretation of the meaning of the act, the commission is doubtless sincere, believing that in some mysterious way an independent system will come into being which shall give shippers the benefit of a competition which they do not at present have, and cannot under existing conditions obtain. The commission has been led into this belief by the persistent outcry of the paid agitators employed by certain associations and trade organizations. For some time actual shippers have been aware that, on the whole, the work of these agitators has been mischievous and even dangerous, but they are powerless to restrain them; the machinery for their employment having been put in operation, no way is provided either for detecting them wisely or suppressing them altogether. At first, no doubt, these hired 'experts' accomplished some good, and fully earned half their salaries. There were real grievances and discriminations, and these were rectified. But, by the same token, as each town had its own 'expert,' each plugging and pulling for his own community, their efforts practically offset each other; no city secured a permanent advantage in rates over the other, and the gain of one was nullified by the gain of the other.

"When all the obvious and real inequalities were settled, the 'expert' found himself in a perilous position. It was still incumbent upon him to 'make good' or lose his place. He then developed into the local oracle on freights, the man who had a grievance, the walking delegate who was the retained and paid foe of the carrier, the confirmed trouble breeder whose glib tongue was always heard telling about the iniquities of the existing transportation system; the advocate of the new, the untried, the irre-

sponsible and the theoretical; the first to appear before committees and commissions, urging the interests of those he represented, an agitator paid to be a thorn in the flesh, under the theory that nothing is gained except by constant complaint and eternal protest.

"The civic organizations that support and keep in motion these 'experts' rarely represent the real shippers either by their membership or their published sentiments. Mostly they are composed of real estate operators, local bankers, retailers, and a vast conglomeration of clerks, salesmen and subordinates, who like to imagine themselves representative citizens. Shippers who have a large and comprehensive view of traffic matters have long since withdrawn their support. They now wish they had never mistakenly set in motion the mischievous machinery they no longer control.

"Such influences as these, which really signify nothing but a distorted sense of local patriotism, are responsible for the hue and cry raised against the railway controlled lake lines which are now threatened with extinction. To these the Interstate Commerce Commission has evidently listened, not wisely but too well. If its ruling is not reversed, the western shipper and receiver, now so dependent upon lake transportation, will find themselves facing a situation nothing short of calamitous in the very near future. For this they may thank the walking delegates of their local trade unions, whether or not they themselves are members in good standing."

**Alleged Shortage of Tonnage for Canadian Meat.**—In response to questions in the British House of Commons, Nov. 11, regarding a statement that Canadian meats could not be shipped owing to a shortage of refrigerator vessels in the Canadian trade, the President of the Board of Trade stated that several cargoes of meat had been purchased in Canada, and he was in communication with the Government regarding further purchases, and that only insulated spaces on British vessels usually trading to Australia, New Zealand and the River Plate had been requisitioned.

## The Loss of the s.s. Capilano.

Judgment in the enquiry into the causes of the foundering of the Union Steamship Co.'s s.s. Capilano off Texada Island, Oct. 1, was delivered at Victoria, B.C., Nov. 4, by Cap. J. D. Macpherson, acting Wreck Commissioner, as follows:—"The court, having carefully studied the evidence adduced, is unanimous in its decision that the loss by foundering of the s.s. Capilano in the early hours of Oct. 1, was directly due to her having struck some submerged obstruction about 9.25 on the night previous. The evidence, which, with a few exceptions, was singularly straightforward, clearly points to the fact that in striking the submerged obstruction she received serious but hidden damage, which, though unseen and undiscovered, was, nevertheless, strongly suspected by the master and most of the crew. The rather unusual examinations held and precautions taken after the impact, and continued throughout the night until almost the time the ship was abandoned, go to prove the last statement. The opinion of most of the witnesses examined was that the vessel had struck a submerged log or logs. Whatever she struck can never be proved, owing to the total loss of the ship in comparatively deep water and the impossibility of being able to examine the nature of the damage sustained. Taking into consideration, however, that the night was very dark and the atmosphere thick with smoke, and the probability that owing to these conditions the vessel, when rounding Scotch Fir Point, was farther off than was estimated, thus bringing her nearer to the Texada Island shore on her next course, and the very significant fact that the master, who had been lying down in his cabin since about 8 p.m., when awakened by the sound of the whistle being blown, went into the wheel house and immediately said, 'We are too close in. Haul her to the westward. Port,' and it was while executing this manoeuvre and under port helm that the vessel struck, the court is of the opinion that the Capilano was too close to the Texada Island shore, and that the submerged obstruction that she struck was not a log or logs, but a rock.

"Owing to there being an element of doubt, however slight, as to what the submerged obstruction was, the court is of the opinion that the master, Samuel Nelson, is entitled to the benefit of the doubt, and as he has hitherto held a blameless record and

has been highly spoken of by the Managing Director of the company to which the Capilano belonged, the court will not, in this instance, deal with his certificate, and returns same to him. It nevertheless severely censures him for retiring to his cabin under the conditions of weather then prevailing, and leaving an uncertified man, however experienced, in charge of the ship. This is not only a very reprehensible practice, but is distinctly contrary to the rules and regulations of the company to which the ship belonged. In the opinion of the court 8 p.m. is not a fit and proper time for a master of a steamer to retire when the weather is

thick and the next port of call is only 11 miles distant. The court, therefore, in severely censuring him also warns him as to his procedure in these waters in the future. The court blames Fletcher Hemmonds, second officer, for not calling the master under the existing circumstances, more especially as the vessel was then getting close to her next port of call, Van Anda. As he does not possess a certificate the court cannot deal with him in any other manner but to warn him that if ever he does possess one he will be held responsible, under like conditions, when he fails at once to advise the master when in any doubt."

### Shipping Letters From the Head of the Great Lakes.

F. & W. Jones, Shipping Brokers, Fort William, Ont., have written as follows:—

**Nov. 6.**—Eight cargoes of coal were unloaded during the week, all bituminous. One boat is now under the rigs and 12 are en route. This line-up will keep the docks busy for the best part of the week. Dispatch in unloading is good, and boats are having no hold up and docks work nights when requested. Car shipments to the west are still very good and there is every prospect that they will keep normal for the balance of the season.

Grain shipments from the Canadian head of the Lakes during the first week in November show an increase of 1,000,000 bush. over the last week of October, total shipments being 12,952,550 bush. The number of cargoes this week was seventy, 31 going to Buffalo and Lake Erie side ports and 39 to Canadian ports. Receipts have dropped off slightly this week, being 15,627,922 bush. against 16,374,885 last week. Stocks have accumulated slightly and dispatch in loading is consequently better.

Conditions in the harvest fields are very favorable and threshing is well in hand. The car situation is somewhat relieved, although the effect has been felt rather severely during the past week, and a big increase in receipts from now on is looked for.

**Nov. 13.**—Coal arrivals fell off this week, five cargoes being unloaded. This was entirely owing to the severe weather that has prevailed on the lakes the last few days. Ten steamships are en route, five of which are over due. This will mean a slight congestion, but as five of the vessels are less than 3,000 tons it will not be serious. Half of the 100,000 tons mentioned in our letter of Oct. 30 may be reckoned to have come forward, but other docks are still looking for fairly big receipts so that at the moment the outlook is for receipts to continue at about the present rate until the close of navigation. Car shipments to the west are still about the same as at last writing, and cannot be considered as above normal.

Grain shipments during the week show an increase of approximately 500,000 bush. over last week, being 13,391,191 bush. of all kinds of grain. The number of cargoes was forty-nine, 30 being consigned to Buffalo and Lake Erie side ports and 19 to Canadian ports. Receipts from the west continue about the same, being 15,720,196 bush. of all grains. Stocks show an increase over last week, being 23,226,303 bush. of all grains. Dispatch in loading has been good, and in but few cases have vessels had to call at more than two elevators. It is expected that before the close of lake navigation the Canadian Government railways will announce an all rail grain rate from Fort William and Winnipeg to St. John, which will be such as to permit the export of many millions of bushels of the western crop during the winter. The Government will utilize the Na-

tional Transcontinental and Intercolonial Railways for the winter grain route, and there is no doubt that the C.P.R. and C.N.R. will meet the Government rate.

Grain continues to go down the lakes in record breaking quantities, and if the present European demand continues it is anticipated that about 110,000,000 bush. will have been shipped from Fort William and Port Arthur by the close of lake navigation. The estimated exportable surplus of the western crop is 250,000,000 bush., the storage capacity at the head of the lakes is about 45,000,000 bush., leaving for storage in interior elevators, or to be shipped out during the winter months, about 95,000,000 bush. The world's weekly requirements are about 9,000,000 bush., and from North America alone for the past five weeks about 11,000,000 bush. per week have been going to Europe. There must, therefore, be an accumulation of wheat stocks there, and this with the Argentine and Australian export period nearly at hand may in a considerable measure check the Canadian grain movement. Stocks in store at date, receipts and shipments during the week, are as follows:

	Stocks.	Receipts.	Shipments.
Wheat . . . . .	18,231,048	12,367,940	11,007,651
Oats . . . . .	4,013,561	2,947,807	2,117,064
Barley . . . . .	531,577	290,071	132,458
Flax . . . . .	450,117	114,384	134,007

**Nov. 20.**—Coal arrivals during the past week show an increase over last week, 12 cargoes having been unloaded, all bituminous. Three cargoes are reported en route. Dispatch in unloading has been good; during the first few days of the week there were vessels waiting turn at three of the docks. This was owing to vessels having been held below during the storm of the week previous, but the docks worked continuously on boats until they were unloaded, and no serious congestion resulted. Car shipments to the west remain about the same, being barely a normal movement.

Grain movement here continued fairly active during the past week, showing a slight increase in lake shipments over the previous week, the total loaded into vessels being 13,858,708 bush. This was carried in 56 vessels; 31 going to United States ports and 25 to Canadian. Receipts from the western provinces are good, but have not reached the amount received in last week's statement; this, consequently, together with improved shipments, makes a slight decrease in total stocks on hand, which now stands at 22,923,185 bush. of all grains, or approximately half of the elevator total capacity of the two ports. Dispatch in loading has been good, many cargoes being collected at only one elevator. At time of writing there are some 15 vessels overdue for grain cargoes, and were it not for the adverse weather on the lakes, no doubt a larger total shipment would have been made during the week. Threshing in the west has made good progress of late. It is estimated that Manitoba has finished, but two other

provinces still have a large amount to thresh. Farmers in those provinces have, in many cases, stacked their grain, thus enabling them to hold it safely indefinitely. It is estimated that there will be a continual movement of grain from the west to the head of the lakes well into next spring, partly on account of delayed threshing and partly on account of delay in railway transportation. The opening of navigation for 1916 should therefore find elevators at the head of the lakes well stocked, and the opening should bring active demand for lake space. It is computed that less than 40% of the estimated exportable surplus of all grains will have been moved east at the close of navigation. Stocks in store at date, receipts and shipments during the week:—

	Stocks.	Receipts.	Shipments.
Wheat . . . . .	17,932,173	10,337,717	10,636,593
Oats . . . . .	3,903,262	2,746,875	2,857,175
Barley . . . . .	557,764	308,425	282,237
Flax . . . . .	529,985	162,571	82,703

The Panama Canal Commission announces that due to continued earth movements, the condition of the channel at the bases of the east and west Culebra slides was essentially the same at Oct. 12, as it was a week previous, the material removed during that period being about equal to the movement into the prism. It is deemed inadvisable therefore at this time to predict any approximate date for the reopening of the canal, and shipping interests are being advised to use some other route until further notice, which will be given as soon as material is removed sufficiently to insure more stable conditions. For the seven days prior to Oct. 12, 208,732 cubic yards of soil was removed from the prism, the work being continued at high pressure.

**Dominion Wreck Commissioner's Judgment Questioned.**—A question was asked in the British House of Commons, Oct. 27, regarding the Dominion Wreck Commissioner's judgment on the Batiscan-Bengore Head collision, which suspended the certificate of the master of the s.s. Batiscan for two years and granted a chief mate's certificate for the latter 12 months of that period. In the question, stress was laid on the fact that there was no loss of life following the collision. The Secretary of the Board of Trade replied that the matter was receiving careful attention.

**Toronto Harbor Improvement Works.**—In an interview at Toronto, Nov. 3, the Minister of Public Works stated that he had had a conference with the Canadian Stewart Co., the general contractors for the works for the improvement of the Toronto harbor, and all the matters in dispute in connection with the quality of certain work carried out under subcontracts had been cleared up, and no further difficulty need be expected.

**The Iperia Shipping Corporation Ltd.** has been incorporated under the Dominion Companies Act, with \$1,000 capital and office at Montreal, to carry on a general steamship owning and managing business, and to engage in the carrying of passengers and cargo on the high seas and inland waters. The incorporators are: R. M. Page, New York; L. Macfarlane, W. B. Scott, A. Knatchbull-Hugesson and J. G. Cartwright, Montreal.

**Prince Edward Island Car Ferry Operation.**—The Charlottetown, P.E.I., Board of Trade has been advised by F. P. Gutelius, General Manager, Canadian Government Railways, that the car ferry steamship Prince Edward Island will be placed in service between the mainland and the Island during the winter. During the first part of the season it will operate between Pictou and Charlottetown, and later between Pictou and Georgetown.

### Atlantic and Pacific Ocean Marine.

The navigation of the St. Lawrence River to Montreal, which usually closes about Nov. 20, is, it is stated, to be continued until ice renders conditions dangerous.

A press dispatch from London, England, states that the British Government has released three captured German sailing vessels, the *Terpsichore*, *Chili* and *Carl*, for carrying grain from Canada to Europe.

The Norwegian Government is reported to have ordered two bulk freight steamships to be built in Cleveland, Ohio, and it is stated that the number will probably be increased to six.

The British s.s. *Rio Lages*, which was reported to be on fire, about 280 miles from Halifax, N.S., early in November, when bound from New York to Queenstown, Ireland, with sugar, arrived at Halifax, Nov. 5.

The British s.s. *Oakfield* was reported via Cape Race by wireless, Nov. 22, to be disabled in mid-ocean, through the loss of her propeller blades during a heavy storm. The s.s. *San Giorgio*, of New York, was standing by.

The s.s. *Baerenfels*, which arrived at Montreal, Nov. 11, was formerly owned in Germany, and was captured by a British war ship off Alexandria, Egypt, in Sept., 1914, and became British property by judgment of a prize court.

The Pacific Mail Steamship Co.'s s.s. *Persia*, formerly *Coptic*, is reported to have been sold to the *Toyo Kissen Kaisha*, of Japan, for \$450,000. She was built at Belfast, Ireland, in 1881, and is 4,356 gross tons and 2,744 register.

It is reported that six steamships have been dispatched from Nova Scotia, loaded with cars built for Russia, by the Eastern Car Co. They are on their way to Vladivostok, the vessels being divided between two routes, via Cape Horn and via the Suez Canal.

Two steamships, the *Hamborn* and *Hocking*, sailing under the United States flag, were seized and taken to Halifax, N.S., recently, and it is reported that they are to be dealt with in the prize court there. They were formerly under German ownership, and it is contended that the transfer is not legal.

Furness Withy and Co. have inaugurated an additional trans-Atlantic service between Philadelphia and Glasgow with the steamships *Lowther Range*, *Hambleton Range* and *Annapolis*. It is expected that an additional vessel will be employed and a fortnightly service maintained.

A press report states that Furness, Withy and Co. have purchased the steamships *Den of Crombie*, *Den of Glamis*, *Den of Kelly* and *Den of Ruthven*, from the *Barrie Shipping Co.*, Dundee, Scotland, and that they will be renamed and placed in service between England and American ports.

The C.P.R. has purchased the s.s. *Franktor* from the *Palace Shipping Co.*, Liverpool, England, and has changed its name to *Mattawa*. She is a sister vessel to the C.P.R. s.s. *Medora*, which was formerly the s.s. *Frankmount*, purchased from the *Palace Shipping Co.* earlier in the year.

The *Cunard Co.*'s s.s. *Ste. Cecilia*, which grounded in the St. Lawrence River at *Maisonneuve*, Nov. 13, was released, Nov. 15, and taken back to her dock, without damage. She was lightered of about 500 tons of cargo, which was afterwards restowed.

The *Osaka Shosen Kaisha* s.s. *Manila Maru* arrived at Victoria, B.C., Nov. 12, on her maiden voyage from Japan to British Columbia and Puget Sound ports. An average speed of nearly 14 knots an hour was

maintained, and the journey from Yokohama to Victoria occupied a little over 13 days.

The s.s. *Turret Chief*, formerly owned by the Canadian Lake and Ocean Navigation Co., and wrecked in the Great Lakes disaster of Nov. 1913, and which was eventually salvaged, repaired and sold to A. B. Mackay, Hamilton, Ont., is reported to have been sold to British interests. She has been utilized for some time in carrying war supplies to Europe.

The C.P.R. winter schedule of passenger steamship sailings comes into operation Dec. 3, with the sailing of the s.s. *Misanabie* from Liverpool and its arrival at St. John, N.B., Dec. 13. This vessel and the s.s. *Metagama* alternately, will make eight round trips, concluding Apr. 15, 1916, and neither of the vessels will call at Halifax, either eastbound or westbound.

The Norwegian owned s.s. *Wacousta*, under charter to the *Nova Scotia Steel and Coal Co.*, and which was carrying a consignment of box cars built by the *Eastern Car Co.*, from Pictou, N.S., to Vladivostok, Russia, was reported, Nov. 14, to have been sunk by an enemy submarine, off the west coast of Crete, in the Mediterranean Sea. The crew are reported to have been saved.

In addition to the s.s. *Empress of Japan*, the release of which was announced in our last issue, the British Admiralty has released the C.P.R. steamships *Empress of Asia* and *Empress of Russia*, all of which have been in use as auxiliary cruisers since the commencement of the war. They are being refitted at Hong Kong, and will be replaced in service between Vancouver and the Orient shortly.

The s.s. *Hendon Hall*, owned by *Furness Withy and Co.*, which was wrecked at *Pointe des Montes* in the spring and abandoned to the underwriters, but which was eventually salvaged and taken to St. Joseph de Levis, where she has been repaired, at a reported cost of \$95,000, is stated to have been sold to the *West Hartlepool Navigation Co.*, West Hartlepool, Eng.

The *Pacific and Eastern Shipping Co.* is reported to have been incorporated in New York State, with \$2,000,000 authorised capital, with the chief object of purchasing a contract executed in Pekin, China, between the Chinese Government and F. Hartens and Sons, Cumberland, Md., and a citizen of Pekin. It is stated that Chinese are the chief shareholders, among them being the Chinese Ambassador at Washington, D.C., who is about to retire.

The *France and Canada Steamship Co.*, the incorporation of which has been previously mentioned, has inaugurated a steamship service between Canada and France, with the steamships *Carpattia* and *Utonia*, formerly of the *Cunard Line*. It is stated that the chief feature of this service will be the transport of horses for war purposes, from a U.S. port after the St. Lawrence is closed for the winter, and that 10 vessels will be engaged.

It was reported in Sydney, N.S., Nov. 16, that the s.s. *Dunelm*, owned by *Canada Steamship Lines, Ltd.*, and under charter to the *Dominion Iron and Steel Co.*, had met with some disaster at sea. She sailed from Sydney on Oct. 16, with a full cargo of steel for Manchester, England, and up to the date mentioned had not been heard from. She carried a crew of 25. She was built at Sunderland, England, in 1907, of steel, equipped with triple expansion engines, 19½, 33 and 54 ins. by 36 ins. stroke, supplied with steam by two Scotch boilers 12½ by 11½ ft. with forced draught. Her dimensions are: length, 250 ft.; breadth, 43 ft.; depth, 26½ ft.; tonnage, 2,318 gross, 1,480

register. She was originally owned by R. O. and A. B. Mackay, Ltd., Hamilton, which was absorbed by *Inland Lines, Ltd.*, and later by the *Richelieu and Ontario Navigation Co.*, which was afterwards merged in *Canada Steamship Lines, Ltd.*

### Maritime Provinces and Newfoundland.

The St. John, N.B., harbor revenue for October was \$4,519.22 against \$4,447.19 for Oct., 1914.

Rhodes, Curry and Co., Amherst, N.S., have received instructions to proceed with the construction of a new shed 80 by 350 ft. on No. 15 pier at St. John, N.B.

The Newfoundland sealing vessel *Iceland*, under construction at Greenock, Scotland, is reported to have been taken over by the British Government for naval purposes.

The Canadian Whaling Co.'s s.s. *Grib*, which ran ashore on *Anticosti Island* in October, and which was abandoned to the underwriters after several attempts to float her failed, was sold by tender, Nov. 10.

The *Dominion Coal Co.*'s shipments up the St. Lawrence this year are stated to be about 1,500,000 tons, 400,000 less than last year, which was a record. The company's output for November was 33 1-3% over Nov., 1914.

The *Eastern Steamship Corporation's* s.s. *Governor Cobb* sailed from St. John, N.B., Nov. 15, on her last trip to Boston, Mass., for the season. She will be overhauled at Boston, and be placed in service between Key West and Havana for the winter.

Mention was made in our last issue of certain whaling vessels owned in Newfoundland, which it was stated the Russian Government was considering purchasing for ice service in the White Sea. It is now stated in New York that the s.s. *Beothic* has been acquired, the price paid being given as \$290,000. The steamships *Adventure*, *Bellaventure* and *Bonaventure* were inspected and tested during November by Russian Government agents.

The steamships *Easington* and *Kron Prins Olav*, under charter to the *Dominion Coal Co.*, are definitely considered to have been lost while en route with coal from North Sydney, N.S., to St. John and Montreal respectively. They sailed from North Sydney about Sept. 25, and ran into a storm. Nothing has been heard of them since. The *Easington* was built in 1907, and was 1,387 tons, insured for £20,000. The *Kron Prins Olav* was also built in 1907, was 3,923 tons and insured for £48,800.

### Province of Quebec Marine.

J. A. Samson, Bienville, Que., has been appointed Inspector of boilers and machinery of steamboats, vice J. H. Fontaine, resigned.

The Marine Department has replaced the old wooden range lights, which have been in service for nearly 44 years, along the *Richelieu River* at *Lacolle*, by modern steel structures.

The *Montreal Harbor Commissioners* have added another steam tug to those already in service, making a total of 11. The latest was launched at Montreal, Nov. 11, and named *David Seath*.

The Marine Department gave notice, Nov. 11, that about Nov. 20 the lighthouse building on *Pointe Claire pier*, Lake St. Louis, in the River St. Lawrence, would be removed and replaced by a concrete block surmounted by a gas lantern elevated 10 ft. above the top of the pier.

The *Montreal Drydock and Ship Repairing Co.* has completed the renovating and en-

larging of the Tate drydock at the foot of Mill St., Montreal, abutting on the Lachine canal, and it is stated that the largest grain carriers can now be accommodated there. The dock is operated under lease from the Dominion Government.

Traffic returns for the navigation season for the Lachine Canal show that 35,685,288 bush. of grain passed through to the end of October, compared with 61,811,340 for the same period in 1914. In October 6,432,245 bush. were dealt with against 10,574,568 in Oct. 1914, rather more than half of the decrease being in wheat. The tonnage operated through the canal in October was 573,729 against 704,841 in Oct. 1914, the cargo tonnage being 487,905 and 602,964 for the same periods respectively. The number of vessel passages in October was 1,123, or 41 less than in Oct. 1914.

The Gaspé Steamship Co.'s s.s. *Lady of Gaspé*, which ran ashore near the Quebec Bridge site, while en route from Montreal to Quebec and Gaspé ports, Oct. 13, was floated by compressed air, Oct. 23, and taken to Pointe a Carcy wharf, Quebec, where she sank on the following day, owing to the failure of one of her pumps. She has since been abandoned, and J. Bouchard, Manager of the company, is reported to have stated that she was valued at \$50,000 and was uninsured. She was built at Glasgow, Scotland, in 1877, and was first named *Restigouche*, and later *Rathlin*. Her dimensions were, length 229.7 ft., breadth 31 ft., depth 16.1 ft.; tonnage, 1,189 gross, 705 register, and she was equipped with engine of 180 n.h.p., driving a screw. The Quebec Harbor Commission has refloated the vessel.

### Ontario and the Great Lakes.

The concrete breakwater, recently completed, at the entrance of the Mission River at Fort William, was considerably damaged during a heavy storm, Nov. 10.

The Lake Carriers' Association has recommended a draught of 19½ ft. through the Davis lock at St. Marys Falls in St. Marys River, for vessels bound to Lake St. Clair and Lake Erie ports.

The bell buoy usually stationed at the mouth of the Niagara River in Lake Ontario, and which broke from its moorings at the end of October, is not to be replaced until the reopening of navigation in 1916.

The Great Lakes Steamship Co. is having a vessel built at Toledo, Ohio., at a cost of about \$450,000. It will be 600 ft. long over all, 580 ft. between perpendiculars, 60 ft. beam and 32 ft. deep, and about 12,000 tons gross.

The Marine Department announces the completion of the dredging of the entrance to the Kaministiquia River, in Thunder Bay, to a depth of 25 ft. and a width of 600 ft. The channel has been swept and the buoys rearranged.

The Marine Department announces that only the south half of the dredged channel at the entrance to the Kaministiquia River, Fort William, carries a depth of 25 ft. The north half, or older part of the channel, has a safe depth of 21 ft.

Canada Steamship Lines s.s. *Martian*, while proceeding to the Empire elevator at Port Arthur, Nov. 5, with a partial cargo, collided with the dock and damaged six plates. It was not found necessary to drydock her, part of her cargo being lightered, and the repairs made.

The Marine Department has completed the alterations to the back range lighthouse at Owen Sound. The lighthouse is a square steel skeleton tower with sloping sides, surmounted by two lanterns showing a fixed

white light at an elevation of 92 ft., visible for 15 miles in the line of the range.

The strong winds in the early part of November caused considerable damage in the neighborhood of the Sault Ste. Marie canals. The cofferdam at the head of the Worth lock was torn away, and the swing bridge was put out of business. Traffic was not interfered with on this account, as very little shipping was moving.

A charge in the Toronto Police Court, against Canada Steamship Lines, Ltd., for permitting smoke to be emitted from the funnels of vessels while lying at the Toronto wharves, was dismissed, Nov. 8, it being held that steamships, being under Dominion control, were not amenable to the provisions of civic bylaws.

The United States Lake Survey reports the levels of the Great Lakes in feet above tide water for October, as follows,—Superior, 602.75; Michigan and Huron, 579.81; Erie, 571.99; Ontario, 245.17. As compared with average October levels for the past ten years, Superior was 0.09 ft. above; Michigan and Huron, 0.75 ft. below; Erie, 0.14 ft. below, and Ontario, 0.70 ft. below.

The Rutland Transit Co., which formerly operated steamships on the Great Lakes and to Ogdensburg, N.Y., has sold the last of its vessels, the *Rutland* and *Ogdensburg*, to the Pacific Alaska Navigation Co., Seattle, Wash. The company was owned by the Rutland Rd., which was ordered by the Interstate Commerce Commission to sever its connection with its steamship line, the same not being in the public interest.

The Canadian Stewart Co.'s steam tug A. M. Stewart was launched at Leith, Scotland, recently, and it is reported that two other similar tugs are being built there for the same firm. The dimensions of the A.M. Stewart are, length overall 110 ft., length between perpendiculars 104 ft., breadth 26 ft., depth moulded 14 ft. She is equipped with engine of 900 h.p., and has steam windlass, steam capstan, salvage crane, and complete electric light plant with powerful searchlight.

The s.s. W. D. Rees, of Fairport, Ohio, when drawing 18½ ft. of water, struck in the approach to Key Harbor, Georgian Bay, Nov. 4. Her cargo was lightered before she could be released. The obstruction struck is described as a flat rock with six or seven fathoms of water close to, and situated 240 ft. southeast and abreast of a black spar buoy south of Pratt Island, very close to the middle of the channel marked by the alignment of the Wedge Island range day beacons.

Canada Steamship Lines' steam tug Frank C. Barnes, which left Port Dalhousie, Nov. 1, for Montreal, has been lost with her crew of five. No word was heard of her after sailing, and every effort to trace her has failed. She was formerly owned by the Canadian Towing and Wrecking Co., Port Arthur, and was built at Manistee, Mich., in 1869, and rebuilt in 1892. She was of oak and equipped with non-condensing engine of 240 h.p. Her dimensions were, length 66 ft., breadth 16 ft., depth 8 ft., tonnage 60 gross, 43 register.

The Montreal Transportation Co. has ordered steamship of the single deck, bulk freight type, with double bottom and side ballast tanks, to be built at Collingwood, for delivery by Oct. 1, 1916. The dimensions will be: length over all, 550 ft.; length between perpendiculars, 537 ft.; breadth moulded, 58 ft.; depth moulded, 31 ft. She will be equipped with vertical triple expansion engines, with cylinders 24, 40 and 66 ins. diam., by 42 ins. stroke, supplied with steam by 3 Scotch boilers 13 by 11 ft., at a working pressure of 185 lbs.

The Nipissing-Pontiac Steamboat Co.'s s.s. *Aileen* foundered in Lake Timiskaming, Nov. 11, when en route from Haileybury to North Timiskaming. Apart from the fact that there was a stiff gale on the lake, nothing is known as to the causes of the disaster. The vessel was a small one and carried three of a crew, and one passenger, all of whom lost their lives. The *Aileen*, which was formerly owned by the Upper Ontario Steamboat Co., was built at Perth, Ont., in 1904, and was screw driven by engine of 4 n.h.p. Her dimensions were: length, 68.8 ft.; breadth, 11.8 ft.; depth, 4.4 ft.; tonnage, 38 gross, 24 register.

### British Columbia and Pacific Coast.

The Victoria Shipping Co., Ltd., Victoria, B.C., is being voluntarily wound up, with J. H. Lawson as liquidator.

The C.P.R. s.s. *Princess Victoria* was withdrawn from service during the last week of October for repairs and general overhaul. Her place on the triangular route was taken by the s.s. *Princess Charlotte*.

The C.P.R. steamship service on the Arrow Lakes will be three days a week during the winter, southbound vessels leaving Arrowhead Tuesdays, Thursdays and Saturdays, and West Robson, Tuesdays, Thursdays and Saturdays.

The Alaska Steamship Co.'s s.s. *Mariposa*, which stranded at Bella Bella, while bound from Seattle, Wash., to Alaska ports, recently, was refloated Nov. 3, and taken to McLaughlin Bay. She is reported to have been insured on a value of \$250,000.

The C.P.R. has lost its appeal at Vancouver, in a case where judgment was given against it for damage to the s.s. *Lady Lake*, when, in placing a new boiler in her, the crane slings broke and the boiler, which was also damaged, crashed through the deck.

H. Kemp, formerly Secretary-Treasurer, North Vancouver Ferries, Ltd., who sued the company recently for salary from the time of his dismissal in 1913 to Jan., 1915, has been awarded \$433 and costs, covering salary from his dismissal to his appointment to another position, as it was considered that his summary dismissal was not justified.

The Vancouver Portland Cement Co.'s s.s. *Leona* foundered in the Gulf of Georgia, Oct. 30, and seven of the crew were reported missing. She was bound for Tacoma, Wash., with ore and was caught in a heavy sea. She was built at Paisley, Scotland, in 1905, her hull being of steel, with dimensions, length 185 ft., breadth 30 ft., depth 11½ ft.; tonnage, 700 gross, 308 register.

At a meeting of representatives of financial and shipping interests in Vancouver, Nov. 5, a resolution was passed urging the Dominion Government to appoint a customs officer at New York, to deal with shipping to British Columbia ports via the Panama canal, and also urging the encouragement of the westward movement of grain for shipment through British Columbia ports.

The Alaska Steamship Co.'s s.s. *Mariposa*, which ran ashore on a reef near Napier Point in Lama Passage, off Campbell Island, Oct. 8, was floated and beached in McLaughlin Bay, where temporary repairs were made early in November, after which she proceeded to Seattle, Wash., accompanied by the tug *Salvor*, for complete examination and repairs.

The C.P.R. has filed objections to the Vancouver Harbor Commission's reclamation scheme so far as the work in False Creek is concerned, on the ground that its land on the south shore would be injuriously

...which it is claimed would be formed between the island and the ... by reason of the channel being blocked by the approach from the end of Granville St.

Capt. H. Smith, of the steam tug *Constance*, was fine \$100, at Vancouver, Nov. 5, for carrying passengers, and a further \$50 for towing a launch, in contravention of the laws regarding steam tugs. In the course of the trip during which the offences took place, the tug was lost. The captain pleaded that he was unaware that the men were on his vessel, and to back him up, he referred to his report of the loss of the vessel, where he referred to them as stowaways. The case is of considerable local interest, owing to the general practice of carrying parties of loggers on steam tugs going up for logs.

The bylaw providing for the ultimate municipalization of the ferry service at West Vancouver, operated by the West Vancouver Ferry Co., was defeated, Nov. 1. The company has not been a paying concern, and there has been constant difficulty in financing it. Immediately following the defeat of the proposed bylaw, the company reduced the service to one boat, and gave all employees one month notice. The fare was also raised 25%. It is stated that there is a strong probability that the company will cease business at the end of the 30 days notice. The position is rather a peculiar one, as all the shares are held by the municipality.

The Minister of Public Works inspected the Government works in progress in Vancouver harbor, Nov. 16. He stated that a building would be erected on the recently completed Government dock, and a wharf would be constructed in front of the immigration building, which is almost completed. The erection of other buildings at various points will come up for consideration later on. On the same day he was waited on by representatives of the Board of Trade and the North Vancouver City Council in connection with the projected dry dock, for the construction of which the Amalgamated Drydock and Shipbuilding Co. has been promised a Government subsidy.

**The Loss of the s.s. De Sola.**—The Reid Donald Steamship Co., Montreal, is suing C. Tennant and Sons Co., New York, for \$350,000 for the loss of the s.s. *De Sola*, which was destroyed by explosions and fire caused by the escape of concentrated sulphuric acid, which was being conveyed from New York to Ardrossan, Scotland, in the s.s. *De Sola* while under charter to the defendant company. The circumstances connected with the disastrous voyage were detailed in Canadian Railway and Marine World for April.

**The Loss of the s.s. Hesperian.**—When the Allan Line s.s. *Hesperian* was sunk off the Irish coast on Sept. 4, there seemed to be considerable doubt as to whether she had been the victim of a mine, or had been torpedoed by a German submarine. A press dispatch stated recently that the Navy Department at Washington had announced that a fragment found on board the vessel and removed by one of the passengers, had been definitely recognized as a part of a torpedo.

**New Russian Arctic Port.**—A recent press report from Paris, France, states a railway has been completed from Petrograd, Russia, to the harbor built recently at Ekaterina, on the edge of the Arctic circle, on the northern coast of the Gulf of Kola. The port is said to be free from ice the year round. The railway is 1,200 miles, and was built in six months by about 10,000 men, mostly war prisoners, under the direction of American engineers.

## Government Steamships on Hudson Bay Route.

Ottawa press despatch, Nov. 19 (unconfirmed): "A Government owned line of steamers out of Hudson Bay will be established, it is understood, on the completion of the line and the terminals at Canada's new northern port and will be in operation in time to carry part of the 1917 wheat crop to its destination overseas it is hoped. Work on the construction of the line is being expedited with a view to completing the laying of steel by the fall of next year. If this is done as stated, the route will be in a position to compete for the movement of the Canadian grain crop in 1917. On account of the prejudice against the route by the results of careless navigation in Hudson Bay, it is expected that insurance rates will at first be so high that it will be necessary for the Government to operate its own line of steamers. This, it may be stated, will, according to present intentions, be done."

In reference to the above we are officially advised that at present there is nothing in the report that a Government line of steamships is to be established to connect with the Hudson Bay Railway, and that the matter is entirely one for the future.

## Mainly About Marine People.

C. L. Monroe has been appointed agent, Pacific Coast Steamship Co., Prince Rupert, B.C., vice J. H. Rogers.

H. Maitland Kersey, Manager in Chief, Ocean Services, Canadian Pacific Ry., London, Eng., is in Canada on a business trip.

J. L. Michaud, A.M.Can.Soc.C.E., who died at Montreal, Nov. 14, aged 64, was for 13 years Chief Engineer, Dominion Public Works Department, there.

A. Angstrom has been appointed Naval Architect, Canadian Northern Ry., with office at Toronto. His first work is the designing and supervision of building of a car ferry to run between Steveston and Patricia Bay, B.C.

Clark Hamilton, who died at Kingston, Ont., Nov. 10, was for some years prior to 1882, when he was appointed Collector of Customs, engaged in steamboat business, and commanded the s.s. *Kingston* when the late King Edward, then Prince of Wales, sailed up the St. Lawrence in 1860.

Charles Hughes, who died at Montreal West, early in November, formed a link with the period of Lower Canada and early navigation on the St. Lawrence River. His father was agent at Three Rivers for the Molson line of steamships, and he was for some time a purser on one of those vessels.

Capt. C. T. Knowlton has been appointed Superintendent of Ferries, Canadian Government Railways, in charge of floating equipment. Employees on all floating equipment report to and receive instructions from him, and he reports to the General Superintendent, Intercolonial Ry. Office, Moncton, N.B.

Major Adolphe V. Roy, M.Can.Soc.C.E., formerly Vice President, Sincennes-McNaughton Line, Ltd., Montreal, whose death while performing a heroic action at the front was mentioned in our last issue, is stated to be amongst those recommended for the Victoria Cross. There are several precedents for such a posthumous award.

A. Gordon, at present Lieutenant-Engineer, R.N.R., of H.M.S. *Jupiter*, and formerly Chief Engineer s.s. *Princess Charlotte*, B.C. Coast Service, C.P.R., Vancouver, B.C., has been awarded the Russian Imperial Order of Ste.

Anne, third class, for services, while engaged in keeping the port of Archangel open last winter under exceptional difficulties.

Capt. J. V. Forster, R.N.R., who has been appointed General Superintendent, Canadian Pacific Ocean Services, Ltd., formed by the C.P.R. steamships and the Allan Line, Liverpool, England, spent his early years at sea in the ships *Highfield* and *Milton Stuart*. In 1889 he entered Elder Dempster and Co.'s service as second mate on the s.s. *Yola*, and three years later was given command of the s.s. *Ashanti*, and a year later transferred to the s.s. *Mount Temple*. The first two vessels were engaged in the West African trade, and the last in the Canadian trade, and it was eventually acquired by the C.P.R. when it took over the Beaver Line to form the nucleus of its fleet. In 1913 he was presented with a gold watch and chain by the President of the United States for services rendered in rescuing the crew of the schooner *Percy* and *Lily* when the vessel foundered in mid-ocean. He succeeded Capt. H. Mowatt as Marine Superintendent, C.P.R., at Liverpool in 1913.

**Emigration and Military Service.**—Various reports have been cabled from England recently, as to the large numbers of men of military age, who are emigrating from Great Britain and Ireland, with a view to avoid possible compulsory military service. Enquiry at the Canadian Emigration Office, London, England, proves that so far as Canada is concerned, there is no truth in the reports, as from the commencement of the war, emigration has been discouraged, and enquiries from men of military age do not average six a month. This policy is strictly followed out also at the C.P.R. and G.T.R. offices; in fact, if a young man of service age makes such enquiries, he is referred to a recruiting sergeant.

**The Regional Construction Co., Ltd.**, has been incorporated under the Dominion Companies Act, with \$100,000 authorized capital and office at Montreal, to carry on business as contractors and builders of railways, telegraph, telephone and transmission lines, canals, bridges, wharves and all kinds of public works. The incorporators are C. G. Hebert, A. Laberge, E. H. Godin and J. E. Morier, Montreal, and E. Lambert, St. Jacques des Piles, Que.

**The Hillsborough Plaster, Quarrying and Manufacturing Co.** has been incorporated under the New Brunswick Companies' Act to build railways, aerial and other tramways, to be operated by steam, electricity or other power, in connection with its quarries. The company has a capital of \$49,000; its office is at Hillsborough, N.B., and its provisional directors are:—J. Blight, Mrs. I. C. Blight, J. L. Peck, C. W. McLatchy, Hillsborough; J. N. Smith, Coverdale, N.B.

**The Imperial Oil Co.** has been granted a supplementary charter under the Dominion Companies Act, authorizing it to increase its capital stock from \$15,000,000 to \$50,000,000, and to extend its powers in various directions, including the power to lease or otherwise acquire railways necessary for its purposes, and to lay tracks on lands owned by it, and to own rolling stock.

**Quinlan and Robertson, Ltd.**, contractors, Montreal, originally incorporated with \$2,000,000 authorised capital, have had it reduced to \$1,000,000 by supplementary letters patent issued under the Dominion Companies Act.

Already 300 miles of the 1,000 miles of railway across Australia, recommended by Lord Kitchener during his visit to the Commonwealth, for strategical purposes, has been built; and it is expected that the line will be finished by the end of 1916.

### Among the Express Companies.

The Board of Railway Commissioners has approved the Central Canada Ex. Co.'s standard mileage tariff of maximum tolls C.R.C.I.

Since the commencement of the war, 55 employees of the Dominion Ex. Co., in Manitoba and Saskatchewan have enlisted for active service.

The Canadian Northern Ex. Co. has opened offices at Rosebank, Man., Krydor, Canora, Mazenod, Mikado and Spring Valley, Sask.

F. Robertson, a former agent for the Dominion Ex. Co., at Windsor, Ont., has recently pleaded guilty, with extenuating circumstances, to the theft of \$615 from the company.

The Dominion Ex. Co. has opened offices at Mason, Two Creeks and Meadows, Man.; Alida, Vidora, Belbeck, Beverly, Archive and Blucher, Sask.; Lomond, Purple Springs and Whitla, Alta., and Rock Creek, B.C.

The Board of Railway Commissioners has approved the Canadian Northern Ex. Co.'s standard tariff of maximum express tolls, C.R.C. 834, to apply on the C.N.R.'s Mountain Division, west of Tollerton, Alta.

The Rochon Express Co., Ltd., has been incorporated under the Quebec Companies Act, with \$20,000 capital and office at Montreal, to transport merchandise on vehicles and vessels of all kinds, and to carry on a general express and transportation business.

H. H. Hines, agent, Jas. Todd, cashier, Canadian Ex. Co., Parkdale, Toronto, and W. Ellis, were each sentenced to one month imprisonment at Toronto, Nov. 10, for the theft of \$2,140 from the company, by the manipulation of rates. The money obtained has been refunded.

Canadian Ex. Co.'s results for the year ended June 30, compared with those for the previous year are as follows:—

	1914-1915.	1913-1914.
Charges for transportation	\$3,117,113	\$3,341,340
Express privileges, Dr.	1,554,427	1,666,472
Operating other than transportation	60,570	114,732
Total operating revenue	1,623,255	1,789,599
Operating expenses	1,536,528	1,661,834
Net operating revenue	83,726	127,765
Express taxes	51,948	28,949
Operating income	31,677	38,816

Central Canada Express Co., Ltd., has been incorporated under the Dominion Companies Act, with \$100,000 authorised capital and office at Winnipeg, to transport for hire to and from places in Canada and elsewhere, merchandise and money, etc., and for such purposes to own, charter and operate steam and other vessels, cars and vehicles, and to carry on the general business of an express company. The incorporators are J. D. McArthur, President; D. W. Campbell, Assistant Secretary-Treasurer, Edmonton, Dunvegan and British Columbia Ry., and Central Canada Ry.; and W. P. McDougall and A. B. Donley, Winnipeg, and J. K. McLennan, Secretary-Treasurer, Edmonton, Dunvegan and British Columbia Ry., and Central Canada Ry., Edmonton, Alta. Peter McArthur has been appointed General Superintendent, with office at Edmonton, Alta.

### Telegraph, Telephone and Cable Matters.

The Great North Western Telegraph Co. has taken an office in the Northern Crown Bank Building, Regina, Sask., and is making additions to its equipment there.

The Dominion Government telegraph line across Hastings Arm, Observatory Inlet, B.C., has been replaced by a cable from Larcom Island to the main land at approximately the same point as the wire, which has been removed.

The C.P.R. Telegraphs has opened a branch telegraph office at 2115 Granville St., Vancouver, B.C., for handling business from the West Fairview, Kitsilano and False Creek districts.

During a heavy storm throughout the Maritime Provinces, Nov. 5 and 6, telegraph business suffered considerable dislocation, in fact all the companies operating overhead wires had to keep large gangs of men out for some time repairing wreckage.

Subsequent to the annual meeting of Grand Trunk Pacific Telegraph Co. shareholders at Montreal recently, details of which are not made public, H. Hulatt, Manager of Telegraphs, G.T.R. and Grand Trunk Pacific Ry., was elected a director of the company.

Referring to the report mentioned in Canadian Railway and Marine World for November, to the effect that G. D. Perry, General Manager, Great North Western Telegraph Co., had stated in Vancouver that his company purpose stringing a double copper line between Montreal and Vancouver for commercial business, we are officially advised that his statement was misinterpreted. It was stated that if it had not been for the heavy advance in the price of copper, the company would probably have erected a copper wire between Montreal, Toronto and Vancouver. With the present prices prevailing, the cost of the wire would be about \$275,000, and the total expense about \$300,000. The proposition is therefore held over for the present, and it is unlikely that any action will be taken until the copper market becomes normal.

The Grand Trunk Pacific Telegraph Co. has been appointed Supervisory Agent of telegraphs for the National Transcontinental Ry. between Moncton, N.B., and Winnipeg, including the Lake Superior Branch to Fort William, Ont., with jurisdiction over all matters appertaining to the construction and maintenance of telegraph and telephone lines and the operation of railway and commercial telegraphs, the following officers having jurisdiction:—H. Hulatt, Manager of Telegraphs, G.T.R. and G.T.P.R., and Thomas Rodger, Supervisor, G.T.R., Montreal, and F. T. Caldwell, Division Superintendent of Telegraphs, G.T.P.R., Winnipeg.

The Great North Western Telegraph Co. has opened offices at Agate, Banning, Bolger, Caledonia, Capreol, Devlin, Dorion, Fire River, Foleyet, Glenorchy, Hillsport, Hornepayne, Huronian, Jellicoe, Longueac, Mille Roches, Nipigon, Oba, Orient Bay, Ruel, Stackpool and Strathcona, Ont.; Badger, Berton, Deloraine, Lorette, Neelin, Rosebank and Vista, Man.; Birdview, Canwood, Chandler, Dumblane, Estevan, Ettington, Mazenod, Mikado, Palmer, Parkside, Parry, Richard, St. Gregor, Spring Valley and Yorkton, Sask.; Excel, Rumsey and Sibbald, Alta.; and has closed its offices at Little Metis Beach, Manoir Richelieu, Pointe au Pic and Valcartier Camp, Que.; Bala Park, Bobcaygeon, Camden East, Chaffey's Locks, Deux Rivieres, Dwight, East Don, Grimsby Beach, Hagersville, Mackeys Station, Mat-tawa, Port Cockburn, Rosseau, Sparrow Lake and Stonecliff, Ont.; and at Sarcee Camp, Calgary, Alta. The names of the following offices have been changed, Shawinigan Jct., Que., to Aldred; Laframboise, Ont., to Alfred Centre, and Mayflower, Ont., to Flanders.

Over 500,000 lbs. of fresh halibut were landed at Prince Rupert, B.C., recently in two days, according to a press dispatch. Seventeen carloads of the fish were sent east on two Grand Trunk Pacific trains.

Furness, Withy and Co., Ltd., have declared a dividend of 2½% for the quarter ended Sept. 30.

### Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

**Canadian National Carbon Co., Ltd.**—J. M. Spangler, formerly with the Railroad Supply Co., Chicago, is now connected with the Canadian National Carbon Co.'s sales department.

**The Trolley Supply Co.**, Canton, Ohio, has issued a bulletin describing and illustrating The Perfect Headlight for interurban cars, which is made entirely from 20 gauge pressed steel, the reflector being 12 ins. in diameter in the front and 6 ins. deep.

**Northey-Simmen Signal Co., Ltd.**—Supplementary letters patent have been issued under the Ontario Companies Act, reducing this company's capital stock from \$5,200,000 to \$1,160,000. The company is to be merged with the newly incorporated Diaphone Signal Co., Ltd.

**Goldschmidt Thermit Co.**—The issue of Reactions for the third quarter of the year describes a number of interesting repairs carried out by the thermit welding process, both in railway and marine shops, and an article comparing the results of welding by thermit and by electricity, as adapted to locomotive frames and other heavy sections.

**The Coleman Fare Box Co., Ltd.**, Toronto, has received orders recently for its new No. 4 stationary fare box from the Three Rivers Traction Co., Three Rivers, Que.; Toronto Civic Car Lines; Sandwich, Windsor & Amherstburg Ry., Windsor, Ont.; and Guelph Radial Ry., Guelph, Ont.; and for portable boxes from the Sudbury-Copper Cliff Suburban Electric Ry., Sudbury, Ont.; and the St. John Ry., St. John, N.B.

**The Diaphone Signal Co., Ltd.** has been incorporated under the Dominion Companies Act, with \$825,000 authorized capital and office at Toronto, to manufacture and deal in all kinds of signal devices and with other powers. The company will absorb the businesses of the Northey-Simmen Signal Co., Ltd., Diaphone Signal Co., a New Jersey corporation, the Canadian Fog Signal Co., Ltd., and Northey-Plummer Ltd., of which J. P. Northey, of Toronto, is President.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared, and no reasonable expense considered too great that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing, and manufacturing concerns, and by responsible and worthy financial, fiduciary, and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

OFFICES IN CANADA: Halifax, N.S.; Hamilton, Ont.; London, Ont.; Montreal, Que.; Ottawa, Ont.; Quebec, Que.; St. John, N.B.; Toronto, Ont.; Vancouver, B.C.; Calgary, Alta.; Edmonton, Alta.; Winnipeg, Man.; Victoria, B.C.

THOS. C. IRVING,  
Gen. Man. Western Canada, Toronto.

**CANADIAN PACIFIC RAILWAY COMPANY****Dividend Notice.**

At a meeting of the Board of Directors, held to-day a dividend of two and one-half per cent. on the Common Stock for the quarter ended 30th September last, being at the rate of seven per cent. per annum from revenue and three per cent. per annum from Special Income Account, was declared payable on 31st December next, to Shareholders of record at 3 p.m. on 30th November instant.

By order of the Board,

W. R. BAKER, Secretary.

Montreal, 8th November, 1915.

**NOTICE.**

The General Railway Signal Company of the United States of America, the owner of the exclusive rights to Canadian patents No. 92323, No. 93127, No. 96256, and No. 97758, issued to Young and Townsend, and covering methods of signalling electrified railways, wishes to call the attention of all possible users of the devices and systems covered by such patents to the fact that it is prepared to sell and furnish, at short notice, all such devices and to install such systems upon any railway in the Dominion of Canada.

All inquiries regarding the above should be addressed to The General Railway Signal Company of Canada, Limited, Lachine, Province of Quebec, Canada.

# Flange Lubrication Should be Automatic

Flange lubrication to be efficient should be automatic, absolutely independent of your engineer, and at the same time the device itself should be so simple and yet so accurate that it will be practically trouble proof. The

## Detroit Automatic Flange Lubricator (Pendulum Type)

is absolutely automatic and at the same time simple. It is all in the pendulum. Any lateral movement of the locomotive causes the pendulum to swing. This oscillation rotates, rocker-like, the pendulum shaft, which produces alternating strokes of the two plungers in the pumping unit.

The use of the Detroit Automatic Flange Lubricator insures positive lubrication just when it is needed. May we send booklet F-O 81? It contains all the facts as well as drawings. Write to-day.

London, E.C., Eng. . . . . 36 New Broad St.

# The "National" Truck

A well built engine gives this truck the power to go anywhere a load can be pulled.

NATIONAL trucks are built for severe service and are able to travel over sand, mud, snow, hills and rough country that is impassable to other types of motor trucks. Note particularly the following construction details :

**MOTOR** Waukesha, cast in pairs, 4-cylinder. Bore 2 ton  $4\frac{1}{4}$  ins.,  $3\frac{1}{2}$  ton  $4\frac{1}{2}$  ins; stroke, 2 ton  $5\frac{3}{4}$  ins.,  $3\frac{1}{2}$  ton  $5\frac{3}{4}$  ins.

**STEERING GEAR** is of the Worm and Nut, fore and aft type, the trunion shaft carrying the Pitman arm is of heat-treated, nickel steel,  $1\frac{1}{2}$  ins. in diameter.

**FRONT AXLE** Timken 2 x 3 ins., 1-beam section.

**REAR AXLE** is the well-known Timken, David Brown worm drive. The driving strain is taken through radius rods attached to rear axle and frame.

**SPRINGS** are semi-elliptic front and rear, and are of silico-manganese steel, self lubricated. Front springs are 48 x 3 and rear springs are 52 x 3. All spring-eyes punched.
